

PRODUCT CATALOGUE

TAVRIDA ELECTRIC IS A GROUP OF COMPANIES THAT SPECIALIZES IN THE DEVELOPMENT AND MANUFACTURE OF INNOVATIVE SWITCHGEAR PRODUCTS FOR INDOOR AND OUTDOOR APPLICATIONS IN MEDIUM VOLTAGE (MV) SMART GRIDS. TAVRIDA ELECTRIC CONDUCTS EXTENSIVE RESEARCH AIMED AT DEVELOPING NEW SWITCHING AND CONTROL TECHNOLOGIES, WITH A PRIMARY FOCUS ON RESOLVING CUSTOMER PROBLEMS NOT MET BY CURRENT PRODUCTS ON THE MARKET.

ADVANTAGES

MAINTENANCE FREE

MOST COMPACT DIMENSIONS AND WEIGHT

HIGH OPERATIONAL SPEED

EASE OF USE AND OPERATOR'S SAFETY

ENVIRONMENTAL SAFETY

PRODUCT RANGE

VACUUM CIRCUIT BREAKERS

High performance vacuum circuit breakers for compact switchgear designs, existing plant refurbishment/retrofit programs and special applications.

AUTOMATIC CIRCUIT RECLOSERS

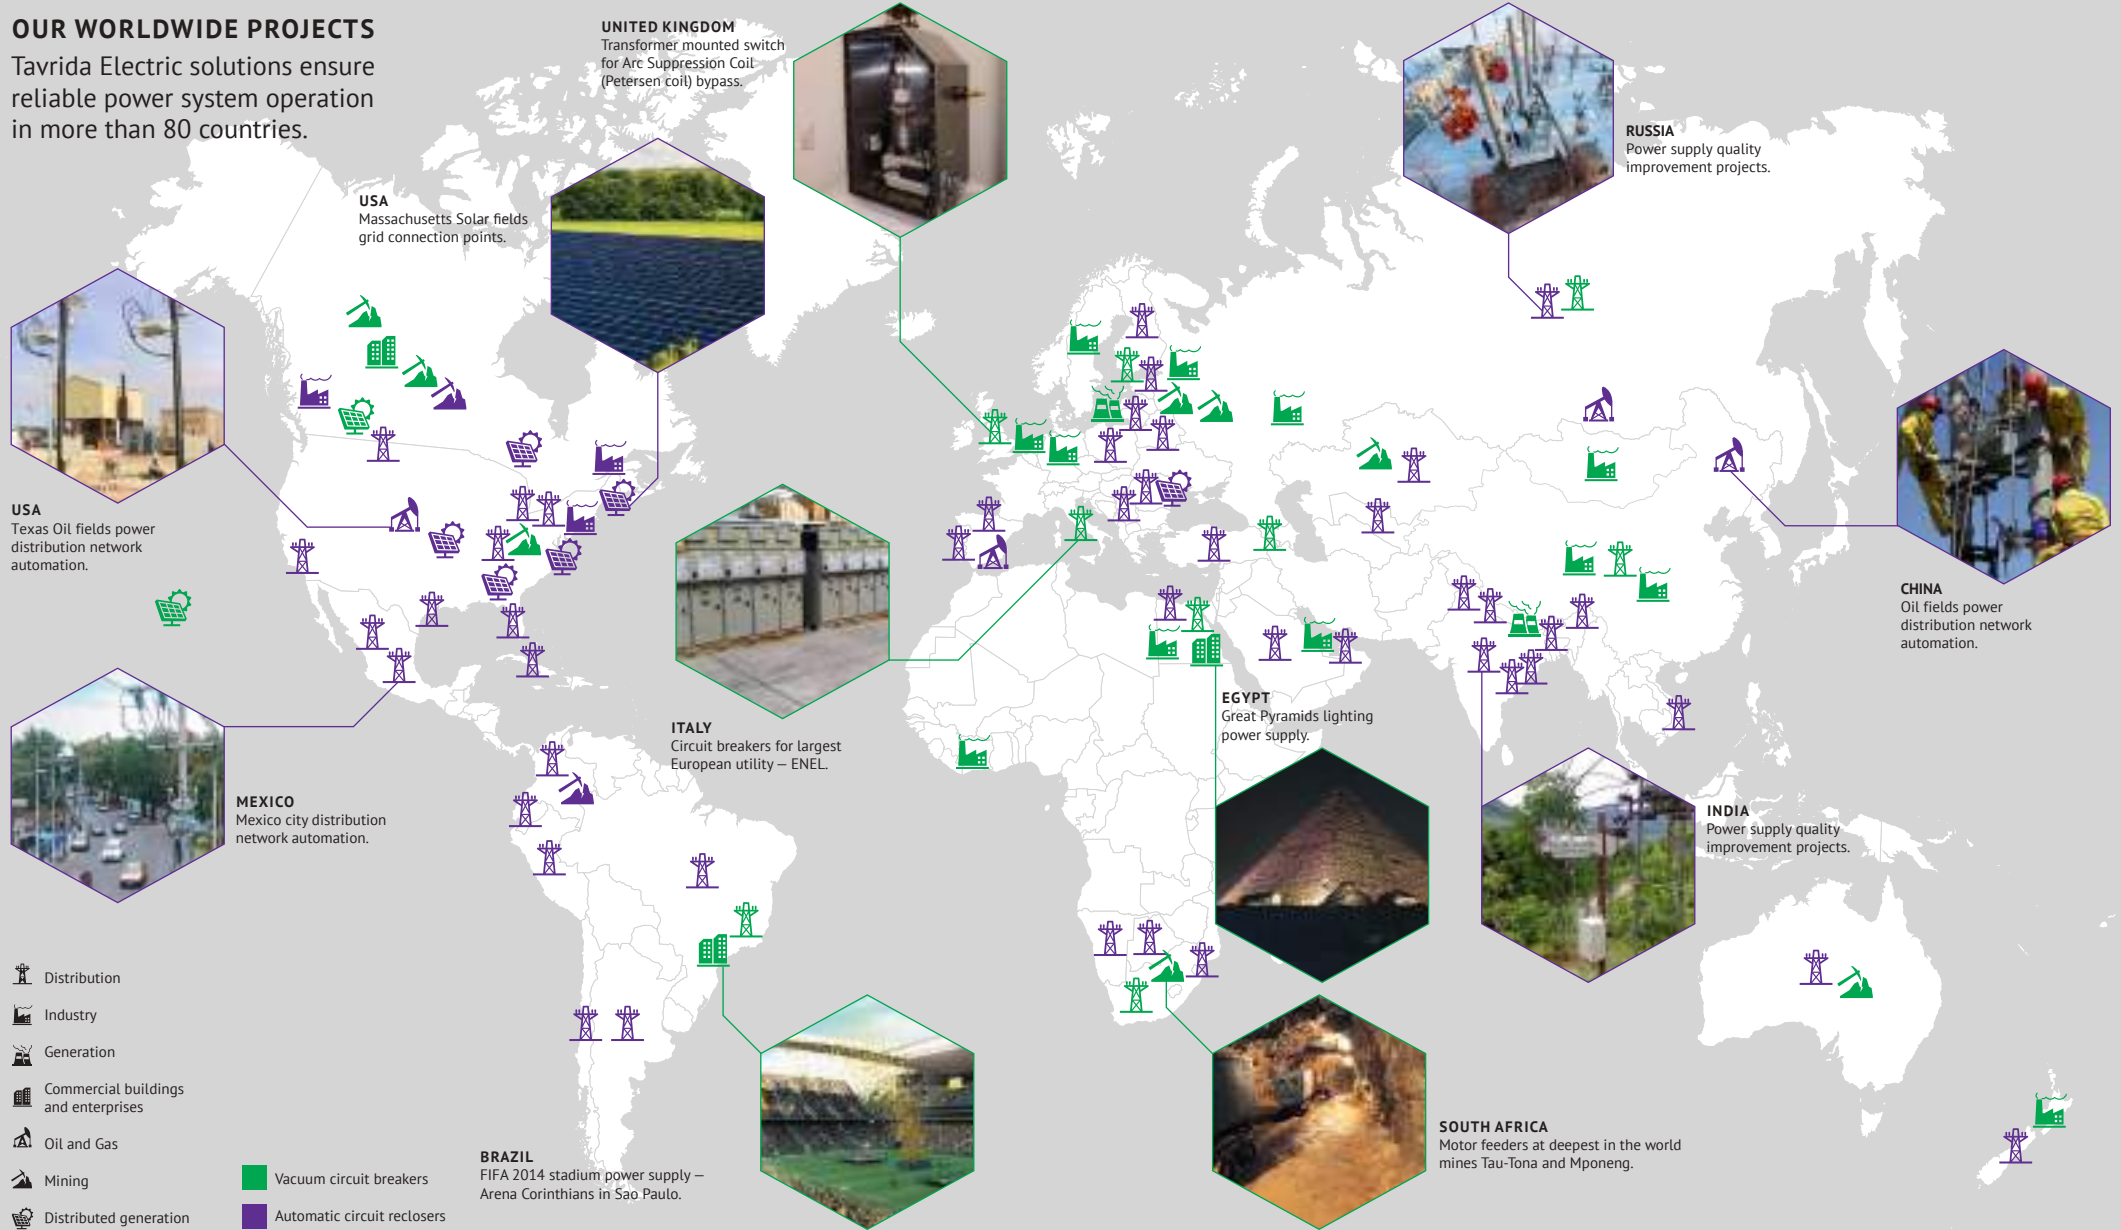

Automatic circuit recloser for substation automation, distributed generation and important load connections. Suitable for ring, radial and meshed overhead lines. A core element of contemporary smart grid networks.

OUR WORLDWIDE PROJECTS

Tavrída Electric solutions ensure reliable power system operation in more than 80 countries.

- Distributed generation

- Vacuum circuit breakers
- Automatic circuit reclosers

Vacuum Circuit Breaker (VCB)

SIMPLICITY IS PERFECTION

