use cases

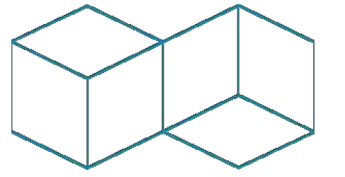

AR Placing

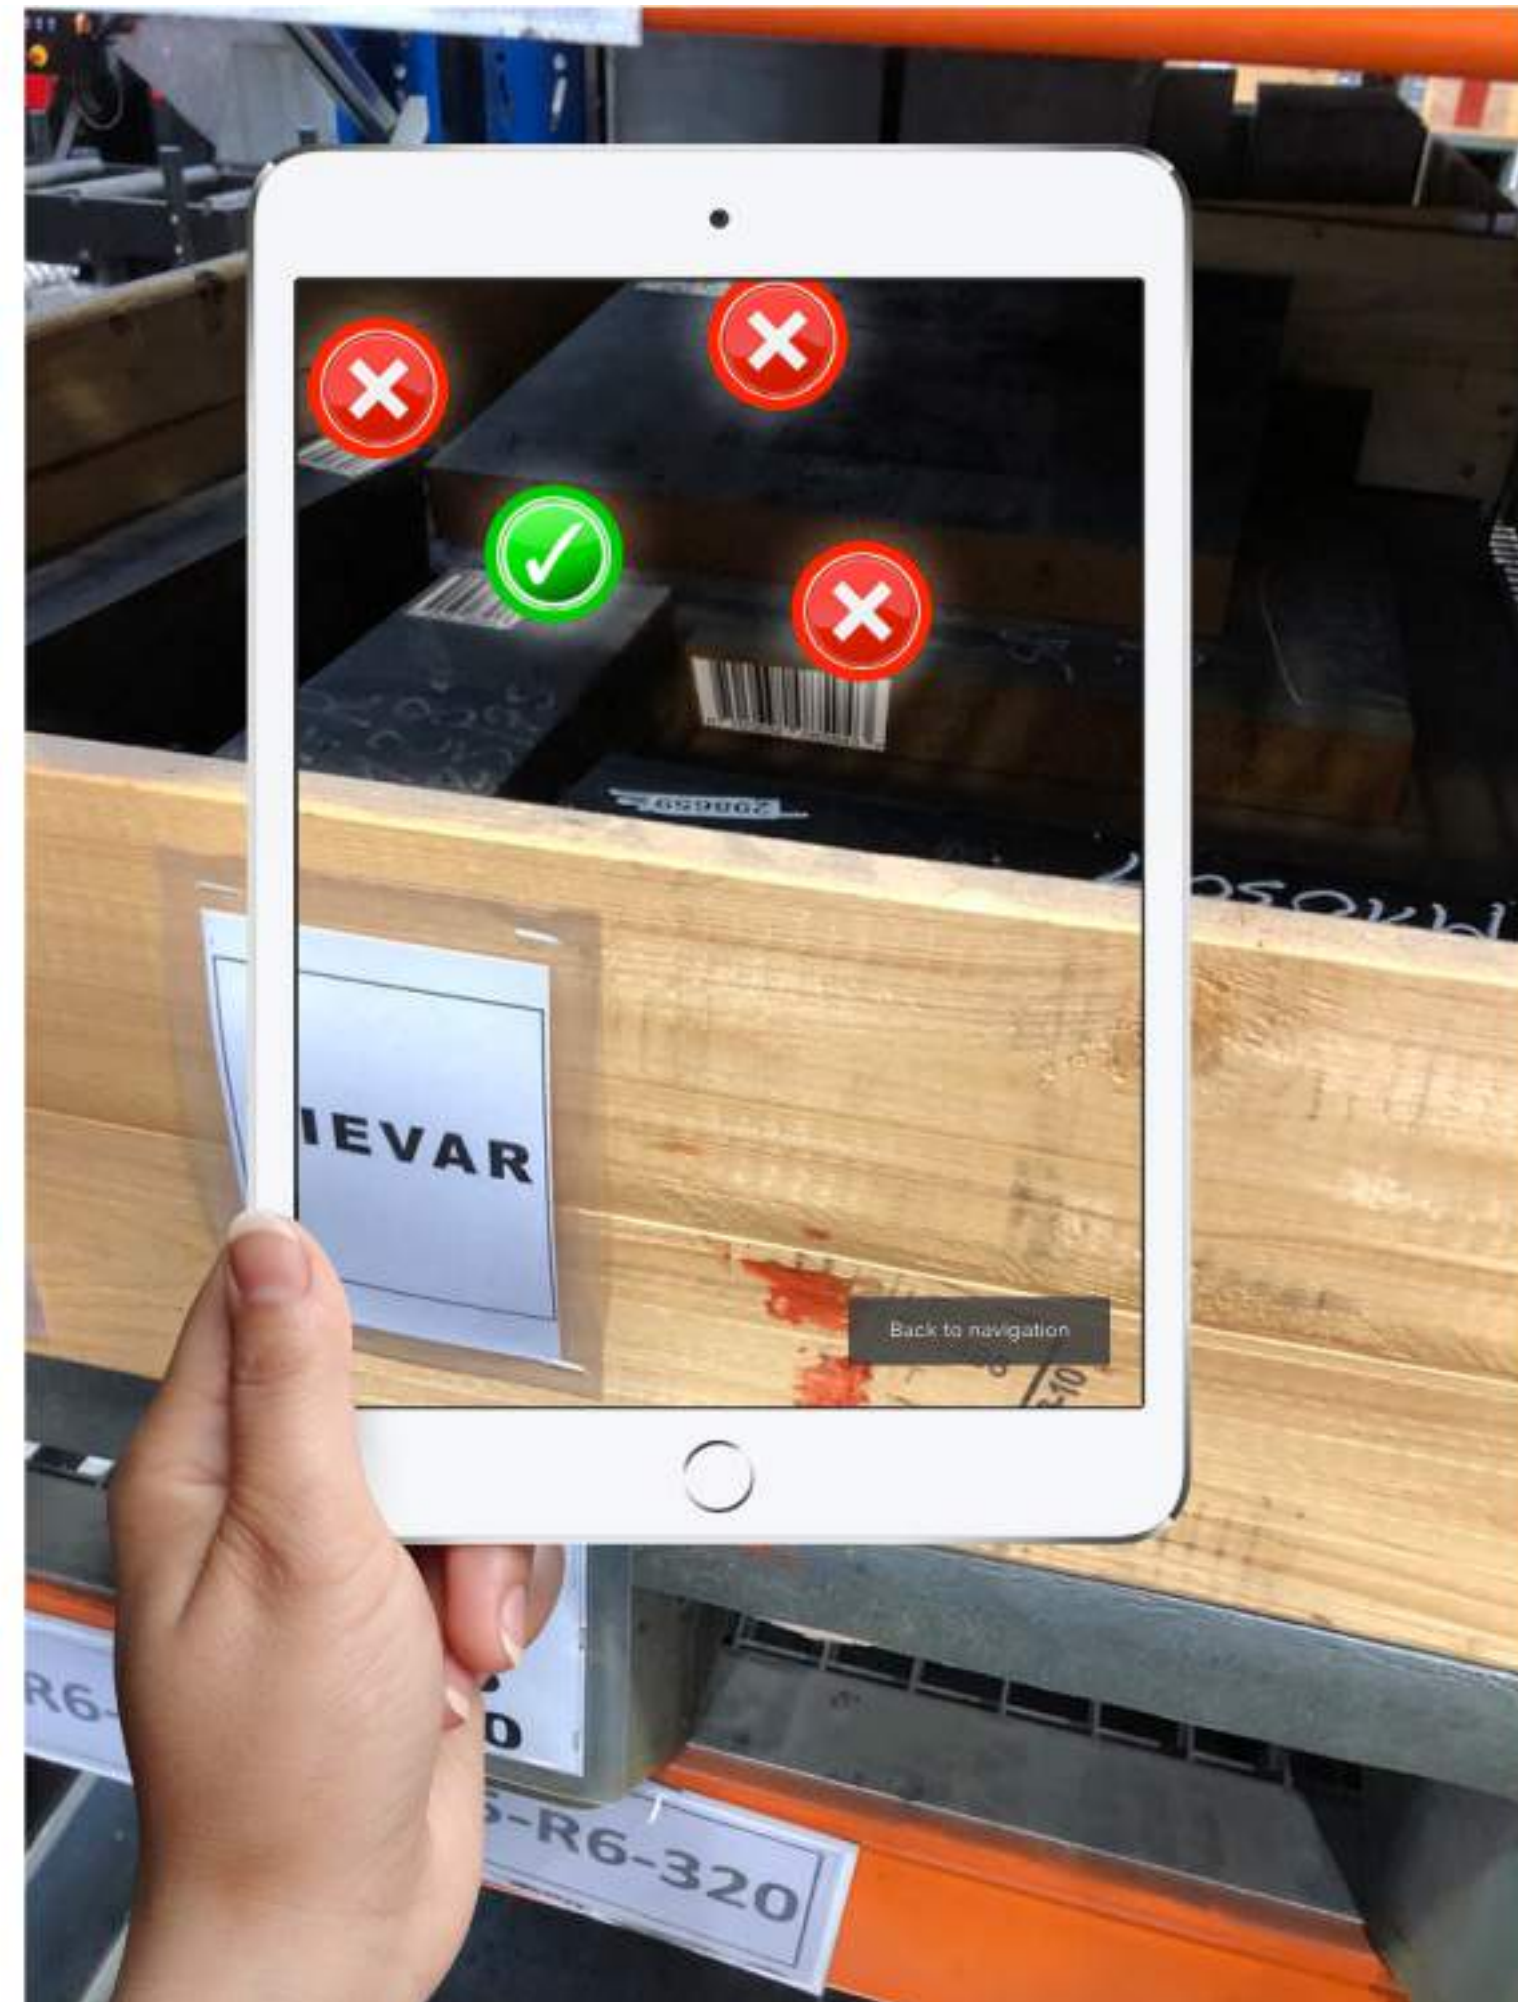

Client systems (eg SAP) determines which product from which position to pick and with INS the worker gets directly navigated to...

