PROGRAMMABLE CONTROLLERS

CATALOGUE **PLC**

PROGRAMMABLE CONTROLLERS

WHY DO WE MAKE A PLC?

Recently we could see a clear trend towards adding measuring properties to what used to be simple logic controllers. That is why we decided to introduce a programmable logic controller in fusion with our measuring instruments. That is how the OMC 8000 series came into existence. It can be used for process control both with and without measuring. As a strong partner for the software side of the project we chose a renowned German company KW Software. Visualisation is part of our process control.

OVERVIEW OF OMC 8000

For our PLC OMC 8000 range we selected module architecture. At the heart of the system there is the main module which can be accompanied by up to 31 expansion modules. These can be both nearby, or at a distance. The maximum distance is up to 40 m while the maximum data flow is still maintained. Communication is realised using the CAN interface. It needs to be remembered that the higher the number of expansion modules, the higher the demands on the communication line there will be.

The main module can be powered by 230 V or 24 V. It contains three digital inputs, which react to the power supply voltage. It also comes with six versatile inputs, all of which are electrically isolated (sharing a common ground terminal amongst them), from outputs and power supply. These can process the following signals:

- pulse up to 30 V
- pulse - contact, NPN open collector
- analogue, voltage up to 30 V
- analogue, current up to 20 mA
- analogue, Pt 1000, Ni 1000, Pt 100 (only two inputs)

Versatile inputs can also be used as two full quadrature inputs for the use with quadrature encoders where two input signals come with a 90° phase shift + zeroing pulse. One pair can be used as RS485 for communication with external devices such as numerical or text displays, operator panel etc.

Output selection is between 5 relays with switching contact 250 V/10 A each or five open connectors NPN, 30 V/0,3 A.

OMC 8000 comes equipped with ETHERNET 100Base interface for network communication. Via this interface the PLC can be connected with other PLCs operator panels HMI or superior systems such as SCADA. OMC 8000 can also be used as a datalogger. MicroSD card is used for data storage.

Expansion modules increase the possibilities of the main module by adding inputs and outputs, precise and ultra precise measuring inputs, analogue outputs and communication modules. Part of OMC8000 series are also power supplies for Power Bus and sensors. Expansion modules are made in two widths: 36 mm with maximum number of connector terminals of 18 and 72 mm with maximum number of connector terminals 39. Modules are either powered by an iter-module line or by their own power supply unit.

PROGRAMMING OMC 8000

Programming of the PLC is fully in line with EN 61131-3 standard, which specifies syntax and semantics of unified file of programming languages including general software module and structuring language. These programming languages are available for creating user programs:

- IL - instruction list
- ST - structured text
- LD - ladder diagram
- FBD - function block diagram
- SFC - sequential function chart

MAIN MODULE

OMC 8000 is the main module of the PLC system.

- 3x DIGITAL INPUTS
- 6x UNIVERSAL ANALOGUE INPUTS
- 5x RELAYS
- ETHERNET, RS 485
- DIMENSIONS 72 X 90 MM
- POWER SUPPLY 80...230 V AC/DC OR 24 V AC/DC
- FULLY COMPATIBLE WITH EN 61131-3

DESCRIPTION

For our PLC OMC 8000 range we chose module architecture. At the heart of the system there is the main module which can be accompanied by up to 31 expansion modules. These can be both nearby, or at a distance. The maximum distance is up to 40 m while the maximum data flow is still maintained. Communication is realised using the CAN interface. It needs to be remembered that the higher the number of expansion modules, the higher the demands on the communication line there will be.

