

The **AS series cabinets** are built from a single structure, made of press bent and welded sheet steel, to ensure airtight sealing with the door. The hinged door is reinforced with a special support frame with horizontal crosspieces and cable raceways.

The bottom is fixed and has an opening for the passage of cables, with the relative cover. Since the cabinet is made of single welded structure, it is accessible only from the front.

Optional variants for other configurations of the basic “AS” Series cabinet include:

“**ASB**” – Blind external door;

“**ASV**” – Blind and/or perforated internal door (on request) and transparent external door;

“**ASD**” – Modular internal blind and/or perforated panels and transparent external door;
