

## Rotary Distributors

Hydraulic rotary distributors for the use of various liquid and gaseous media are an important part of the product range. In special designs, devices with up to 44 channels and operating pressures up to 400 bar are designed and manufactured. The rotary distributors are equipped with special Hunger DFE rotor seals for hydraulic oils, greases, gases, water and other operating media.

Applications for slow rotary and swivel movements with circumferential speeds of up to 2.0 m/sec are just as feasible as high-speed applications with speeds of up to 10 m/sec.