The main module can be powered by 230 V or 24 V. It contains three digital inputs, which react to the power supply voltage. It also comes with six versatile inputs, all of which are electrically isolated (sharing a common ground terminal amongst them), from outputs and power supply. These can process the following signals:

- pulse up to 30 V
- pulse - contact, NPN open collector
- analogue, voltage up to 30 V
- analogue, current up to 20 mA
- analogue, Pt1 000, Ni 1000, Pt 100 (only two inputs)

Versatile inputs can also be used as two full quadrature inputs for the use with quadrature encoders where two input signals come with a 90° phase shift + zeroing pulse. One pair can be used as RS485 for communication with external devices such as numerical or text displays, simple operator panel etc.

ADVANTAGES OF OMC 8000

- module architecture with the possibility of connecting up to 31 modules
- colour TFT display provides information about the state of the entire system
- ETHERNET 100Base
- data recording onto a microSD card with a selectable time stamp for a later analysis (to monitor trends, states of I/O, alarms, etc ...)
- versatility of inputs (digital, analogue, frequency, data)
- two inputs for IRC encoders (1 MHz) or six inputs PNP/NPN/contact (100 kHz)
- five relay or DC outputs
- micro SD card
- online editing which enables debugging
- web server
- programming according to EN 61131-3

POWER SUPPLY MODULES

OMC 8100 - PS is a module used for auxiliary power supply Buses. Its use is necessary each time when the total power draw of expansion modules powered by the Bus exceeds the capacity of the main OMC 8000 module. The power required by the expansion modules and the possible need to use the Power supply is evaluated when designing the PLC system in v MULTIPROGU and also in real life the main unit continually monitors the power being delivered and it informs the user accordingly.

OMC 8000 - PS30 is designed for Power supply Buses just like the OMC 8100 - PS, but in addition it has an output for Power supply external peripherals. The module has a 24 V output with the total current of 1 A connected to 6 pairs of terminals.

- ADDITIONAL POWER SUPPLY FOR MODULES ON THE BUS
- POWER SUPPLY FOR SENSORS

MULTIPROG® MODERN AND POWERFUL SYSTEM FOR PROGRAMMING IEC 61131

MULTIPROG Express is a less complex version of the well known IEC 61131 programming system MULTIPROG. This slight and easy-to-use programming tool mainly focuses on less complex PLC application programming and addresses also to "IEC beginners".

To satisfy these demands, MULTIPROG Express has got an even more convenient user interface and passes on some expert features.

Nevertheless, MULTIPROG Express still provides a wide range of proven functionality for a comfortable project creation, fast application development as well as easy downloading, monitoring and commissioning of the PLC program.

Additionally, MULTIPROG Express provides some more intelligent automatisms such as the insertion of program instances within tasks or an easy to use variable handling.

MULTIPROG Express is suited in an optimal way to the IEC 61131 PLC runtime system ProConOS embedded CLR which is the new, open and unified .NET-based runtime for embedded targets.

To simplify the project handling, the hardware structure has been limited (again for clarity and plainness reasons): one configuration, one resource and five tasks are allowed per project.

MULTIPROG Express runs on Microsoft Windows® XP, Windows® Vista platforms as well as on Windows® 7.

MULTIPROG EXPRES

The IEC 61131 programming system includes the programming languages Instruction List (IL), Structured Text (ST), Ladder Diagram (LD), Function Block Diagram (FBD), Sequential Function Chart (SFC) as well as:

- A project manager including library management
- Project Wizard and Edit Wizard
- The modern Ladder Editor that facilitates the development of graphical LD/FBD code
- Text editor with syntax highlighting and IntelliSense

- Grid-based variables editor for easy and error-preventing declaration of variables and FB instances
- Cross references window available in edit and debug mode
- Code compilation that is optimized to only compile the changed parts of the project
- Integrated PLC simulation with expanded simulation mode
- Debug and commissioning functions such as the logic analyzer, breakpoints, address debug, single step mode, overwriting and forcing of variables and recipes
- A watch window with continuous instance information A detailed, context-sensitive help system User interface languages in English, German, Czech, Chinese and Japanese

