SENSOR TECHNOLOGY

TORQSENSE®

Digital RWT410/420 series Torque Transducer

TorqSense Digital RWT410/420 series transducers with integral electronics now offer cost effective, non-contact digital rotary torque measurement, using Surface Acoustic Wave technology, suitable for torque monitoring, testing or controlling drive mechanisms. TorqSense RWT410/420 series transducers and their technology are particularly appropriate for OEM applications.

The new TorqSense RWT410/420 torque sensors replace the RWT310/320 series and feature all new electronics that have produced significant performance gains in resolution, frequency response, reduced sensor current consumption and faster digital data throughput. Transducer overload has also been increased to 300%.

Benefits

- Minimal shaft length - High shaft stiffness
- Low inertia – High Speed capability because electronics are not fixed onto shaft
- Non contact/brushless measurement
- High Bandwidth
- 300% safe mechanical overload
- High accuracy (0.25%) and resolution (0.02%)
- Excellent noise immunity
- Integral digital electronics
- Operates both statically and dynamically - clockwise/anti-clockwise
- Any full scale torque can be specified within standard range: 1Nm through to 13,000Nm
- Lifetime warranty

Consult factory for ranges greater than 13KNm
High speeds available on request

Technology

TorqSense patented technology is the measurement of the resonant frequency change in 'frequency dependent' Surface Acoustic Wave (SAW) devices, caused when strain is applied. The signal is coupled via a non-contact RF rotating couple from the shaft to a fixed pick-up.

Integral electronics enables the resonant frequencies to be measured and offer user selectable features, digital outputs and diagnostics. SAW devices are not affected by magnetic fields.

TorqSense RWT410 series transducers offer:

- Fixed voltage or current analog outputs (one for torque and the other for speed or power) for interfacing with analog instrumentation
- BIT Self-diagnostics for letting the manufacturer know that the transducer's torque, speed ratings and calibration due date have not been exceeded.
- Simple 'Sensor status' output pin
- Sensors to monitor shaft temperature for better compensation and accuracy

Whereas, TorqSense RWT420 series transducers offer:

- Digital outputs, such as RS232, CANbus and USB, for interfacing with modern instrumentation and laptops
- Digital input for configuring transducer via PC
- 2 x user selectable voltage or current analog outputs (one for torque and the other for speed, power or peak torque) for interfacing with analog instrumentation
- Transducer configuration software to allow user to changes transducer variables
- BIT Self-diagnostics for letting users know data is trustworthy, that the transducer's torque, speed ratings and calibration due date have not been exceeded
- Simple 'Sensor status' output pin
- Sensors to monitor shaft temperature for better compensation and accuracy
- Ability to connect up to 10 transducers using USB

TORQVIEW Software

TorqView is an easy to use advanced torque monitoring software, available to assist data recording and instrumentation displays that interface with Windows based PCs.
Features include: 3 types of display, text files compatible with Matlab and Excel and Real time chart plotting.
See TorqView datasheet for more details.

LabView VIs are available for users to design their own process control applications. DLLs are also available for users to write their own custom software.

US Patents: US5585571, US6478584.

