

Press release 2/2019

2019-04-01

“Hungry for innovation” takes centre stage at the BAUER KOMPRESSOREN booth at the 2019 HANNOVER MESSE trade show

Making their debut at the trade show are the compact yet ultra-high-performance GIB 26.12 SP system and the brand-new PE-VE Series. All new BAUER products feature BAUER’s hallmark premium quality combined with maximum efficiency. B-DETECTION PLUS, the new state-of-the-art gas measurement system, is also premiering at this year’s Hannover Messe.

New: The GIB 26 SP is a sleek, smart piston and air-end combination in a compact package that delivers high F.A.D. volumes.

When cost-effectiveness or limited space are critical factors, high-pressure compressors that deliver top performance from a compact footprint are the answer.

However, conventional high-pressure models are unlikely to fulfil these requirements.

The new BAUER SP Series offers the ideal solution. The series combines a BK 26 Series advanced high-pressure compressor block with a ROTORCOMP EVO®. The air end supplies air or gas at the intake pressure, which is then compressed to the defined final pressure by the high-pressure block.

This design enables BAUER’s SP systems to deliver extremely high F.A.D. rates despite their ultra-compact design. All technology used in the SP system is developed within the BAUER GROUP.

The perfect combination for a high-performance, compact compressor solution.