SYSTEM SPECIFICATION

PC SYSTEM	
Processor	Min. Pentium II 500
RAM	Win XP: 256 MB Win 7/Win Vista: 500 MB
Hard disk memory	Min. 500 MByte free
Communication	TCP/IP and/or RS 232
Operating systems	Win XPSP 3, Win Vista SP2 and Win 7 (32 bit) Internet Explorer > 5.0, required
DATA TYPES	
Bit stream	BOOL [1/8], BYTE [8], WORD [16], DWORD [32]
Numeric	SINT [8], INT [16], DINT [32], USINT [8], UINT [16], UDINT [32], REAL [32], time [TIME], array [ARRAY], structures [STRUCT] and string
SYSTEM LIMITS	
Nodes in the project tree	8000
Configurations/resources in the project tree	1/1
Program instances per resources	15
Tasks per resources ¹	5
Program instances per task	15
Global variable/local variables per PDU	5000/1500
Included libraries	32
PDUs on the project (incl. PDUs of libraries)	256
Number of I/O supported per project	128 Kbytes
I/O groups	200

¹ Only periodic and default tasks

PROVISIT 2,4 MASCHINE VISUALIZATION

ProVisIT is the easy and compact machine visualization with powerful features.

Easy applications can be designed very quickly within a few minutes using standard objects. For more complex applications Visual Basic Script allows to transfer the knowledge of your machine or plant into intelligent objects.

ProVisIT is a low cost alternative to large HMI packages and an alternative to own Visual Basic programming. Since ProVisIT supports both Windows® NT/2000/XP/Vista and Windows® CE, it gives the possibility to choose the needed hardware power for an HMI panel. ProVisIT projects are even 1:1 compatible between Windows® NT/2000/XP/Vista and Windows® CE.

In conjunction with the IEC 61131 programming system MULTIPROG and the IEC 61131 runtime system ProConOS, a complete and integrated automation system is available. Due to the support of OPC, ProVisIT can be integrated into existing systems easily, with or without MULTIPROG and ProConOS.

The user interface of ProVisIT is available in English, German, French, Czech and Simplified Chinese language. Due to Unicode support Chinese characters can also be used for texts inside the projects.

PROVISIT 2.4 DEVELOPMENT (EXPRESS)

The development system consists of a free graphical editor and a full-featured text editor for designing your applications as well as a runtime environment for testing and simulating your applications.

Further features are

- Easy reuse due to object instances and library functions
- Integrating own application knowledge by the means of VBScript and ActiveX Controls
- Extensive alarm and recipe handling
- Easy management and hierarchical filing of graphics and scripts by the means of a project tree
- A free graphical editor supporting e.g. drag & drop, grouping and aligning objects, undo/redo and zooming
- Large number of standard objects. Easy assignment of one or several dynamizations to objects
- Extensive dynamizations of objects, such as: Size, position, rotation, color changes and actions, e.g. defining user shortcuts, jumps to visualization pages, setting variable values, executing scripts and much more...
- International usage due to online language switching
- User defined libraries
- Password protection for projects and libraries
- Cross references
- Browsing of variables and objects via OPC which makes it unnecessary to enter data several times
- Presetting the screen size and other default settings
- Runtime operation without mouse when working at the machine
- Object related, user defined HTML help
- Supported interface standards DA 1.0A and 2.0A, certified by OPC Foundation

The development version is available for Windows® NT 4.0, Windows® 2000, Windows® XP and Windows® Vista.

PROVISIT 2.4 RUNTIME

The runtime version can be executed standalone or can be integrated into other applications as an ActiveX Control, e.g. into the Internet Explorer as HTML page.

The runtime version is available for Windows® NT 4.0, Windows® 2000, Windows® XP, Windows Vista® a Windows® CE 5.0 and NET.

