

# *Micro-biological Odour Eliminator*

Product Information

*Bioactive  
micro-organisms  
naturally assist!*

—  
*Sustainable, preventive  
and in-depth effect*

—  
*Harmless to humans,  
animals & plants*

**Simply spray on! Our proactive micro-organisms do the rest!**

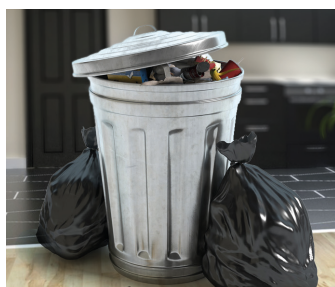

## Eliminates odours reliably and permanently

Everyone is familiar with the problem of persistent household odours that can be difficult to get rid of despite repeated cleaning, washing or airing. We have the biological solution that puts an end to this nuisance!

Based on active micro-organisms, *odoActive* works completely independently and without any mechanical support. The applied microbes are specialised in bio-degrading organic residues, i.e., in eliminating odour causes.

The preventive and odour-eliminating effect thus is noticeable within minutes.

*odoActive* must simply be applied to the areas where odours have their source. The micro-organisms contained in the product take care of the "rest".

### In-depth & thorough effect

*odoActive* odour eliminator does not just "cover" odours; thanks to its active microbes, it removes the organic surface residues causing the odour.

*odoActive* tackles virtually any odour caused by organic material, such as animal excrements, urine odours, rancid milk and mould odours, fermenting food and waste odours, etc.

### Eco-friendly & innovative

*odoActive* odour eliminator is a mild, fully natural and highly effective product. Purely biologically, the odour neutralisers eliminate even most persistent odours in areas that can otherwise only be accessed with difficulty.

The special *odoActive* formula has not only temporary and superficial effect, but sustainably removes odour causes.

### Gentle cleaning

*odoActive* odour eliminator gently cleans materials, without leaving unsightly stains or bleached marks on upholstery or floors, allowing you to apply this odour eliminator to sensitive materials with confidence. Proven through laboratory testing.

### Simple application

*odoActive* odour eliminator can be applied simply and easily: When sprayed on the odour source, the auto-active micro-organisms instantly get to work. In-depth cleansing of animal secretions, such as urine or other animal excrements, are completely removed from any kind of surface, even from highly absorbent ones.

## Important notes:

### Contents:

Active microbial cultures in a nutrient solution application-optimised with organic and mineral substances.

### Shelf life:

1 year; after opening: 3 months. Should be kept in a cool and dark place (ideally at 15-20°C). Protect from frost and heat!

### Application:

Pre-clean stained areas or containers. Apply a thin film on the source of odour from a distance of approx. 40 cm using the *odoActive*

500ml spray bottle (a distance of 10 cm using the 100ml spray bottle). Minimum exposure time 1 hour. No rinsing required. Ensure proper ventilation. Wipe off smooth surfaces after exposure.

### Scent

A discreet and perfectly harmless scent can be detected directly after application; it will fade after a few minutes and marks the exposure time. Once the scent has become neutral, the exposure period is completed.

### Please note:

Odour reduction can be delayed in the event of large temperature differences. Keep out of children's reach. Do not mix with other products. Do not inhale atomised spray. Recycle empty spray flask. Residues can be washed away with water. Organic product, harmless to humans and animals. Shake before use. No "air freshener!"

### Clearance Certificate

MWK-Bionik products are based on a mixture of natural substances and materials (active micro-organisms, secondary metabolites, nutrients and minerals) that are exempt from registration obligations. The products do not contain any hazardous substances or preparations and are not subject to classification according to the Ordinance on Hazardous Substances and / or EU Directive (EC) No. 1272/2008 [CLP] (Classification, Packaging and Labelling of Hazardous Goods, Substances and Preparations).