RWT410/420 Series Torque Transducers - Data Specification

Parameter	Condition	Data							Units
RWT410/420 Torque measurement system									
Measurement method	Strain Dependent Surface Acoustic Wave Resonators (interrogated by an incremental electronic scanning method)								
Torque range	*(See Notes 1 & 2 below)*	0 – 1	0 – 1.1 to 0 - 20	0 – 21 to 0 - 100	0 – 101 to 0 - 500	0 - 501 to 0 - 2000	0 – 2001 to 0 - 13000		Nm
		[0 - 10]	*[0 – 11 to 0 - 200]*	*[0 – 201 to 0 - 1000]*	*[0 – 1001 to 0 - 5000]*	*[0 – 5001 to 0 - 20000]*	*[0 – 20001 to 0 - 175000]*		*[lbf in]*
Shaft size (diameter)		6	12	20	30	50	75		mm
Rotation speed/angle of rotation measurement system									
Measurement method	Opto switch through slotted disc								
Direct output signal	Pulse output direct from opto switch (TTL, 5V square wave), output is independent of any analog or digital processing.								
Digital Processing Techniques Processing modes run simultaneously and can be applied to either analog channel or accessed individually via a digital connection.	**Processing Method**	**Update rate for analog and digital outputs**							
	Mode 1 (Slow Method) Frequency Count	1							Hz
	Mode 2 (Fast Method) Period Count	0 RPM	1						Hz
		< 2000 RPM	RPM						
		> 2000 RPM	RPM x (1 / (⌊ (RPM - 1) / 2000 ⌋ + 1))						
Rotational speed (max)	*(See Note 3)*	30,000	20,000	15,000	12,000	9,000	6,000		RPM
Temperature									
Measurement method	IR temperature sensor monitoring actual shaft temperature								
Temperature accuracy		±1							^{0}C
Reference temperature, T_{RT}		20							^{0}C
Operating range, ΔT_O		-10 to +50							^{0}C
Storage range, ΔT_S		-20 to +70							^{0}C
Temperature drift (FS)	Max	0.05							%FS/^{0}C
Specifications									
Combined non-linearity and hysteresis		±0.25 (±0.5 for 2.5Nm and below)							%FS
Resolution		0.02							%FS
Repeatability		0.1							%FS
RWT410 Series Transducers ONLY									
Accuracy	20^{0}C, SM *(See Note 4)*	±0.25 (±0.5 for 2.5Nm and below)							%FS
3dB Bandwidth	*(See Notes 5&6)*	312 (default ave. = 16)							Hz
RWT420 Series Transducers ONLY									
Digital averaging	*(See Note 5)*	2	4	8	16	32	64	128	N
Accuracy	20^{0}C, SM *(See Note 4)*	±0.7	±0.5	±0.4	±0.25	±0.25	±0.25	±0.25	%FS
3dB Bandwidth	*(See Note 6)*	2500	1250	625	312	156	78	39	Hz
Analog output									
Output voltages (Torque/Speed/Power)		Options available: ±1 / ±5 / ±10 / Unipolar (RWT410 Series default setting is ±5Vdc) (RWT420 Series output voltages are user selectable)							Vdc
Load impedance		Maximum 1							KΩ
Output currents (Torque/Speed/Power)		Options available: 4-20 / 0-20 / 12±8 (RWT420 Series output currents are user selectable)							mA
4-20mA Loop resistance		Should not exceed 400							Ω
Digital output (RWT420 Series Transducers ONLY)									
Connections	CAN Bus		RS232		USB				
Configuration	CAN 2.0B, 11bit Message Identifiers		Data Bits: 8, Parity: None, Stop Bits: 1		USB 2.0 Full-Speed				
Baud Rate(s)	1 Mbps, 500 Kbps, 250 Kbps, 100 Kbps		115200 bps, 38400 bps, 9600 bps		12 Mbps				
Output Rate *(Note 7)*	Up to 10 KHz		Up to 1.1 KHz		Single Transfer	Up to 500 Hz			
					Bulk Transfer	Up to 10 KHz			
Power supply									
Nominal voltage, V_S		12 to 32 (max)							V
Current consumption, I_S		230 (max) @ 12 VDC							mA
Power consumption, W_S		3							W
Allowed residual ripple of supply voltage, V_{ripple}		500 (above nominal supply voltage)							mVp-p
Electromagnetic compatibility									
EMC compatibility		EN 61326:2006							

Note 1: Any torque/FSD is possible between ranges – please specify max rated torque.

Note 2: Max rated torque should not be exceeded.

Note 3: Please consult factory for applications requiring rotational speeds that exceed maximum figures given. Transducers fitted for IP65 will have running speeds considerably reduced, increased drag torque and accuracy can be affected.

Note 4: SM – Static Mode. Dynamic values will depend upon user application and has to be adjusted accordingly.

Note 5: Digital averaging can be configured by user to optimise accuracy/frequency response for specific user applications. Digital averaging default setting is N=16. For details see User Manual.

Note 6: >5Khz Sample Rate. Up to 10Khz sample rate possible, please consult factory. Digital averaging also affects the analog output, max analog output 3dB Bandwidth = 5Khz when digital average is 1.

Note 7: Output rate figures are calculated from the time taken to capture 10000 torque readings. Testing was conducted with each connection method configured at its maximum baud rate. The maximum output rate available for CAN and USB is dependant on the transducers setup. USB - USB is a host based bus architecture, because of this the output rate achievable will be affected by other bus traffic and host activity. USB has two transfer modes, Single Transfer which requests 1 reading at a time and Bulk Transfer which transfers readings in blocks of 50 Torque/Speed pairs. CAN Bus - to achieve a Torque reading output rate of 10KHz, the Speed reading output rate must be reduced to 100Hz.

Data parameters measured at +20°C

RWT410/420 Series Torque Transducers

Dimensions (1Nm to 100Nm)