SYSTEM SPECIFICATION

PC/CE SYSTEM	DESKTOP PC	CE DEVICE
Processor	Min. Pentium II 350	StrongARM, Pentium II

PERFORMANCE DATA²

Desktop PC: AMD 1,3 GHz, Win 2000	10 ms
ARM CE device: StrongARM 1110 206 MHz, Win CE3.0	40 ms
Intel CE device: Pentium II 350 MHz, Win CE 3.0	20 ms

¹ The given values are minimal approximate values. Dependent on the system and system performance, higher values are possible

² Minimum screen update rate: Screen with 150 objects, 25 are cyclic changed and updated via ProConOS® OPC-Server

GENERAL BUSINESS TERMS

1. Basic provisions

- The General business, service and guarantee terms arrange the relations for the delivery of goods and services, hereinafter referred to as "the Subject of performance" by ORBIT MERRET, spol. s r.o., [hereinafter referred to as "the Supplier"] to Customers and are binding upon all and any business relations.
- By signing the legally binding acts leading to the establishment of a Supplier-customer relationship of obligatory character, related to the delivery of the Subject of performance by the Supplier, the parties accept that their mutually binding relationship shall be governed in terms of the provisions of Section 262, par. 1 of the Commercial code by regime of the quoted law. Establishment of the arranged binding relationship is always conditioned by the Supplier's acceptance of the Customer's order form.

2. Price of the Subject of performance

- Catalogues and pricelists issued by the Supplier as well as oral and telephone information about the price of the Subject of performance are of informative character, not binding for the Supplier and not claimable by the Customer. The Supplier reserves the right to modify technical parameters, or as the case may be, also the prices of the Subject of performance without prior written notice. The Supplier is not responsible for errors generated during the print of the business and technical materials.
- For specification of the price, the Customer is entitled to request a binding quotation (hereinafter referred to as "the Quotation"), which is valid for a period of 21 calendar days from the date of issue unless provided otherwise.
- Prices of the Subject of performance listed in the Quotation do not include any related services, unless expressly provided for otherwise. Requirement for the provision of related services needs to be stated in the order.
- The Supplier assumes a standard use of the Subject of performance. Any specific requirements for the Subject of performance need to be expressed in the order.

3. Concluding the contract

- Individual business deals are concluded on the basis of written orders from the Customer, sent either by mail or fax, exceptionally also on the basis of oral or telephone order.
- An order has to contain the following elementary properties:
 - business name and seat of the Customer including telephone and facsimile contact numbers
 - name of the person authorized to act on behalf of the Customer, Trade Licence No. and Tax identification No. [if the Customer is registered as VAT payer];
 - explicit specification of the Subject of performance as per technical background materials of ORBIT MERRET, spol. s r.o., quantity, delivery terms (place and deadline), if pertinent, further specific requirements for the Subject of performance.
- After the receipt of Customer Order the Supplier sends the Customer an "Order Confirmation", which is done in writing either by fax or via e-mail. The Supplier is entitled to accept also orders delivered to him after the term of validity of the quotation expired. The Supplier is obligated to send the Order confirmation to the Customer no later than within 3 business days of the date of delivery of the order.
- In case the Customer Order requires a non-standard Subject of performance or the amount exceeds 1000 \$, prior to accepting the order, the Supplier may solicit a deposit in the amount agreed-upon in virtue of issued pro-forma invoice. The delivery time stated in the Order Confirmation starts running on the date the Customer pays the deposit.
- In case of larger supplies of the Subject of performance or specific conditions under which the supply is to be realized, or if either of the parties requires so, the parties of the contract may enter into a special agreement on the Subject of performance with reference to the wording of these General terms.
- All additional modifications or amendments to the contract (order) have to be made in writing in order to take effect.

4. Delivery terms

- Supplies of the Subject of performance shall be realized according to the Supplier's capacity in the shortest possible term, usually within 2 – 21 days, in case of special products and more extensive supplies within 3 – 8 weeks.
- The Supplier will meet the delivery terms provided that all financial obligations of the Customer from previously realized business deals have been settled.
- The expected term of supply is stated in the Order confirmation. In singular cases the Supplier may prolong the term of supply, however, he shall notify the Customer about the fact without undue delay.

