

Neadvance develops intelligent computer vision systems applied to quality control and automation of industrial processes. The knowledge and experience gained in modernising various industrial sectors, medical imaging and smart cities, enables Neadvance to make its solutions available in ten countries and four continents.

Neadvance intelligent systems include 2D and 3D dimensional and position analysis; colour and texture identification, measurement and recognition; character and pattern reading; defect detection and classification and robot guidance in several industrial processes.

OVERVIEW OF OUR SOLUTIONS FOR

AUTOMOTIVE

Intelligent Vision Systems

Intelligent Vision Systems

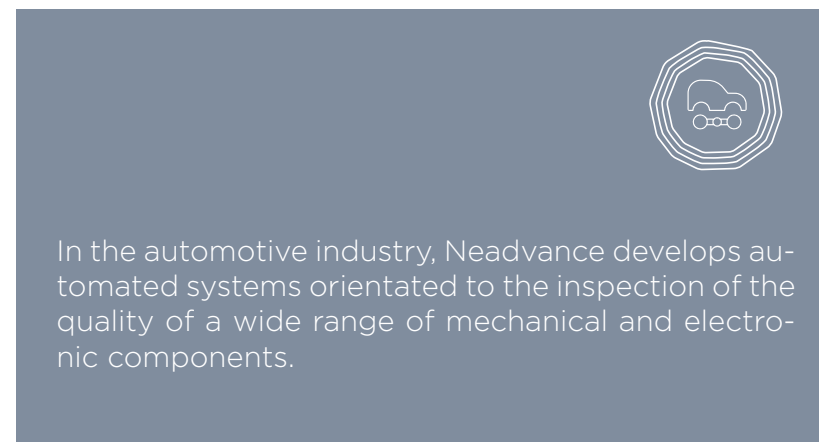

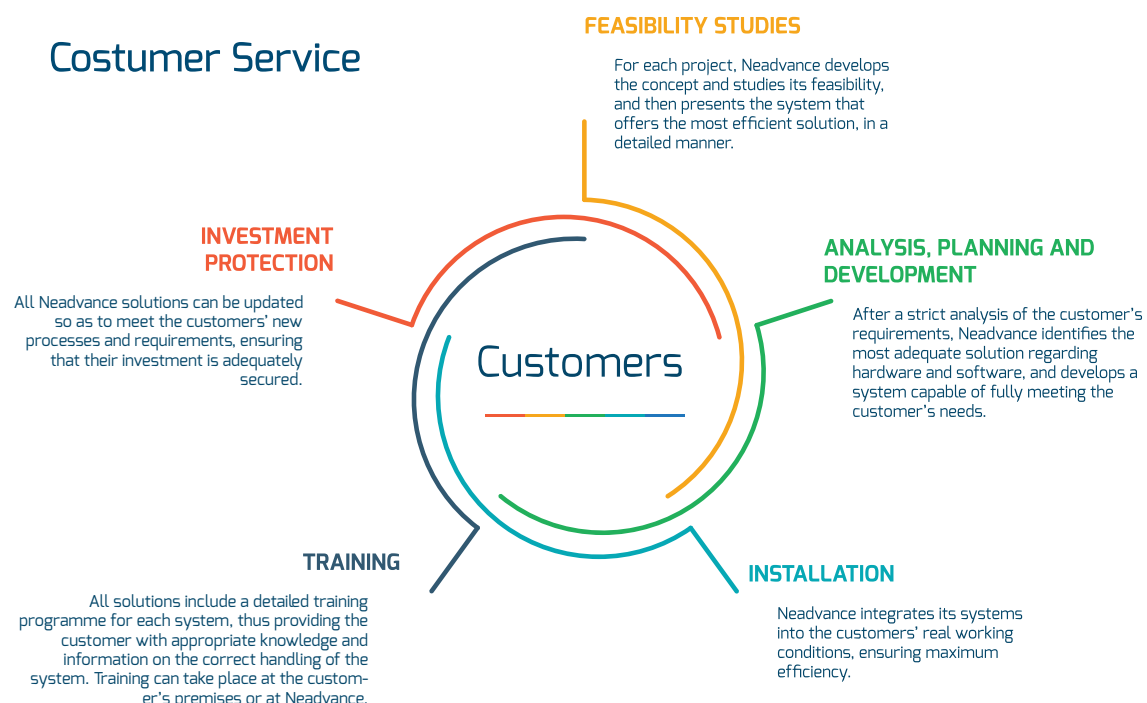

THE ADDED VALUE OF NEADVANCE'S SOLUTIONS

- Flexibility and reliability
- Durability. The products meet the customers' needs and evolve according to new challenges presented
- Possibility of acquiring more knowledge and control over the production processes, improving relevant actions
- Proprietary application library
- Constantly developing software with the latest innovations in the sector
- Strong connection with knowledge clusters
- Profound knowledge of production/ shop floor processes
- Compatibility with multiple hardware of different technologies
- With a single Neadvance solution it is possible to integrate and coordinate several functions simultaneously, overcoming time and space constraints in the optimisation of production processes

CUSTOMER SERVICE

We provide superior customer service from the initial research process in the project, till the 24/7 assistance by our well trained technicians, our super fast spare part service and our instant remote support.

In the automotive industry, Neadvance develops automated systems orientated to the inspection of the quality of a wide range of mechanical and electronic components.

Neadvance systems represent the vision and intelligence of robots while assembling components during the different production processes.
