Intelligent software for plant maintenance.

MachIQ APM is a comprehensive, cloud-based asset performance management system including a Maintenance Management System that enables plant owners to operate and maintain their facilities and production equipment in an efficient, cost effective and compliant way. Available as a Software as a Service (SaaS), APM is suitable for managing scheduled maintenance as well as for predictive maintenance based on intelligent analysis of alerts and machine data. It allows triggering of maintenance tasks based on multiple criteria, scheduling of interventions, creating maintenance task templates as Standard Operating Procedures (SOP) in order to guide maintenance personnel during task execution. The ability to attach documentation and spare parts to each work order enables workforce effectiveness as well as accuracy of spare parts inventory records.