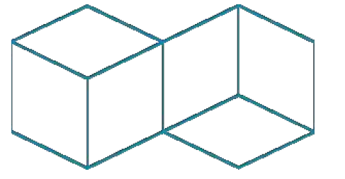

AR Placing and Picking

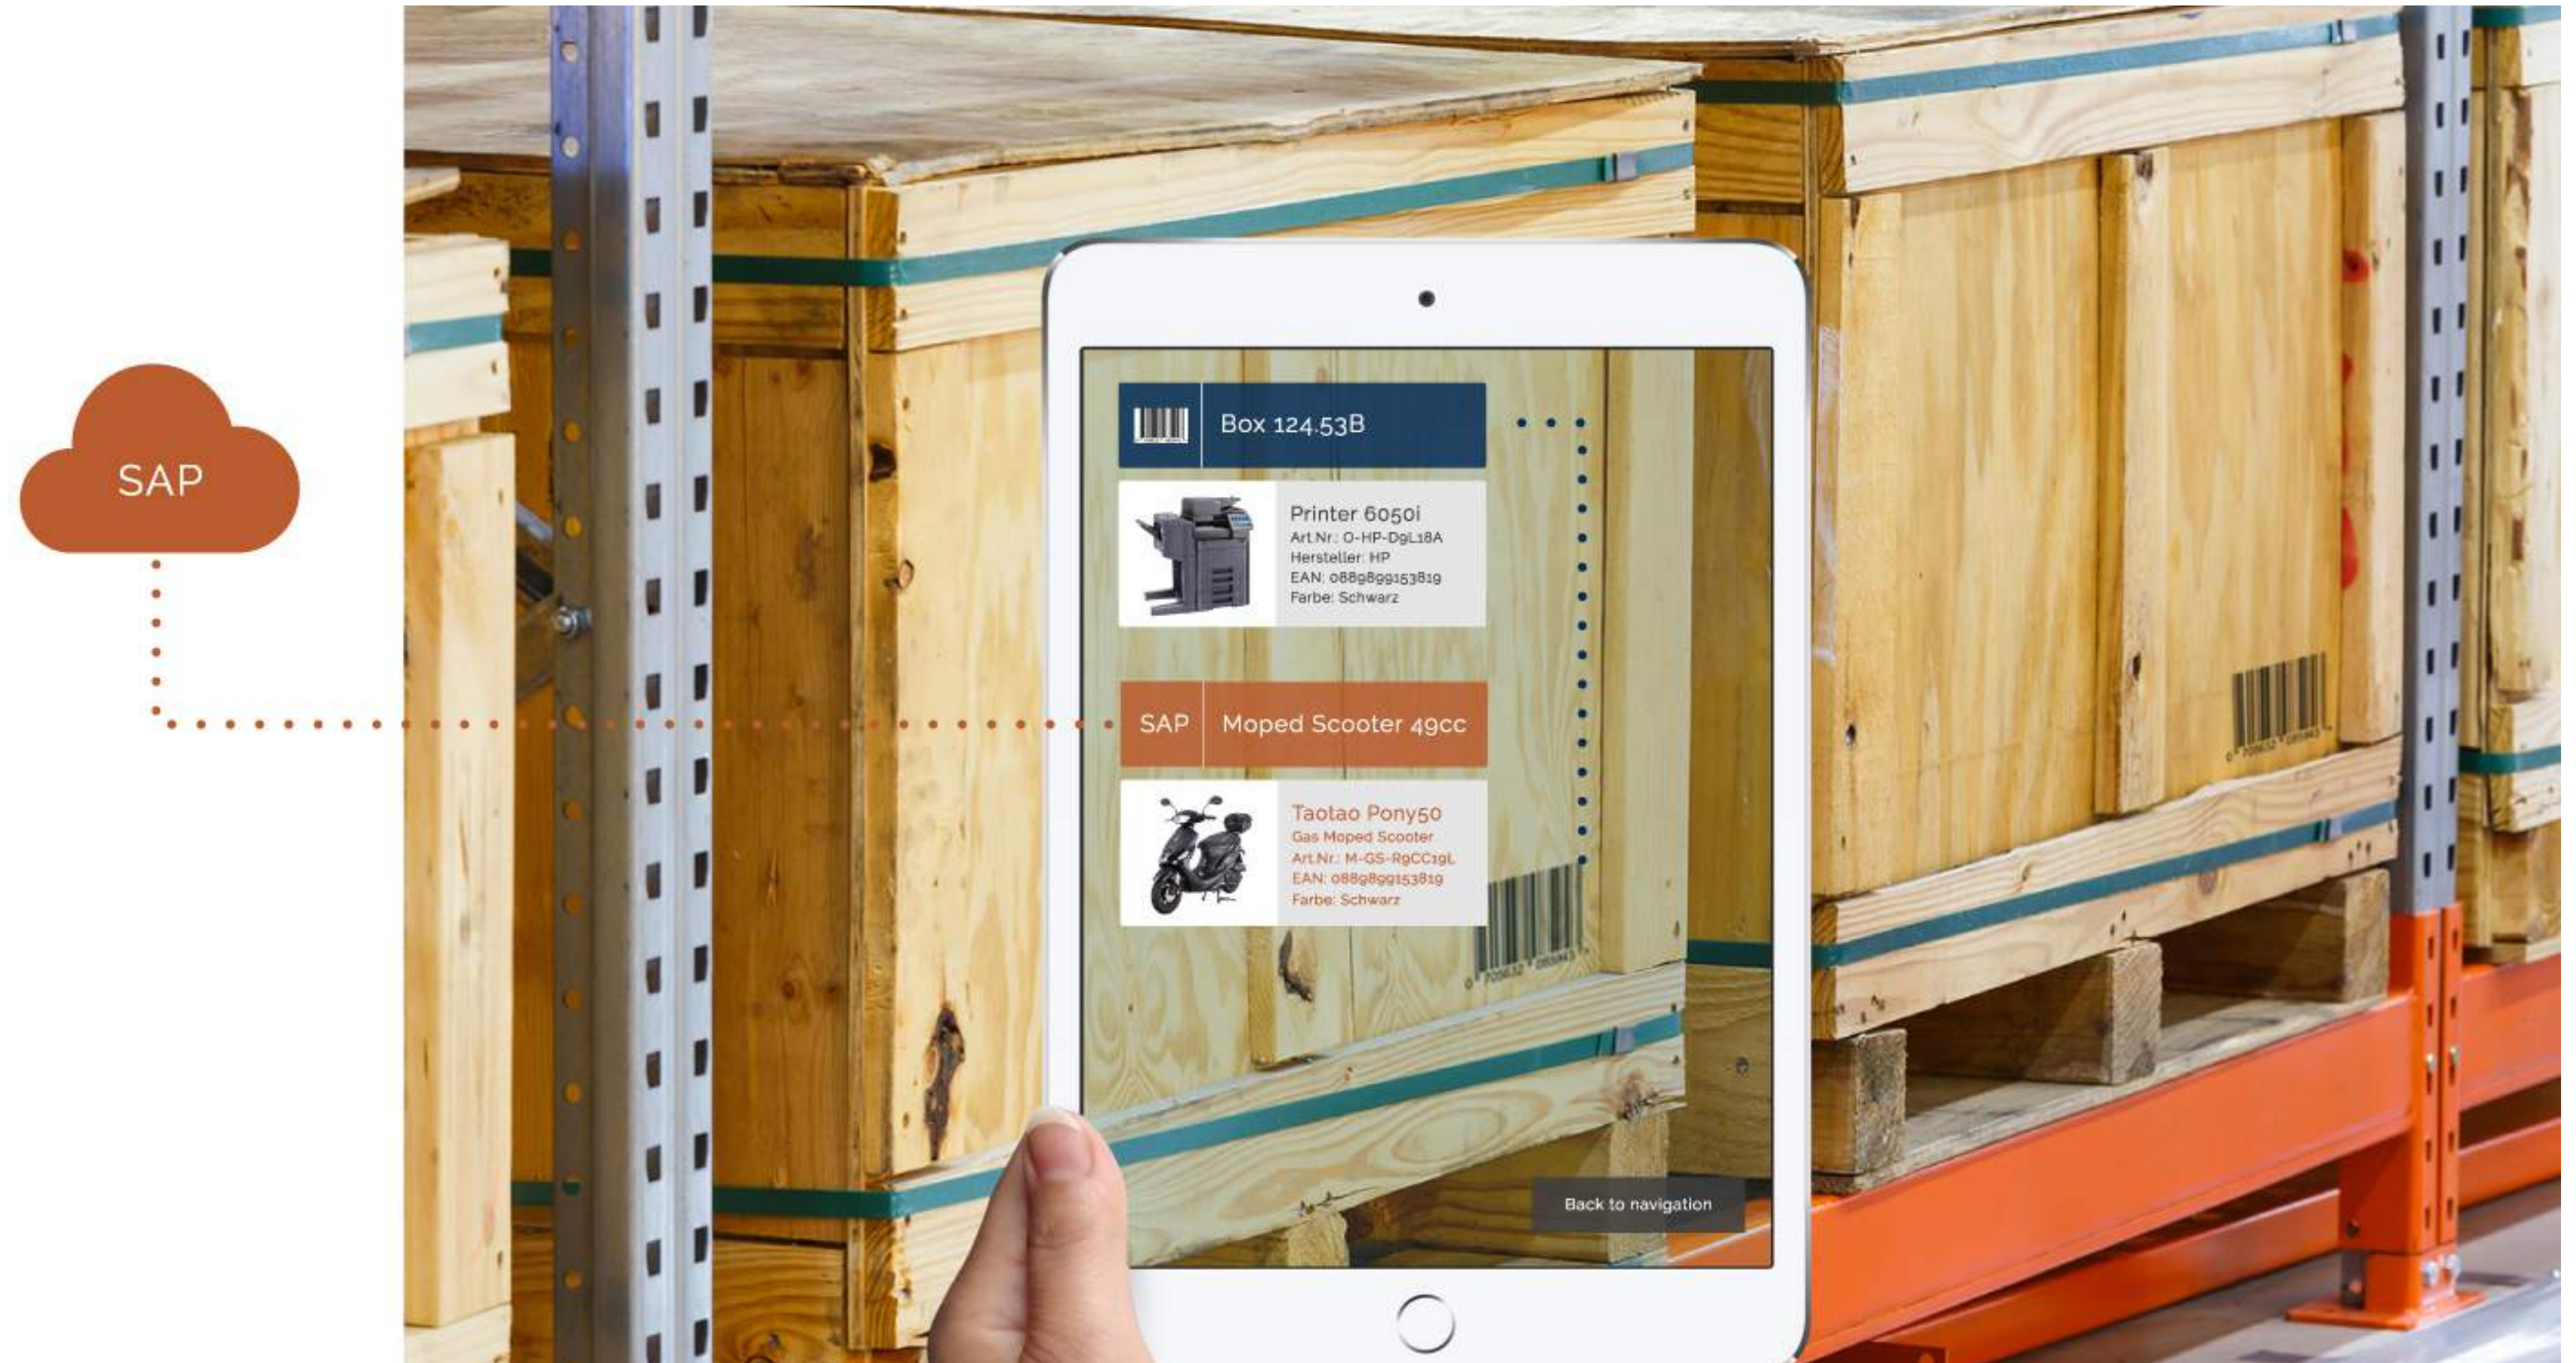

... when the worker arrives an AR barcode scanner directs the worker to the right product. This speeds up the processes and gives a first quality assurance.

