GENERAL DESCRIPTION

Document: MDCV-1-Apr 2013

Hydraulic valve RM20 provides change of fluid flow direction, hydro-systems pressure restriction, pump unloading in neutral position of the spools. The valve RM20 is designed to be integrated in hydraulic systems of Mobile and Industrial Machines.

The valve assembly consist of:

A body with integrated relief and check valve, spool, control and spring-centering group of the spool. The valve RM20 provides direct passing of the flow from the pump line to the tank at neutral position (open center). Options "closed centre" and "carry over" are possible with additional adapters. There is different control options: spring-centering in "neutral" position, detent, automatic kick-out, hydraulic and electro-hydraulic control.

TECHNICAL DATA

Rated flow 20 l/min

P=250 bar; T=30 bar; A,B= 250 bar Max. pressure

±3,5 mm Spool stroke Working temperature range -15...+80 °C

Working liquid hydraulic oil HLP DIN51524

Liquid viscosity 15...300cSt

Nominal filtration ISO4406: 19/16 (recommended filter element - 0,025mm mesh)

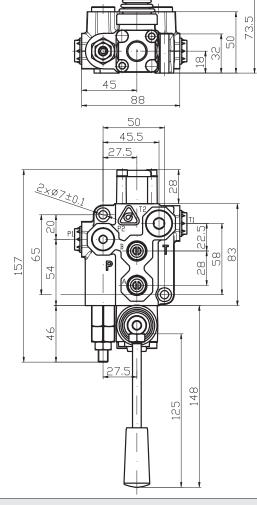

Internal leakage at 120 bar,

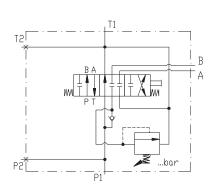

t=40°C and viscosity 46cSt

max. 8cm³/min; max 2cm³/min (special version) Actuating force less than 150N

Weight 1,7kg

DIMENSIONS

We reserve the right to change specifications without notice.

GENERAL DESCRIPTION

Hydraulic valve RM35 provides change of fluid flow direction, hydro-systems pressure restriction, pump unloading in neutral position of the spools. The valve RM35 is designed to be integrated in hydraulic systems of Mobile and Industrial Machines.

The valve assembly consist of:

A body with integrated relief and check valve, spool, control and spring-centering group of the spool.

The valve RM35 provides direct passing of the flow from the pump line to the tank at neutral position (open center). There is different control options: spring—centering in "neutral" position, detent, automatic kick-out, hydraulic and electro-hydraulic control.

TECHNICAL DATA

Rated flow 35 I/min

Max. pressure P=250 bar; T=50 bar; A,B= 300 bar

Spool stroke ±6 mm
Working temperature range -15...+80 °C

GENERAL DESCRIPTION

Hydraulic valve RM40P provides change of fluid flow direction , hydro-systems pressure restriction , pump unloading in neutral position of the spools. The valve RM40P is designed to be integrated in hydraulic systems of Mobile and Industrial Machines.

The valve assembly consist of:

A body with integrated relief and check valves, spools, control and spring-centering group of the spools. The valve RM40P provides parallel distribution of the working liquid and direct passing of the flow from the pump line to the tank at neutral position (open center). Options "closed centre" and "carry over" are possible with additional adapters. There is different control options: spring–centering in "neutral" position, detent, automatic kick-out, hydraulic and electro-hydraulic control.

GENERAL DESCRIPTION

The directional control valve RMD90 provides a change of fluid flow direction in the channels of the hydraulic system. Valve RMD90 is designed for mounting in the hydraulic systems of the mobile and industrial machines.

TECHNICAL DATA

Weight 5.7kg
Nominal flow 90 l/min
Maximal flow 150 l/min
Nominal pressure 16 MPa
Maximal pressure 20 MPa
Working stroke of the spool ±8 mm

Spool leakage at p=100bar t=40°C and viscosity 36cSt

Working fluid-hydraulic oil

with parameters:

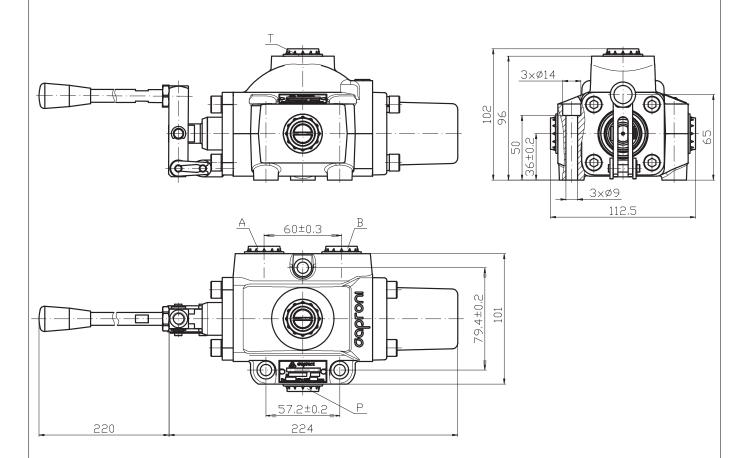

25 cm³/min

viscosity - 15...300cSt

recommended viscosity - 20...80cSt

temperature - -20...+80°C degree of filtration - 0,025mm

GENERAL DESCRIPTION

- 1. The valve type MRP 70 incorporates the features of a 4-way directional control valve, an adjustable full range pressure compensated by-pass type flow control valve and a pilot operated pressure relief valve all in one compact package.
- 2. Less fittings and plumbing, eliminates leakage points.
- 3. Fine positive metering is possible in either direction with one manually adjustable, infinitely variable lever controlling both direction and amount of flow. Amount of flow is proportional to movement of the lever.
- 4. Flow is constant regardless of pressure variations , thus flow out the work port remains smooth and constant regardless of changes in load conditions.
- 5. An externally adjustable pilot relief is standard.
- 6. Friction detent (Friction positioner kit).
