

KISSsoft KISSsys

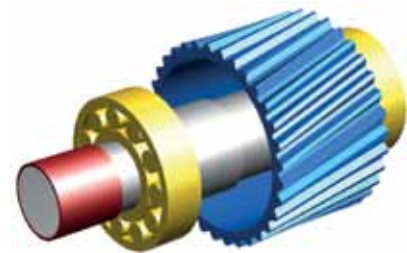

Efficient Gearbox Calculation
Reliable. Consistent. Precise.

Sharing Knowledge

KISSsoft KISSsys

Efficient

- Machine elements and gear units sized according to valid standards
- Possible solutions displayed clearly
- Variations calculated and optimizations performed in seconds
- Solutions classified according to chosen criteria

Productive

- A wealth of gear materials (plastic/metal) and bearing data
- Editable databases
- Integration of your own tools
- Simulations of processes with several manufacturing steps

Networked

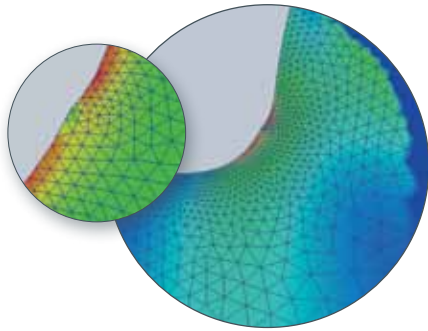

- Data is imported and exported rapidly
- Interfaces for connecting to various external programs
- COM interface for a closed process loop
- A multitude of manufacturing interfaces, such as GDE, GAMA and GEMS®

GEMS

One Source Solution

**KISSsys
Web**

System-oriented

- Modeling of complex gearboxes
- Risk estimation and damage prevention
- Calculation of system reliability
- System analyses with integrated FE calculation

Customer-specific

- Fast gear unit calculation via the Internet with KISSsysWeb
- Fully customizable user interfaces and software packages
- Technical support and engineering
- Topic-specific training courses
- Software updates and maintenance service provide the latest state of technology

Global

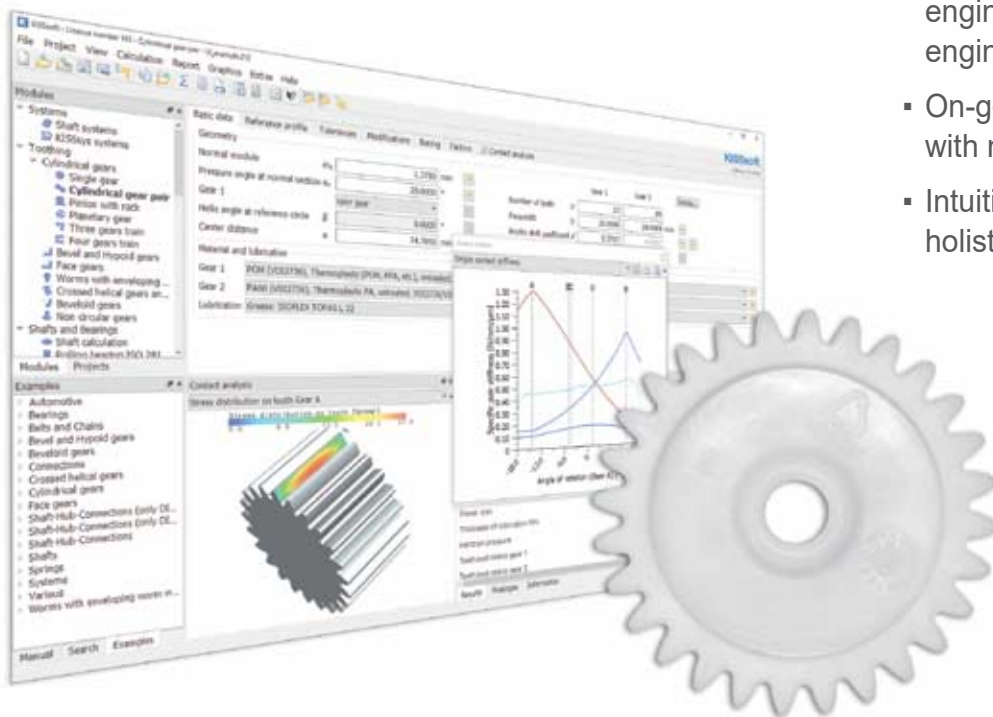

- Implementation of current international standards (AGMA, ISO, VDI, DIN, GOST, etc.)
- Expert technical representatives, world-wide
- Documentation in 8 languages
- Part of the Gleason Corporation
- On-going expansion into new markets and product areas

KISSsoft is a modular calculation program for sizing, optimizing and verifying machine elements.

The scope of the application ranges from a single machine element up to the automatic sizing of complex gear units with KISSsys.

KISSsoft KISSsys

- Designed by mechanical engineers for mechanical engineers
- On-going updates to comply with new norms and standards
- Intuitive, research-based and holistic