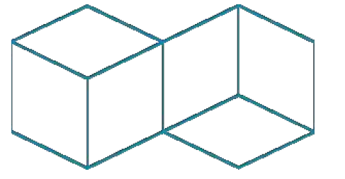

AR Inventory

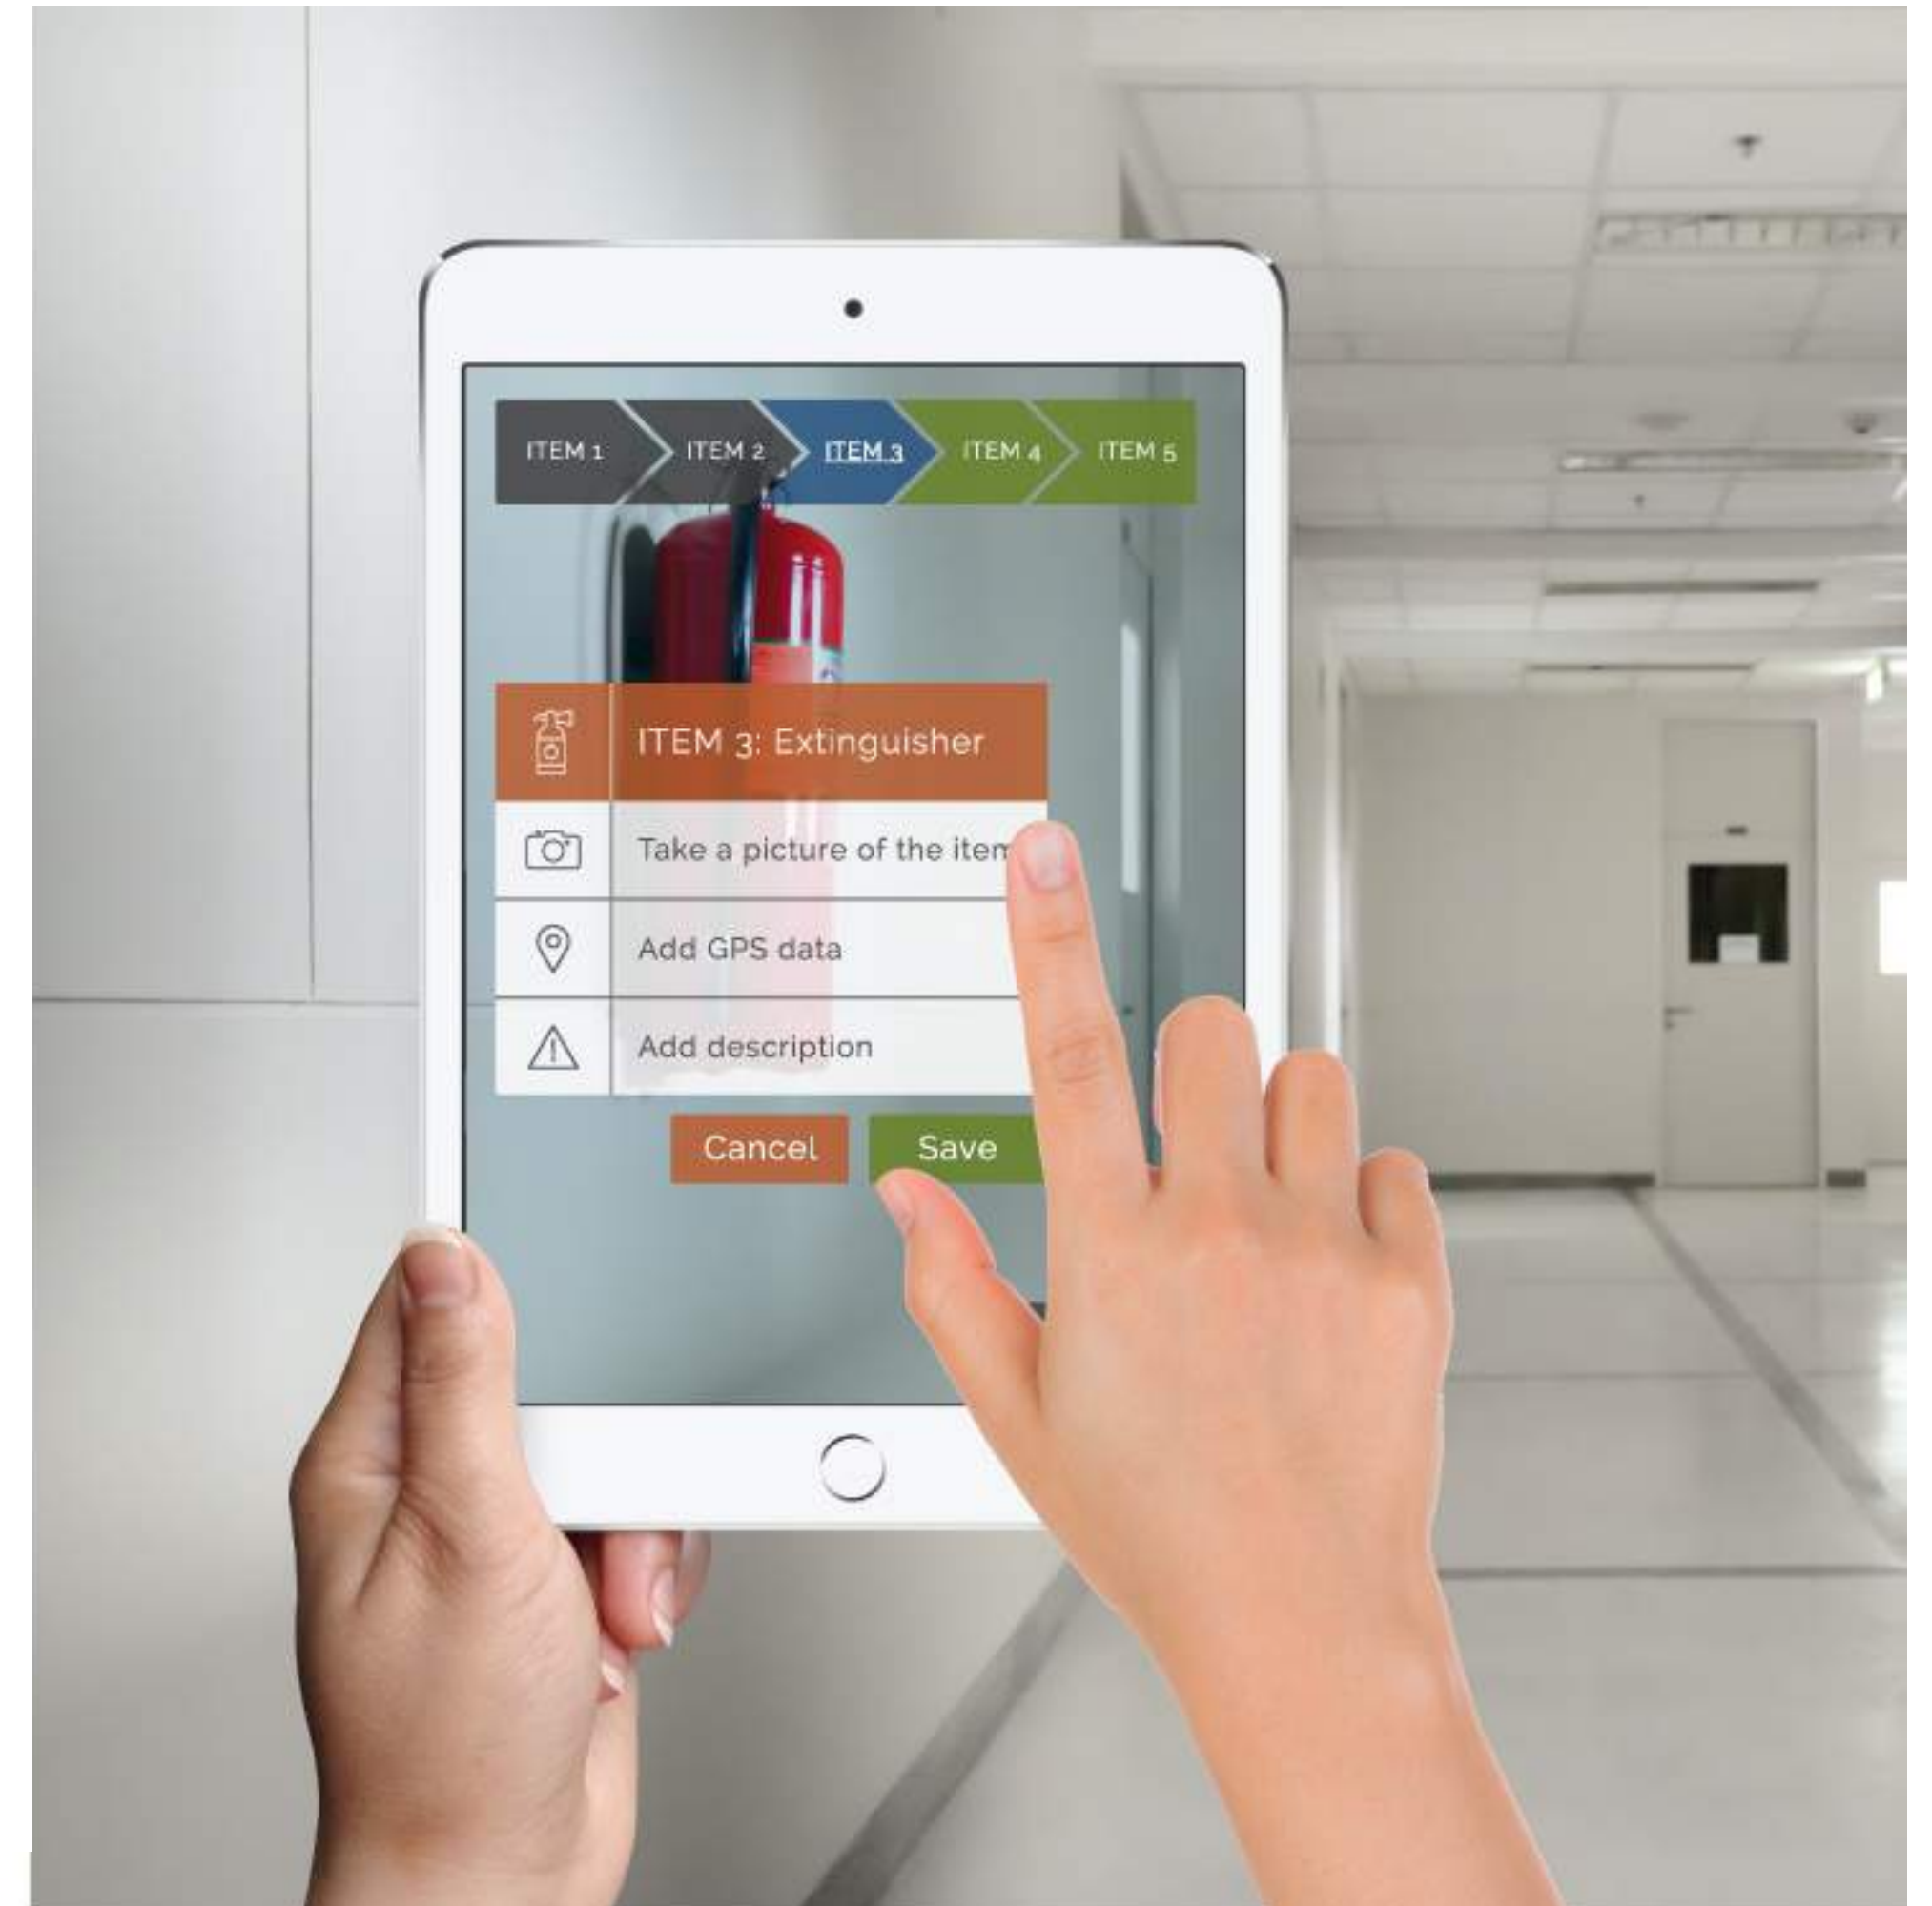

... based on the position of the mobile device the worker sees SAP information of the position and due the barcode of the actual product the information

