# We establish cyber security in critical infrastructures

Energy

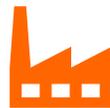

Water

Oil & Gas

Chemical

Manufacturing

Agribusiness

Health

Transport

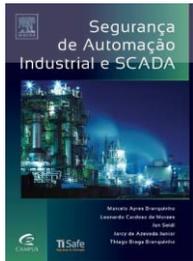

Financial

# Who we are

## Pioneers

Our team brings together specialists in industrial cybersecurity. We established the first R&D center in the segment in Latin America. We published the first book in Portuguese on the subject.

## Leaders

We provide cyber security solutions for industrial networks from major critical infrastructures in Latin America. Millions of people are protected daily by the TI Safe services.

## Reference

TI Safe is the creator and curator of the CLASS, Latin American Congress of SCADA Security, the largest event in Latin America on the subject.

## Normative performance

We operate in international working groups to develop standards for cyber security of critical infrastructures.

Ti Safe

# ICS.SecurityFramework

Methodology developed by TI Safe based on standards and market best practices to organize, execute and operate cyber security in critical infrastructure industrial systems.

# Steps of the **TiSafe** ICS.SecurityFramework

Monitoring and Industrial Intelligence

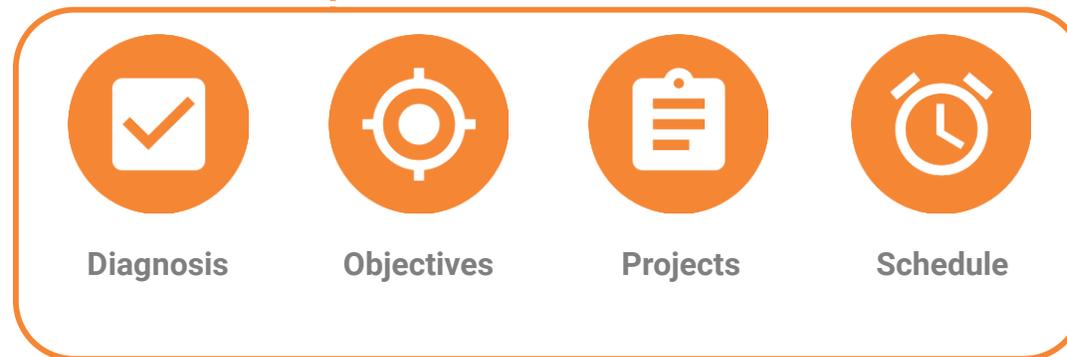

Static Analysis

Dynamic Analysis

Physical and logical security audit of the automation network based on IEC 62443 standards, NIST SP 800-82 and ISO 27001.

Data collection in application layer in a non-intrusive and real-time manner.