Gears, springs, bearings, levers and other rotating parts are the most often causes of conventional circuit breaker failure. Luckily Tavrida Electric breakers are better than conventional. Tavrida Electric has simplified its breaker design – completely removing all components prone to failure. As the result VCB has 20 times the reliability of conventional circuit breakers and furthermore doesn't require any maintenance in service.

ANY SPATIAL ORIENTATION

LIGHTEST IN THE WORLD

CONTINUOUS SELF-SUPERVISION

SINGLE PHASE OPTION

30,000 CLOSE OPEN OPERATIONS

YOUR SWITCHGEAR, DEFINED AND DESIGNED IN ACCORDANCE WITH YOUR VISION

You know your switchgear best; you know how to optimize its design and how it should operate. That's why the Tavrida Electric VCB series circuit breaker is so revolutionary – because it puts the design control in your hands. With the smallest dimensions on the market and ANY circuit breaker orientation, you are free to optimize your switchgear design, define how to make primary and secondary connections, and lay your

secondary circuits. That means you can guarantee the optimum use of space and convenient access to the control elements without having the need to compromise on something. Want even higher flexibility? Weighing just 34 kg, the Tavrida Electric's circuit breaker is the smallest and lightest circuit breaker in the world. Impress your customers with unique switchgear designs no-one else can copy.

Application

OEM solutions and VCBs for retrofit

Tavrida Electric cooperates with more than 300 switchgear manufacturers and retrofit solutions providers. Over many years of cooperation, Tavrida Electric VCBs have proved versatile and easy-to-use for both new and

existing switchgear panel designs, as well as for retrofit solutions. They are the smallest and lightest solution on the market, work regardless of orientation and are easy to install.

Special application circuit breakers

FAST TRANSFER SWITCHES

with transfer times as fast as 2 cycles. Such quick operational times allow very sensitive loads to operate without interruption in the case of a main power source loss. The fast transfer switch solution:

- eliminates costly downtime,
- reduces production equipment stress,
- ensures quick return on investment.

- reduces costly downtime,
- limits switchgear damage and repair costs.

FAULT CURRENT LIMITER – sub period interruption time limits short circuit current effectively by quickly disconnecting distributed generation sources from the grid.

- allows more distributed generation, to be connected to the grid,
- limits fault current,
- no operational losses,
- enables automatic distributed, generation sources reconnection.

ARC FLASH MITIGATION

with interruption in one period. That quick interruption time:

- increases operational safety,
- reduces switchgear restoration time and loss of productivity,

Single phase circuit breakers

Tavrida Electric's circuit breakers are the perfect match for applications like transformers or generators with a neutral earthing, server rooms and point on wave switching. The circuit

breakers weigh less than 14 kg, meaning they can be installed quickly and cost effectively even in the smallest designs.

