- Mounting technology
- Cylinders
- Pumps
- Systems technology
- Fluidengineering
- Engineering Support

Sales organisation:

The sale of HYDAC products is via our own sales branches with distribution centres and via sales partners worldwide.

Customer structure:

HYDAC products are to be found in almost all sectors of industry. The wide product range reaches from mechanical engineering, process technology, the mobile sector, energy technology, to applications in the offshore sector, aviation automotive/automotive supplier and environmental technology.

Company philosophy

All HYDAC divisions are focused on world market requirements. The requirements of the market and their rapid achievement are the basis of our business activities and influence the action of each individual member of staff.

A product and result-orientated company structure, with its divisions and a high degree of delegation of responsibility, produces the very best organisational and technical qualifications in our staff. This allows them to fully recognise and understand the market requirements and to translate the knowledge gained into market-orientated products by the most direct and effective route.

This form of organisation guarantees the fastest link between market and product.

Research and development:

HYDAC invests annually approx. 5 % of turnover in R&D activities. As well as developing new innovative products we are also constantly improving on current technology. The company's own research and development work is complemented by the exchange of technology with institutes and universities.