# ICS Cybersecurity Plan

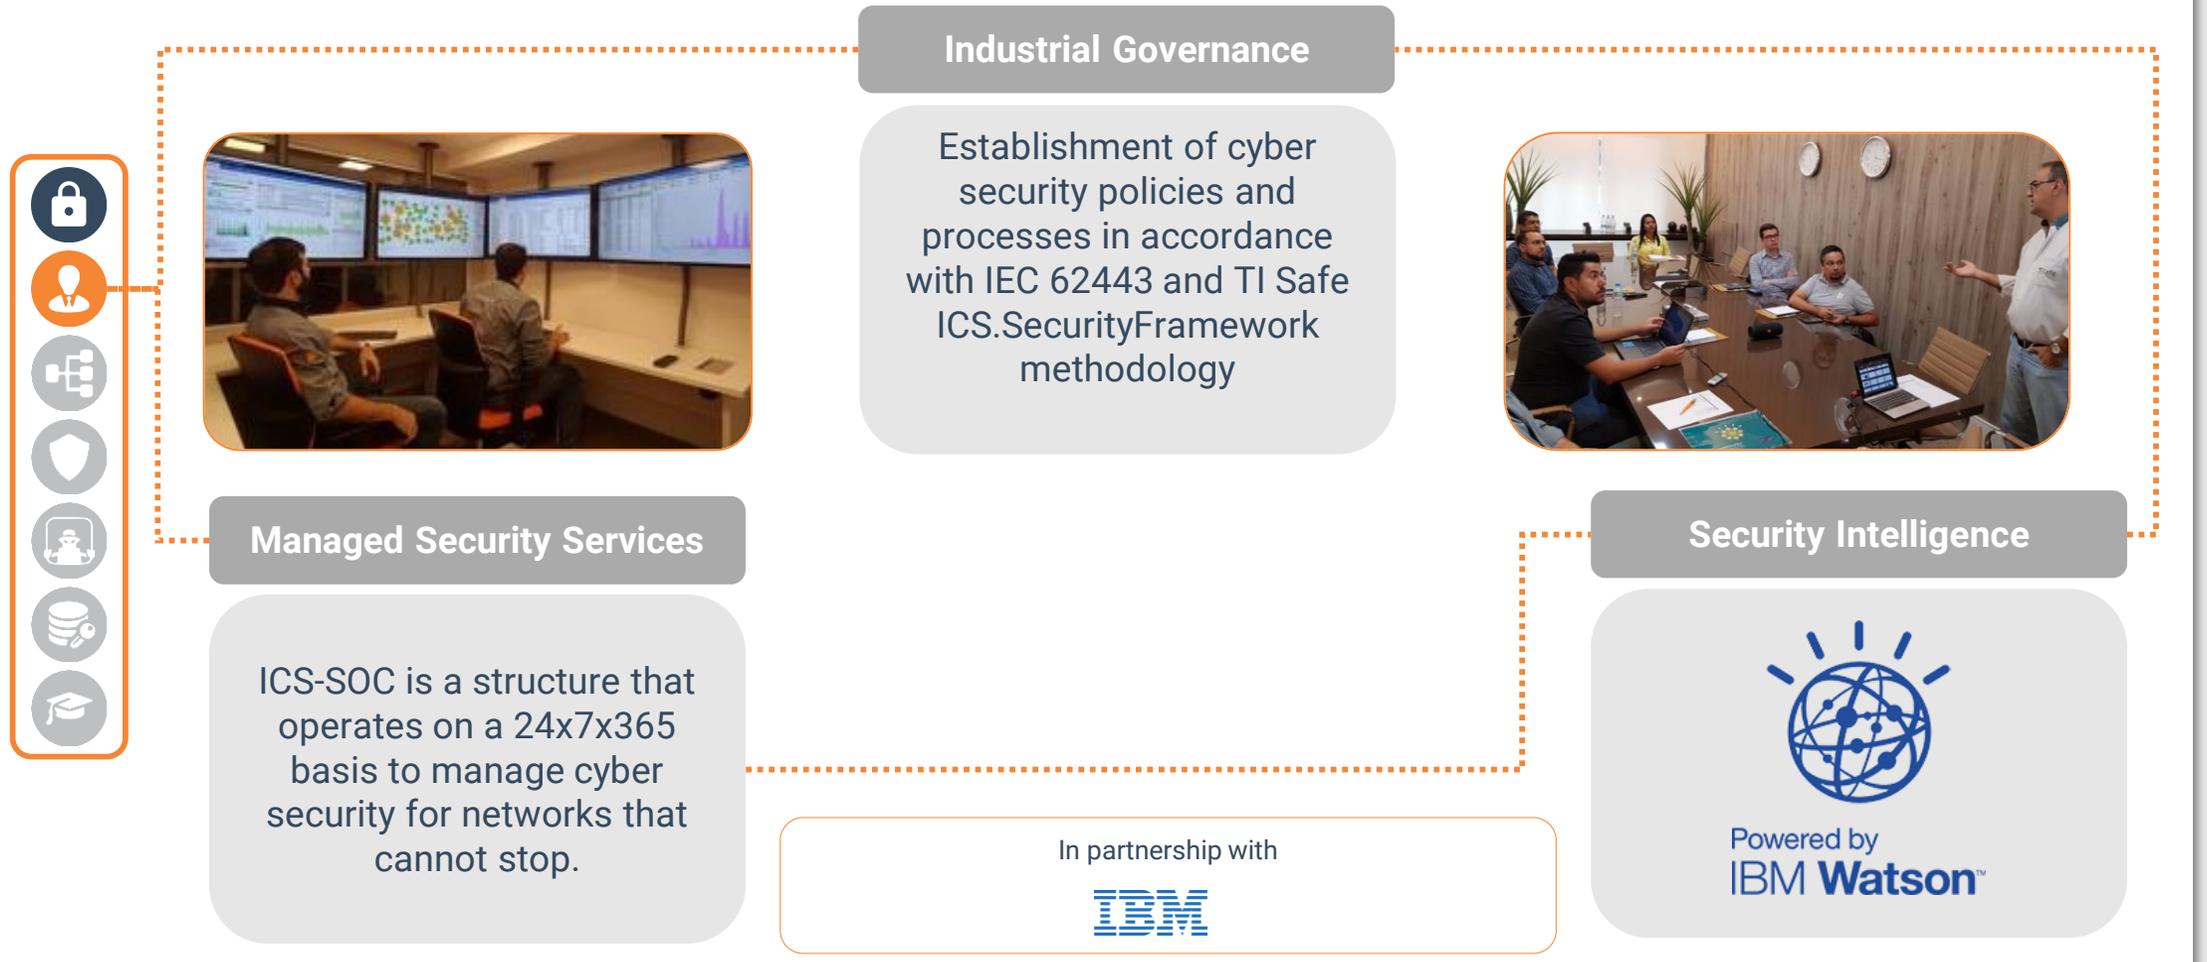

Document that consolidates risk assessment, establishes security objectives and structures project charters for the implementation of industrial security controls.