Design and operation

- ① Tavrída Electric manufactures compact vacuum interrupters with high interrupting performance and an extraordinarily long mechanical and electrical lifespan.
- ② The patented design of the actuator allows it to be installed directly underneath each pole. The design is optimal in terms of **reliability, dimensions, weight and ease of installation.**
- ③ The use of robot welded steel discs as opposed to folded bellows eliminates the main failure point of conventional vacuum interrupter designs and maintains a **high vacuum for its entire lifetime.**
- ④ The actuator is **not dependent on the auxiliary power supply quality.** The mechanism enables both **local and remote operation.**

Control module CM_16

The Control Module is an intelligent circuit breaker driver that provides energy for circuit breaker operation. It controls and optimises main contacts movement in the manner that prolongs circuit breaker life and continuously monitors circuit breaker trip and close circuits.

CONTINUOUS SELF-SUPERVISION

Vacuum circuit breakers equipped with the CM16 control module continuously monitor and control switching modules, functional wiring and auxiliary power supply quality. The CM16 eliminates the necessity of additional trip and close coils, charging mechanisms and all related wiring supervision. The whole trip and close circuit supervision comes in a single package with any Tavrída Electric VCB. The CM16 allows the user to forget about scheduled trips and close wiring inspections – as in the event of malfunction a notification will be sent to the operator using one of the inbuilt output relays and indicated by LEDs inbuilt into the control module.

LOW POWER CONSUMPTION

Vacuum circuit breakers equipped with the CM16 control module need less than 42 W – just 10% of what the best alternatives available on the market need! Such low power consumption finally solves the problem of auxiliary power supply – a much less powerful source and UPS can now provide substation auxiliary equipment with the required power.

EASE OF USE AND ROBUSTNESS

CM16 type control modules are connected with the circuit breaker they control and supervise by means of simple wires. This allows the CM installation to be located at any position convenient for the OEM, system integrator or end-user location. Very compact dimensions and low weight further simplify the process. The CM16 has a robust design, enclosed in an aluminium housing it provides a high EMC level confirmed by KEMA test laboratories.

- ⑤ The energy for switching operations is stored in the Control Module (CM). This reduces **the auxiliary power supply needs to 1/10 of a conventional circuit breaker** and enables significant savings on Substation UPS and auxiliary equipment.
- ⑥ Embedded intelligence – The CM's **continuous self-supervision** function monitors control, switching modules, functional wiring and auxiliary power supply quality. In the event of malfunction, a notification will be sent to the operator and indicated by inbuilt LEDs.
- ⑦ The CM can be conveniently installed at a distance from the circuit breaker and connected by means of flexible leads. It significantly simplifies the installation and allows the CM to be installed with other low voltage devices.

ON THE MARKET

Heavy Duty – Shell series

HD series vacuum circuit breakers for rated continuous currents up to 2000 A.

Using the same single-axis design philosophy as the LD series, the Shell series brings more innovation in a compact package. Standing only 53 cm high, and as narrow as the LD series, the Shell model handles currents as high as 2000 A continuous and 31.5 kA short-time and interrupting. The exceptional shell-type design insulates the phases from each other, with multiple

mounting points incorporated to allow for installation in flexible orientations (vertical or inverted). The Shell series simplifies interlocking functionality using an integrated manual trip lever at the rear to block the unit both electrically and mechanically.

Automatic circuit reclosers

Designed and built to last, the Tavrida Electric recloser combines the best of the Tavrida Electric vacuum circuit breaker's features: innovative insulation materials, high precision sensors and sophisticated numerical control.

FROM -50°C IN RUSSIA
TO +55°C IN THE MIDDLE EAST

30,000 C-O OPERATIONS WITH RATED CURRENT
OR 200 OPERATIONS WITH FULL SHORT-CIRCUIT
BREAKING CURRENT

Application

Feeder Automation

RADIAL LINE RECLOSER

When a recloser is installed on a radial feeder it automatically clears transient faults and isolates permanent faults. More than one recloser can be installed on a feeder to isolate faults selectively and ensure fewer customers are affected.

