

# LOGIC VALVES

Logic valves are intended for compact mounting of cartridge hydraulics. The working element (URZS) was designed for mounting in standard port (DIN ISO 7368) in a control block and closed with an appropriate cover (ULZS).

The cover acts as a connection of the control working element (URZS) with the controlling equipment.

The covers are available in various versions, some of them can be equipped with a function of electronic control of closed position of the valve.

## LOGIC VALVES

	group	NS	P <sub>max</sub> [MPa]	Q <sub>max</sub> [dm <sup>3</sup> /min]	type
	logic valves	16-50	42	140-2400	URZS, URZS/S, URZS...D
	covers for logic valves	16-50	42	140-1600	ULZS, ULZS...DB, ULZS ED