- Delays in delivery terms of our subcontractors, strikes, export or import embargos, war or other events of force majeure relieve the Supplier from the obligation to deliver in term, without the Customer having the right to cancel the order or the right to claim damages (penalty).
- The delivery term is considered fulfilled when the Subject of performance is delivered to the Customer in the issuing office of the Supplier (personal collection), or by appointed employee of the Supplier in the place of delivery or by handover of the Subject of performance to the first domestic carrier.
- If personal collection by the Customer is arranged for, the delivery term is considered fulfilled also by notification of the Customer, that the Subject of performance is ready for dispatch.
- Costs related to delivery and place of performance other than the issuance office of the Supplier shall be borne by the Customer.
- If the Customer fails to take over the Subject of performance due to reasons on his part, the Customer shall bear the full costs related to repeated delivery.
- If the Customer finds variance with the delivery note, difference in quantity and type of performance, apparent damage of packaging or products, he is obligated to immediately report such fact to the Supplier or the bearer of the consignment, and record it in writing on the delivery note or the delivery note of the forwarding service, however, within 2 business days from delivery at the latest. Later claims of this character will not be taken into account.

5. Orders cancelled by the Customer

- In case of order cancelled after it has been confirmed based on request of the Customer, the Supplier is entitled to bill the Customer 20 % of the price of not taken products.
- If the delivered Subject of performance is returned without justification after the agreed-upon term, the Supplier is entitled to charge a contractual penalty in the amount of 50% of the total price of the delivery.
- If the Supplier enforces his right to compensation money or contractual penalty for unjustified return of delivery pursuant to the provisions of par. 5.2., confirmation of the order is cancelled after the set amount is paid. In case of default in payment of this amount the Supplier is entitled to enforce the sanctions pursuant to par. 6.3.

6. Terms of payment

- Unless special terms of payment were arranged for, our invoices are due for payment within 14 days.
- The Supplier is entitled to invoice immediately after the Subject of performance is handed over to the first public carrier, in case of personal collection after it is realized or after delivery of goods by the Supplier.
- If the Customer fails to pay in due date, he is obligated to pay the Supplier a contractual penalty for delay in the amount of 0,10 % of the billed amount for each day of delay.
- In case of delay in performance of the Customer's liabilities the Supplier is not obligated to perform further supplies until the debt is liquidated. In such case, the Customer is not entitled to claim penalty for late performance that ensued from given circumstances. In case of long-term default in performance of liabilities of the Customer, his confirmed orders may be excluded from the records without any compensation.
- The due date is the date by which the amount has to be credited to the account of the Supplier or paid in cash at the Supplier's cash desk.

7. Ownership of the subject of performance

- The right of ownership to the Subject of performance pursuant to these General terms is transferred to the Customer at the moment of payment of the full amount of the purchase price.

8. Guarantee terms

- The Supplier provides a 60 months guarantee for non-defective operation of the Subject of performance, which period starts running on the date of its delivery unless provided for otherwise.
- The Supplier is not responsible for damages caused by incorrect warehousing, wrong outer connexion, outside influences, in particular electric quantities of inadmissible magnitude, unprofessional assembly, wrong adjustment or attendance.

9. Other provisions

- In cases when the General business terms differ from the terms set out in the submitted Customer order, the provisions contained in the order confirmation hold valid for the purpose of conclusion of the contract. Prospective modifications from the Customer have to be approved by the Supplier, otherwise par. 3.6. applies.
- The mode of transportation of the Subject of performance is determined by the Supplier with maximum respect to economical aspects of the transport, unless the Customer has expressly requested otherwise.
- The General business terms are governed by the provisions of the Commercial code. Any disputes related to the application, implementation or interpretation hereof would be solved at the Commercial court in Prague.