LOOP RECLOSER

A loop recloser further improves the reliability of a power supply by automatically
– isolating faulty sections
– reconfigures the network to minimize the amount of customers without power supply
Loop reclosers are the best option to maximize reliability performance indicators of your distribution network.

Substation Automation

The Tavrida Electric recloser can be used to quickly build a cost-effective unmanned substation. Providing full protection and automation functionality required at the substation.

Design and operation

- ① The air insulated, **corrosion-resistant** tank incorporates a solidly insulated circuit breaker, sensors and auxiliary mechanisms.
- ② Each of the six bushings are made of UV stable, hydrophobic polymer, that guarantees reliable performance in heavily polluted areas. Confirmed by environmental testing in KIPTS*.
- ③ The 6x current and 6x voltage high accuracy sensors. Voltage sensors allow measurements to be taken from either side of the recloser.
- ④ Mechanical trip hook for OSM manual operation. For **superior linesman safety**, the hook in the downwards position electrically isolates the actuator's circuit to prevent the possibility of any unintended recloser operation.
- ⑤ The recloser protects the network against overcurrent, earth faults, over- and under-voltage, over- and under-frequency, current and voltage imbalances, and many other problems. The control box has an embedded RTU that provides communication with SCADA over various communication protocols: DNP3, Modbus, IEC-104.
- ⑥ The control cubicle has an inbuilt large battery and smart battery charger to improve battery life. The battery allows 48 hrs of operation with no auxiliary power supply present.
- ⑦ TELARM** user software allows local and remote device control and configuration, downloading loads, fault and load profiles and oscillogram. TELARM® is the first recloser software that allows automatic protection settings coordination, various failure modes simulation, devices configuration and remote control in single package!

* Koeberg Insulator Pollution Test Station (KIPTS) is known internationally as a severe environmental testing facility run by ESKOM, in South Africa
**Tavrída Electric Automated Relay Manager

BEST VALUE FOR THE MONEY

With a maintenance-free design rated to perform 30,000 open and close operations, Tavrída Electric reclosers keep expenses to a minimum over their entire lifespan. They are installed on typical overhead feeders, significantly improving a network's key performance indicators and their use results in a quick return on investment.

SOPHISTICATED CONTROL AND PROTECTION

from various faults, including: short circuits, earth faults, high impedance earth faults, broken wires, islanding, incorrect tap changer operations, network overload and over- or under-generation. The embedded RTU and metering ensures the reclosers are SCADA-ready with no additional expenses.

TELARM® DISPATCHER AND DUAL-SCADA

TELARM® Dispatcher is a proprietary remote control and monitoring system that works as a standalone SCADA and/or in parallel with an existing SCADA system, acting as a back-up method of controlling and monitoring reclosers. TELARM® Dispatcher offers a number of features not available with most conventional SCADA systems, such as remote access to system logs, fault and load profiles and the remote control of protection settings.

Recloser accessories selection

Tavrída Electric has designed a variety of accessories that facilitate the Rec integration.

Bird protection
Custom designed bird guards provide protection against wildlife.

Local wireless connection
Bluetooth or Wi-Fi module provides ability to connect Recloser Control Cubicle with a computer via Bluetooth or Wi-Fi correspondingly for local control and monitoring.

USB to Ethernet adaptor
USB-to-Ethernet adaptor allows to connect the recloser to a network

Input/Output module
IO module has 12 galvanically isolated inputs and 12 outputs with normally open and normally closed contacts.

Interface test set
Custom designed testing tool to test recloser protection and automation functions.

VT mounting holder
Universal holder for auxiliary voltage transformer with mounting provisions from 200x140 mm up to 280x220 mm

State of the art Recloser Control Cubicle – RC

PROTECTION

The recloser protects against overcurrent, earth faults, over- and under-voltage, over- and under-frequency, current and voltage imbalances and many other problems.

MEASUREMENTS

The recloser can measure phase, neutral and sequence currents, phase-to-phase and sequence voltages and three-phase active and reactive power and energy. Key measurement data can be logged.

COMMUNICATIONS

The control cubicle has various communication interfaces and can be connected with any third party modem via RS-232/RS-485 or the Ethernet using various communication protocols, including Modbus, DNP3 and IEC-104.

LARGE BATTERY

48hrs operation battery, charged by smart battery charger and maintenance free for up to 10 years.