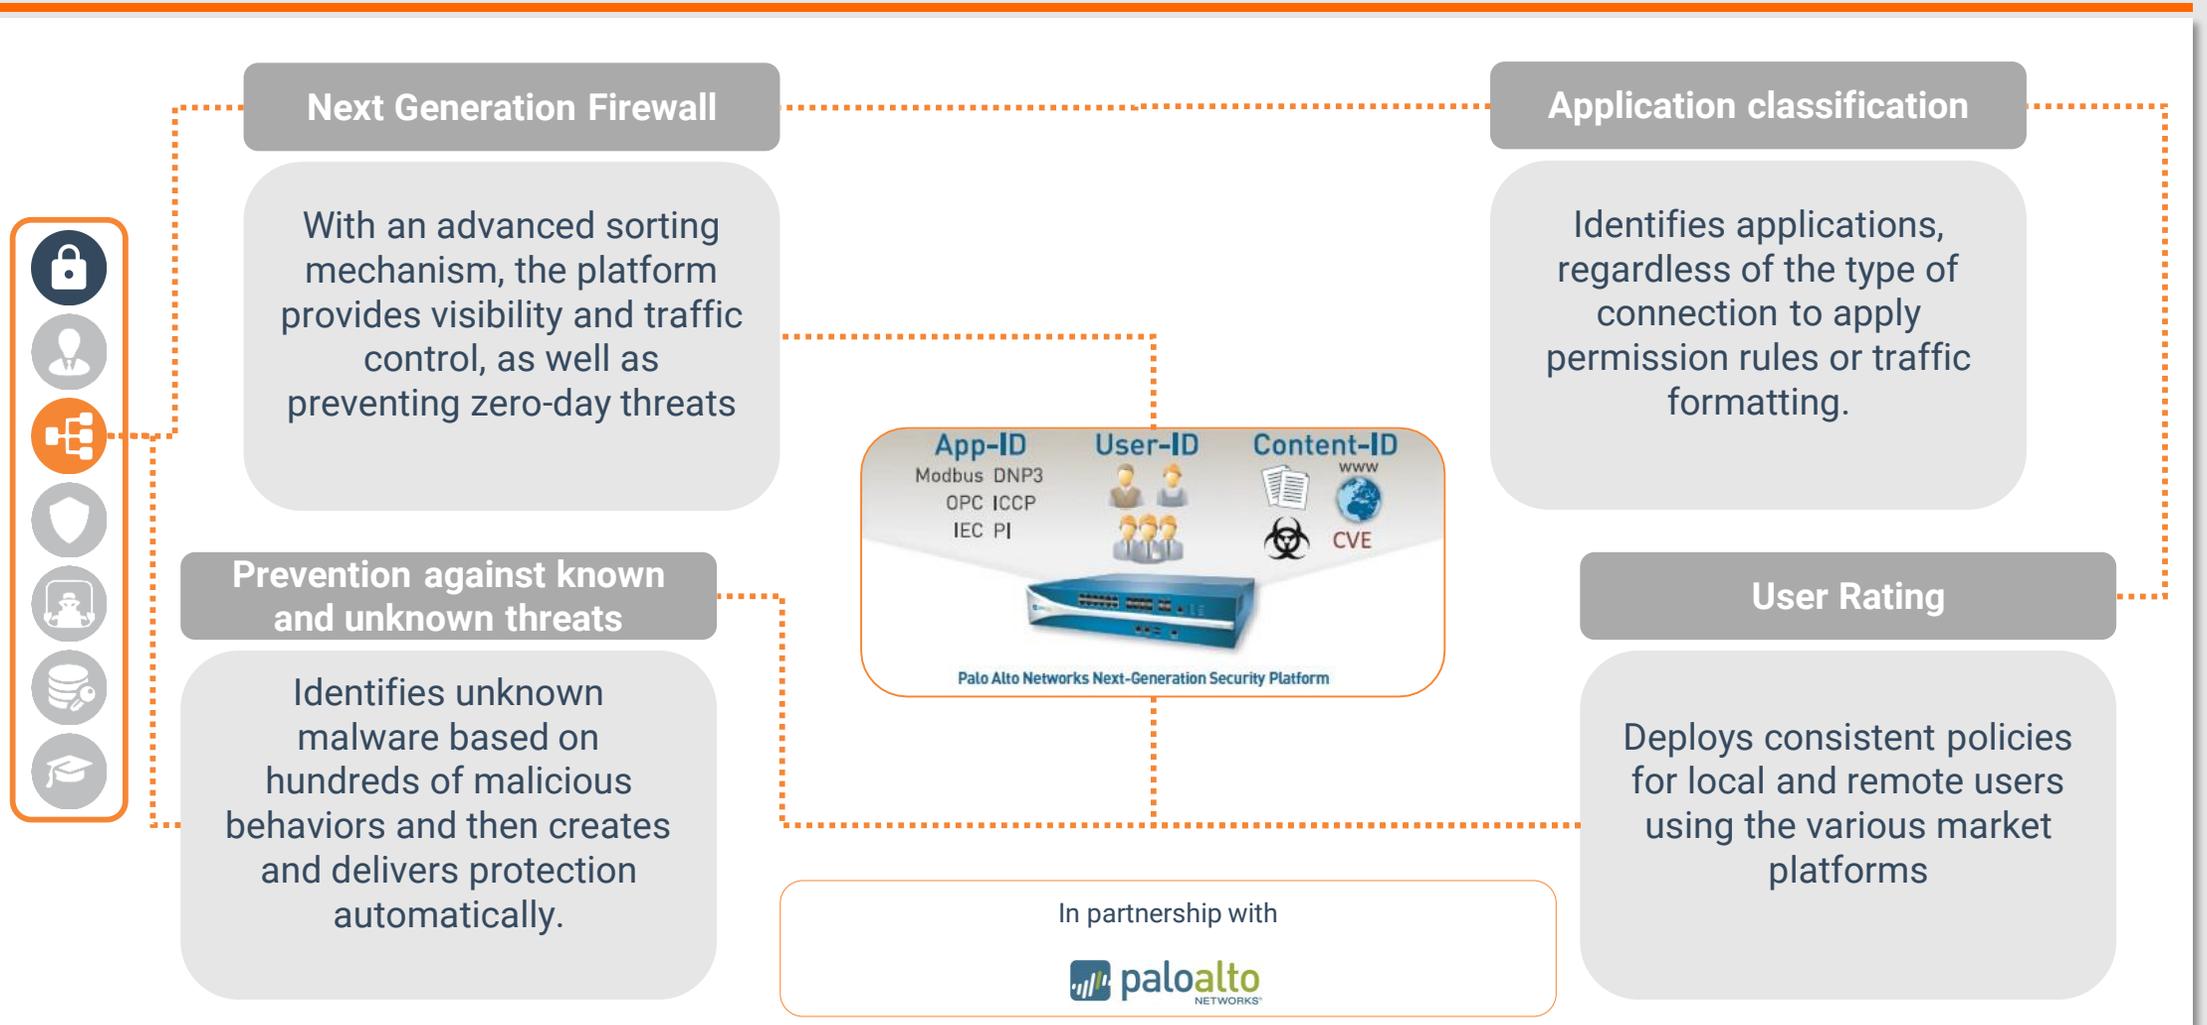

# Solutions

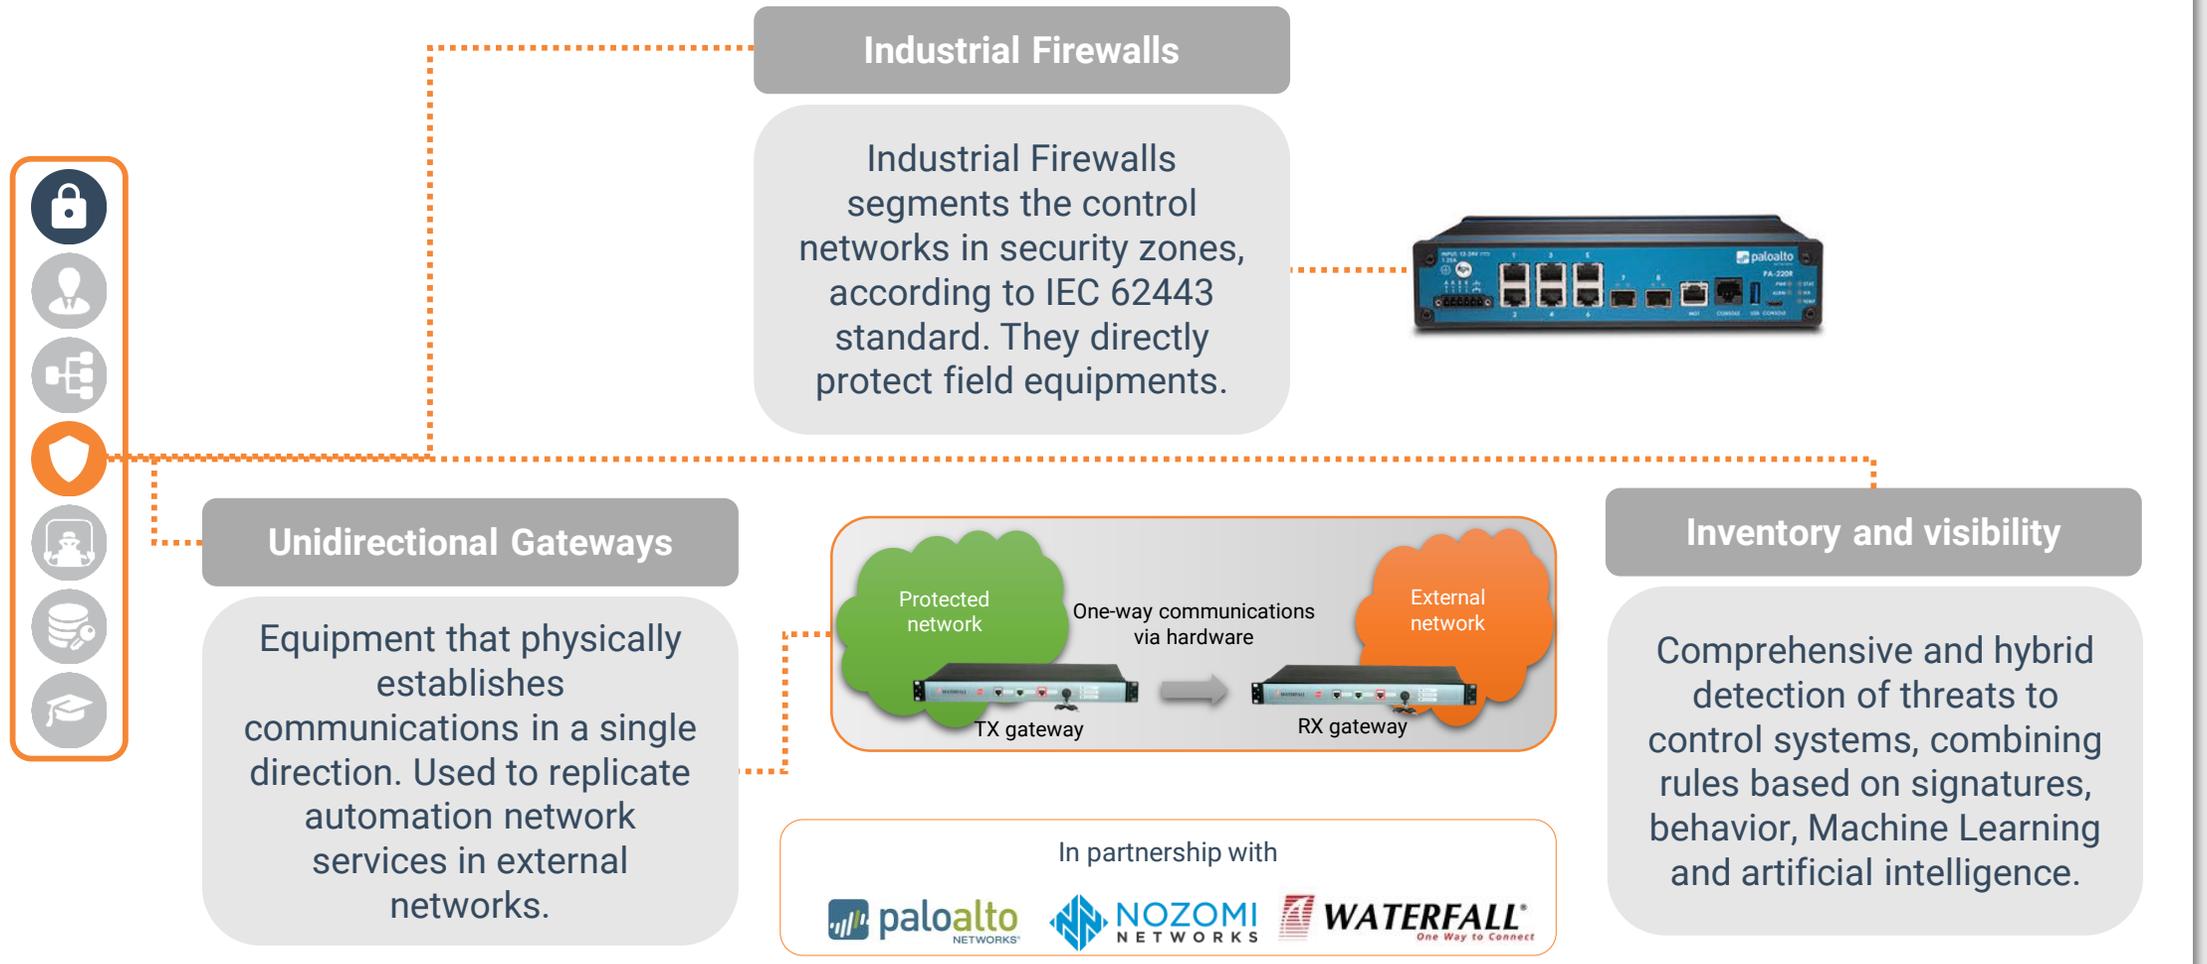

# Governance and Monitoring

# Edge Security

# Industrial Network Protection

# Malware Control

## Protection against infections via USB

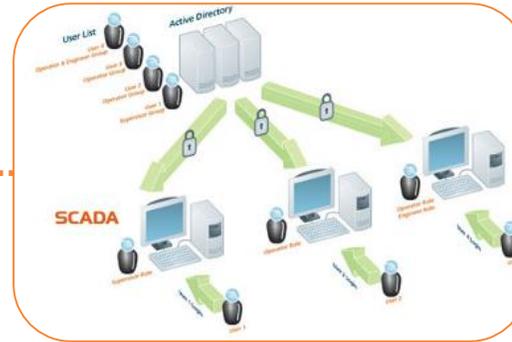

USB infection protection solution based on three components: Scanning station, scan agent and anti-malware system.

# Data Security

## Domain for Automation Networks

Domain and directory of users and computers elevate the security level by centralizing access control administration and policy management.

## Digital Certification

Digital certification allows the transfer of existing real-world credibility to the virtual environment.

In partnership with  
**gemalto**  
security to be free

## Secure Remote Access

Secure remote access to industrial environments should occur with the use of multiple authentication factors, with the use of a password integrated with physical or virtual tokens.
