![crosser — STREAMING ANALYTICS FOR ANY EDGE, FOG OR CLOUD]

Crosser Edge Director

Node Orchestration

Live Test View - Debug and test your Flow on remote Live Nodes before mass-deployment.

Dynamic Module Deployment - Automatically load only the modules used in a flow.

Flow version control - A deployed Flow can´t be changed. A new version is required.

Sensor Tag Management - Simplifies the selection and ongoing management of high volume of sensor tags.

Credentials Catalog - Enter your Cloud, SaaS and Enterprise system Credential once and reuse them for new flows.

Resource Catalog - Create resources like Tag Lists, ML models, Python/C# scripts and Data Mapping Templates and reuse them in your Flows.

Custom Module Management - Build and deploy your own custom modules. Reuse them in multiple Flows.