MONITORING

Highly comprehensive, remotely accessible separate log files for load and fault profiles, events, malfunctions, lifetime and change messages.

CONTROL CUBICLE

- the recloser control cubicle is made from lightweight powder-coated anodized aluminum,
- the control panel has a graphical LCD for clear event indication, comprising six-lines of 40-characters.

*please consult local representative for additional information on these services.

USER SOFTWARE

The Tavrída Electric Automated Relay Manager (TELARM) is designed for the specific needs of electricity distribution networks. It allows:

- downloading of logs, profiles, oscillograms, settings, etc.
- uploading protection, communication and systems settings,
- recording of logs (event, malfunction, communication etc) and detailed fault profiling,
- the customising of a control signal map for a customer's SCADA applications.

Certificates

"DEKRA Certification B.V." auditors praised the "Tavrida Electric" quality management system and noted attention and active involvement of managers and staff at all levels in the continuous improvement of the company's operations.

Tavrida Electric Vacuum Circuit Breakers

Tavrida Electric VCBs are designed and manufactured to strictly comply with the latest revision of IEC 62271-100. World known independent Laboratories STL liaison members.

Each assembled VCB is subjected to routine testing in accordance with IEEE C37.60/IEC 62271-100 at the factory

TYPE TESTS

- Dielectric tests
- Measurement of the resistance of the main circuit
- Temperature rise test
- Short-time withstand current and peak withstand current test
- Extended mechanical operation test
- Short-circuit current making and breaking test
- Single and double earth fault test
- Shortline fault test
- EMC tests for control electronics
- Extended electrical endurance test
- Capacitive currents switching test

ROUTINE TESTS

- Visual check and functionality tests
- Dielectric withstand test
- Measurement of the resistance of main circuit
- Mechanical operation test

Tavrida Electric Reclosers

The Rec series automatic circuit reclosers are designed and manufactured to strictly comply with the latest revisions of IEEE C37.60 and IEC 62271-111

Each assembled Rec series recloser is subjected to routine testing in accordance with IEEE C37.60/IEC 62271-111 at the factory

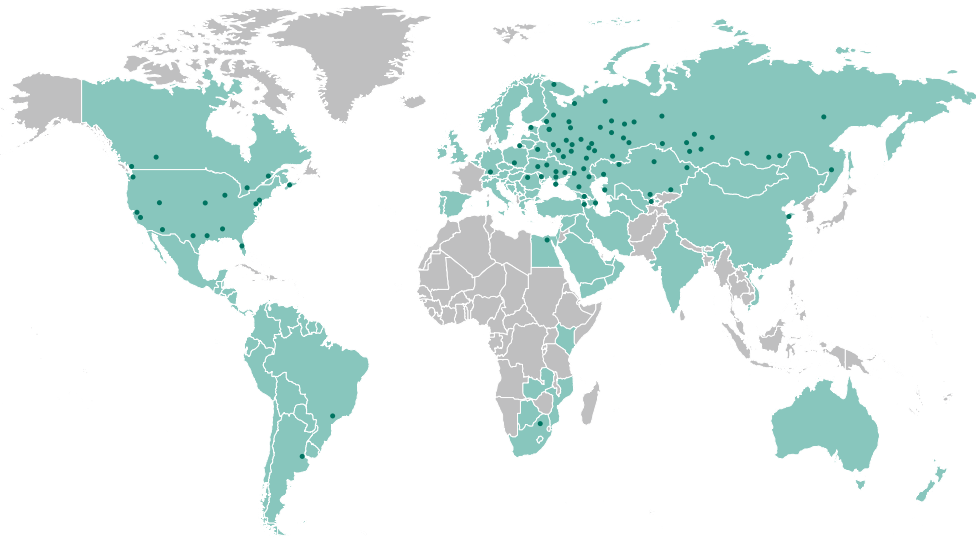

TYPE TESTS

- Dielectric tests
- Measurement of the resistance of the main circuit
- Temperature rise test
- Short-time withstand current and peak withstand current test
- Extended mechanical operation test
- Short-circuit current making and breaking test
- EMC tests for control electronics
- Capacitive currents switching test

ROUTINE TESTS

- Visual check and functionality tests
- Dielectric withstand test
- Measurement of the resistance of main circuit
- Reclosing and overcurrent calibration
- Mechanical operation test
- Partial discharge test
