

## M Seals A/S - the dedicated seal specialist

Since the foundation in 1963, the main concept of our company has been based on seals for industrial use. We cover the whole spectrum from the finest precision seals to the biggest heavy-duty seals and gaskets. Based in Scandinavia with offices in both Denmark and Sweden, we supply our seals worldwide with the root in our quality assurance system certified to ISO9001 and our own inspection facilities.

### Wind turbines - one of our special fields!

During our close cooperation with some of the world's leading manufacturers of wind turbines, M seals has gained special experience in the various sealing challenges in the nacelle, whether it is sealing of main bearing housing, dust and grease sealing of the yaw movement, or conversion from grease sealing to oil sealing in the main bearing of existing turbines. Other areas where we have possibility to offer sealing solutions are shaft sealing in the gearbox and hydraulic seals in pitch control system, either rubber, rubber/fabric or PTFE sealing systems. We offer on-site assistance with installation and troubleshooting as a natural part of our relations to our customers.
