

Standard Hydraulic Cylinders

The standard cylinders of Walter Hunger GmbH & Co. KG have been proving themselves in most varied applications and can be modified and complemented to meet the individual customer's requirements. The general programme contains the following items:

- Hydraulic cylinders in tension rod construction with piston diameters between 40 and 200 mm
- Hydraulic cylinders according to standard norms with lock ring and piston diameters between 40 and 200 mm
- Hydraulic cylinders according to Standard for structural steel engineering with screwed on head and bottom and with piston diameters between 40 and 320 mm
- Telescopic cylinders single-acting, multi-stage with stage diameters from 27 to 170 mm