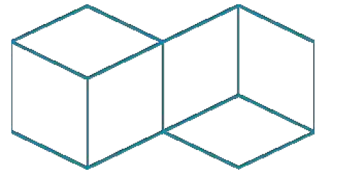

AR Maintenance

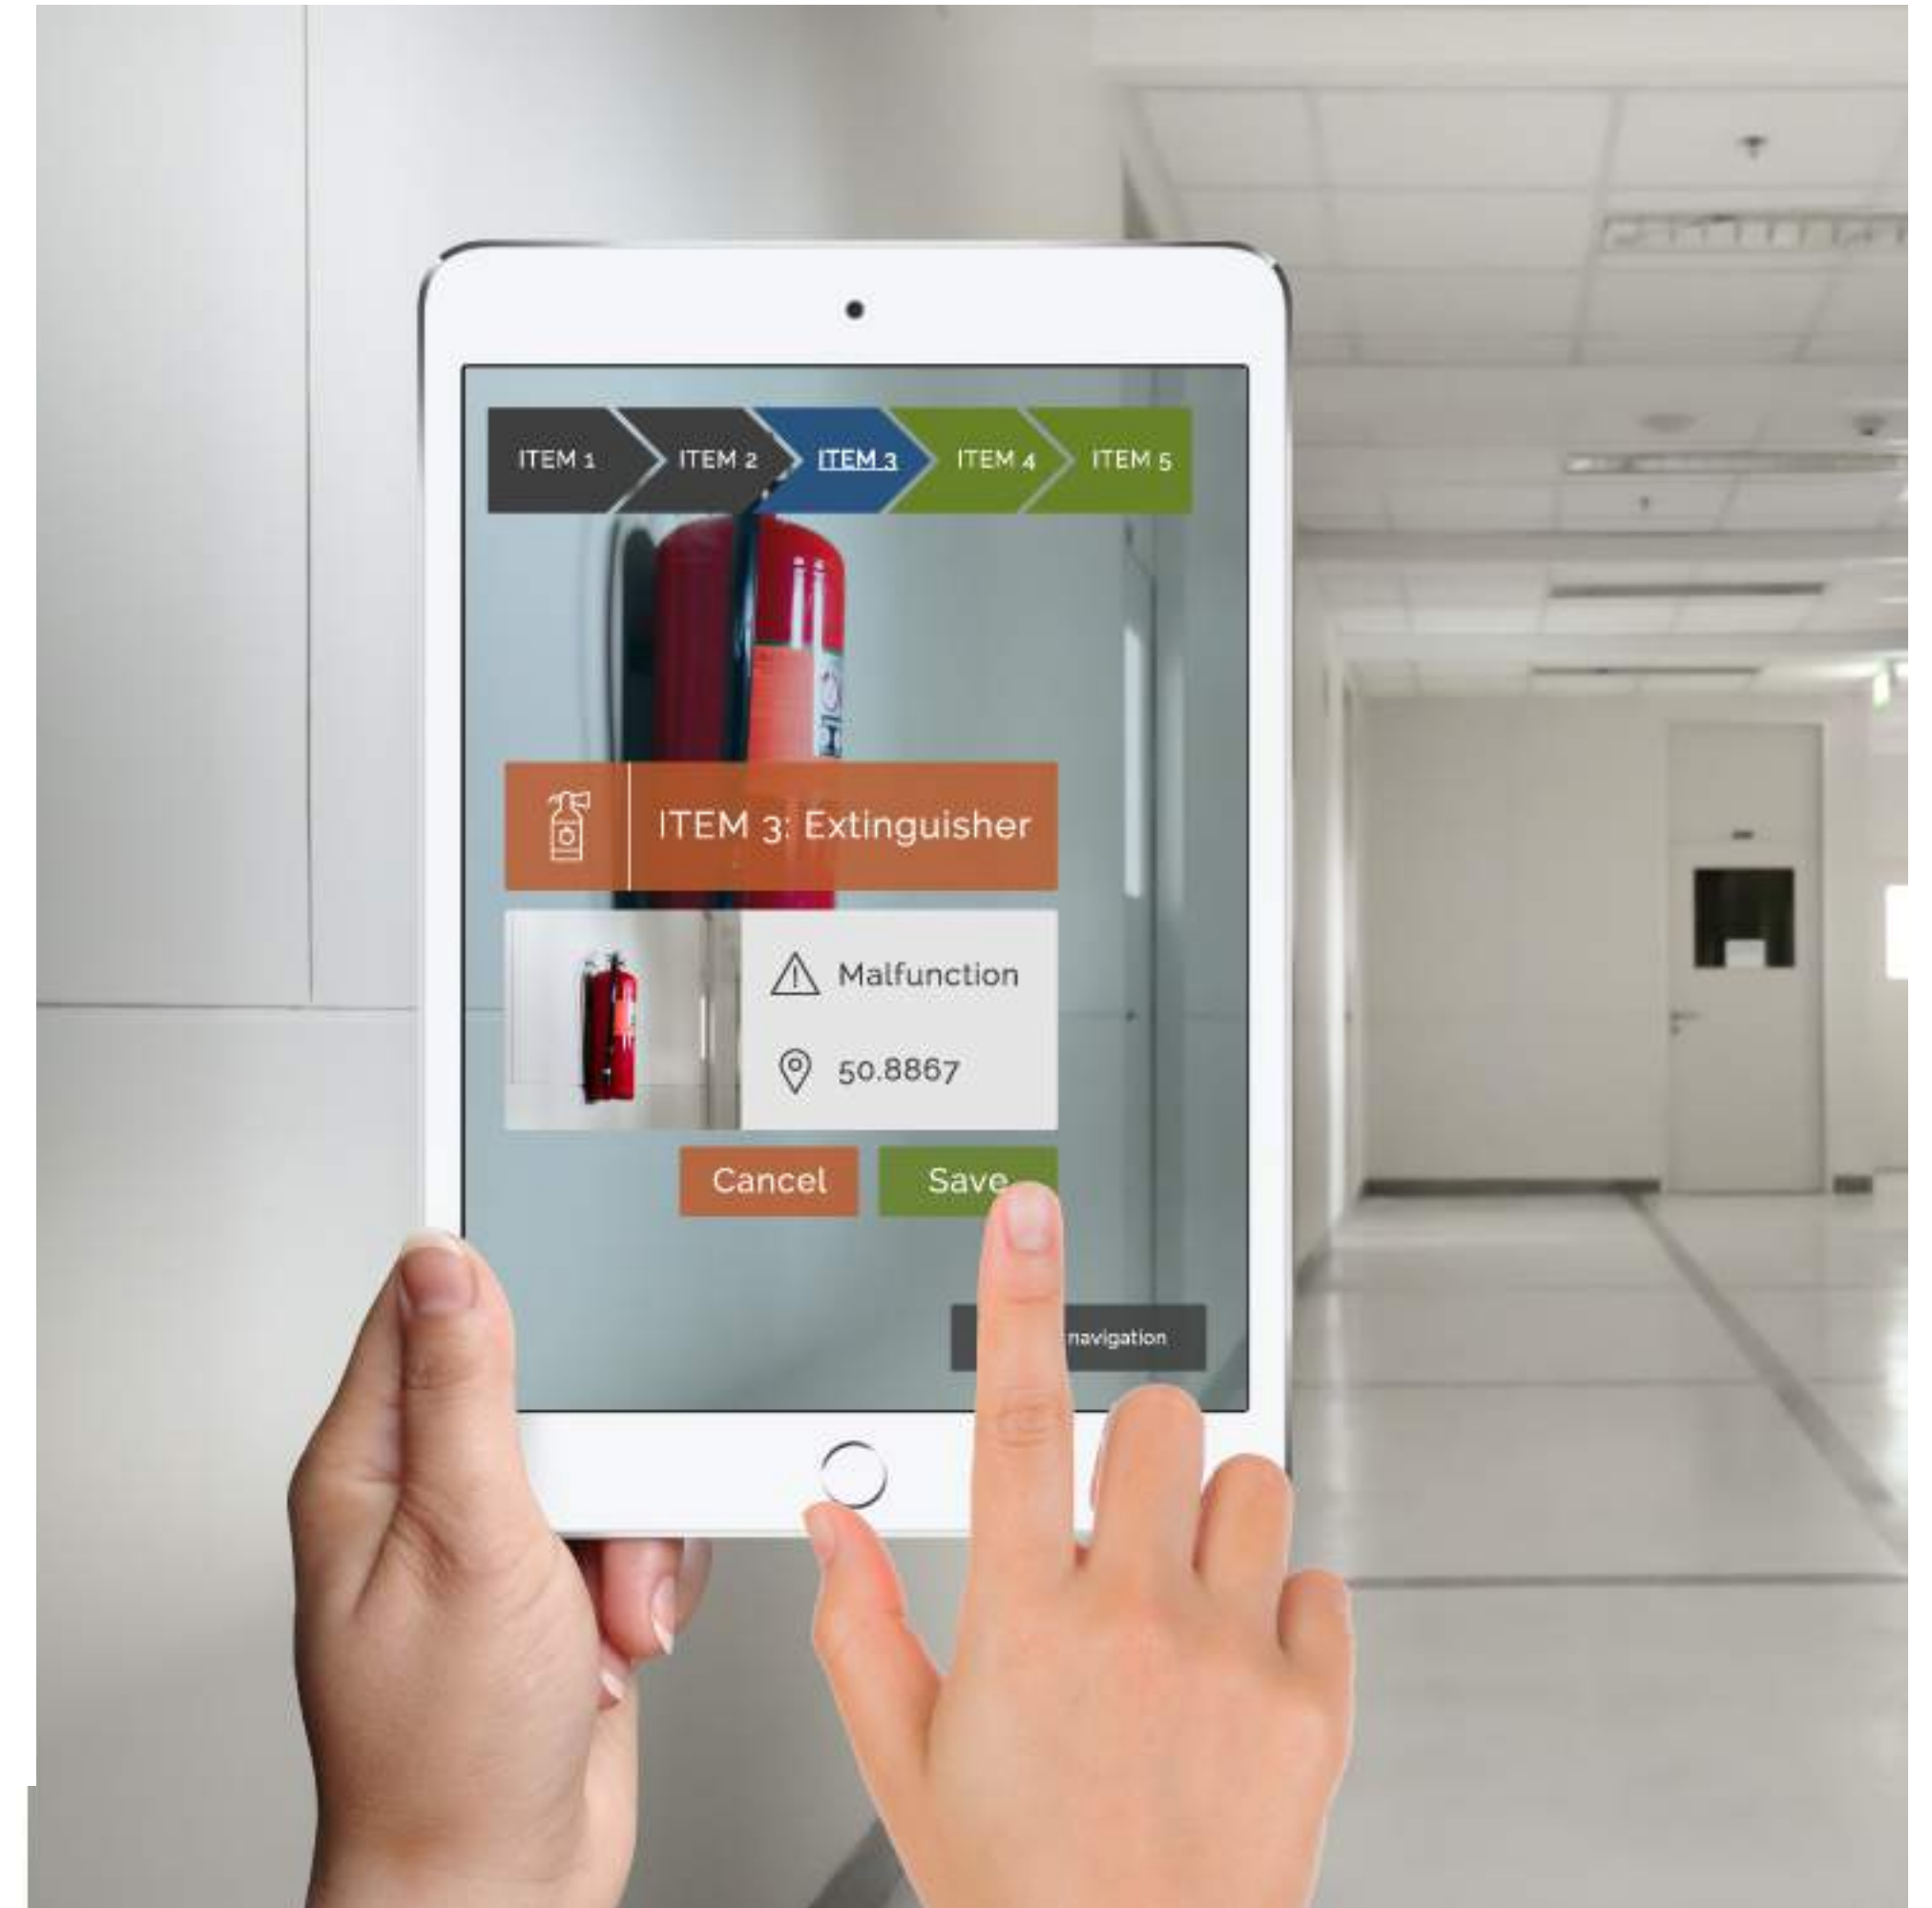

Maintenance operator checks the status of the fire extinguisher...

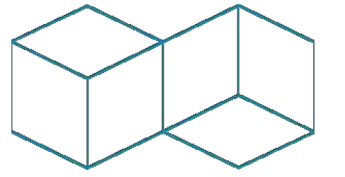

AR Maintenance

... if an error occurs, he can take a picture, save the exact position and automatically a ticket in SAP or any other ERP system is opened

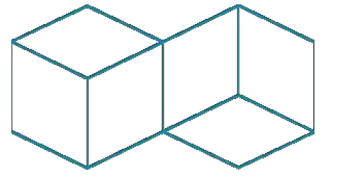

AR Maintenance

... or if the status of the fire extinguisher is ok, he can navigate easily to the next one, which should be maintained

AR Maintenance

... the repairing operator got the open ticket from SAP and can easily see and check the problem