RWT410/420 Series Torque Transducers - Standard Range

● – Standard feature ◇ – Optional feature

	RWT410/420 Series		Option Code	Remarks
Torque, Speed, Power Outputs	**RWT410**	**RWT420**		
Torque only	410	420		
Torque & Speed *(60 pulses/rev)*	411			*User to specify RPM/FSD when ordering*
Torque & Speed *(360 pulses/rev)*	412			*Not yet available*
Torque & Power *(60 pulses/rev)*	413			*User to specify Power/FSD when ordering*
Torque & Speed *(60 pulses/rev)* or Power		421		*Outputs are user selectable*
Torque & Speed *(360 pulses/rev)* or Power		422		*Not yet available*
Standard features				
Keyed Shaft Ends	●	●	K	*1Nm will have flats*
Voltage output ±5v FSD (Fixed)	●		B	
Voltage outputs from ±1v to ±10v FSD and unipolar (Variable)		●		*Output is user selectable*
RS232 output		●		
Torque Averaging and Torque Peak		●		
Self Diagnostics	●	●		
Internal temperature measurement	●	●		*Value available on RWT420 series only*
Deep grooved shielded bearings with oil lubrication	●	●		
Ingress Protection (IP) 54	●	●		
Optional features				
Plain Shaft Ends	◇	◇	P	*Shaft length will be longer than keyed end shafts – consult factory for length*
Voltage output ±1v FSD (Fixed)	◇		A	*In place of Option B*
Voltage output ±10v FSD (Fixed)	◇		C	*In place of Option B*
Customer Specified Voltage Output (Fixed)	◇		U	*In place of Option B. User to specify range/scale when ordering*
Current output 0-20mA (Fixed)	◇		D	*In place of Voltage output options*
Current output 4-20mA (Fixed)	◇		E	*In place of Voltage output options*
Current output 12±8mA (Fixed)	◇		V	*In place of Voltage output options*
Current output 0-20mA, 4-20mA & 12±8mA (Variable)		◇	F	*Current output is user selectable and in place of Voltage output. However user can reselect a Voltage output, if required. (Note 8)*
USB 2.0 full speed 12 Mbps Digital output		◇	G	
CANbus output		◇	H	*In place of RS232 ouput*
High Speed Bearings *(See Note 9 below)*	◇	◇	J	*Consult factory for maximum speed allowance.*
Sealed Bearings	◇	◇	S	
Ingress Protection (IP) 65 *(See Note 10 below)*	◇	◇	L	

Note 8: 2 x analog channels available. Default settings are Channel 1 (voltage/current) – torque. Channel 2 (voltage/current) – speed or power, if ordered.
Note 9: At very high speeds, for better balance the factory recommend plain or splined shafts.
Note 10: Transducers fitted for IP65 will have running speeds considerably reduced, increased drag torque and accuracy can be affected.

When ordering a Torque Transducer please note that any torque/FSD is possible between ranges – please specify rated torque and options using the following format:

For example: ***RWT***	***411 - 15Nm -***	***K-CL***	A 'basic' transducer with torque and speed outputs, rated and calibrated to 15Nm FSD with keyed ends, ±10v and IP65 protection.
Your transducer requirement: ***RWT***			
Max speed (if applicable)		RPM	
Connector & Lead options		(if applicable) *See over*	
Additional related products		(if applicable) *See over*	

Glossary of terms and definitions used in this datasheet

- ***Surface Acoustic Wave (SAW)*** - An acoustic wave travelling along the surface of a material having some elasticity, with amplitude that typically decays exponentially with the depth of the substrate.
- ***Strain dependent SAW resonators*** – A type of elastic SAW device, which changes its resonant properties when it is subjected to axial strain/compression. TorqSense uses this principle, which is protected by a number of patents.
- ***Incremental Electronic Scan (IES)*** – The most successful and precise method for interrogating strain dependent SAW resonators. The IES interrogation method uses a processor controlled frequency synthesiser to excite the SAW resonators over a defined range of frequencies and measure the reflected signal. TorqSense uses this patented method.
- ***Resolution of the IES method*** - The minimum measurable number corresponding to the stress/strain sensitive resonance point of the SAW resonator. The value is limited by following the factors:
  - frequency resolution of the synthesiser, which is 1000 times greater then overall resolution of the system.
  - relationship between frequency response and resolution. Increments of the resolution will proportionally decrease the system's frequency response. TorqSense systems are optimised for the best performance that suits most applications. However, on the RWT420 series models customers do have the capability to adjust the system performance.
- ***Frequency response of the IES method*** – The measure of the TorqSense system's response at the output to a signal of varying frequency at its input. The frequency response is typically characterised by the magnitude of the system's response, measured in dB. There are two ways of characterising the system's frequency response:
  - 0.1dB frequency range, where the output magnitude of the signal is different to the input magnitude of the signal by not more then 0.1dB (practically absolutely identical).
  - 3dB frequency range, where the output magnitude of the signal is 0.707 of the input signal. This is a common standard for most applications, unless it specifically says otherwise. This standard is also used to characterise the TorqSense system's frequency response.
- ***Accuracy*** - The degree of conformity of a measured or calculated quantity, which will show the same or similar results. Accuracy of the overall TorqSense system is limited by the combined error of several factors such as linearity, hysteresis, temperature drifts and other parameters affecting measurements. If errors in the system are known or can be estimated, an overall error or uncertainty of measurement can be calculated.
- ***Digital averaging*** – The application of algorithms to reduce white noise. In any electronic system, electronic white noise is mixed with the signal and this noise usually limits the accuracy. To reduce the influence of white noise and increase the accuracy of the system different averaging algorithms can be applied. In the TorqSense system a flying digital averaging technique is applied to reduce the white noise commensurate with the level of accuracy required. However, as any averaging algorithm works as a low pass filter, the more averaging that is applied the lower the frequency response. Therefore, each Torqsense system should be optimised to the customer's requirements by choosing the right combination of accuracy/frequency response. Please see relevant part of the Datasheet and User Manual.
