

Marston-Domsel GmbH

Marston-Domsel

your partner for sealants, adhesives, protection technologies and fastener systems.

High-quality products, made in Germany

Under the management of Martin Esser and with around 60 employees, **Marston-Domsel** produces and sells a variety of high-tech sealants, anaerobic liquid polymers, adhesives, and rotary shaft seals for trade and industry, around the world.

With over 60 years of experience, **Marston-Domsel** has become a by-word in the industry. As a medium-sized, family-run company, we are among the world's leading manufacturers of adhesives. In the future, too, we aim to continually optimise our range of products so we can further raise the bar in terms of functionality and performance. We collaborate with our customers both in Germany and around the world to solve their problems. In addition to our research findings, the experience we gain across the globe helps to benefit our customers. It goes without saying that our two production sites in Germany meet all the relevant standards, and, of course, we are certified under DIN EN ISO 9001.

The customer is always at the focus of our efforts, but we are naturally just as committed to making ongoing improvements in terms of environmental and health-related matters.

We have an in-house laboratory where we can carry out customer-specific tests, such as resistance tests, plasticity measurements, tension measurements, catalplasm tests, temperature tests and viscosity measurements.

Thanks to our optimised manufacturing processes, **Marston-Domsel** can pass the benefits of optimum, efficient production on to our customers.
