

CYBERSPRINT
BREAKTHROUGH SECURITY

DO YOU KNOW YOUR ONLINE FOOTPRINT?

Knowing your entire online footprint is essential for managing Cyber Risks and protecting your organisation's brand.

We make sure your online presence and reputation is more secure and help you to not become next week's negative news story.

OUR DIGITAL RISK MONITORING PLATFORM OFFERS

Continuous, real-time insight

24/7 insight into the entire online attack surface of your organisation.

Immediate vulnerability detection

Security risks are detected automatically and displayed on the dashboard within the platform.

Automated risk analysis

Risks are categorised and analysed. The platform initiates remedial actions.

Industry-specific compliance reporting

Real-time dashboarding tailored to global and local industry compliance standards.

ISO27001, NEN7510, BIG, BIR, ISAE3402 & European Privacy Directive (GDPR).

Password leaks / leaked data files

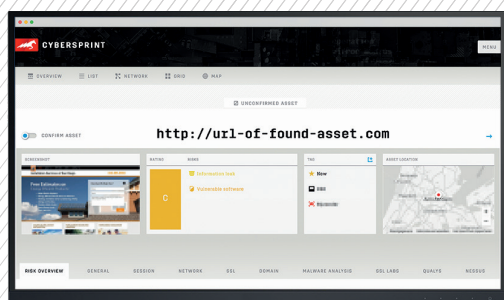

- › Search & takedown dataleaks related to your organisation
- › Find password leaks related to your employees
- › Detect "doxing" through pastebin and other data dump websites
- › Discover counterfeit products

Digital Risk Monitoring platform

Where hidden breaches become visible

A Footprint Discovery

Real-time insights into the digital footprint and possibly malicious assets. Footprint includes hidden entry points into your organisation like fake accounts, rogue apps and phishing websites.

B Risk Assessment

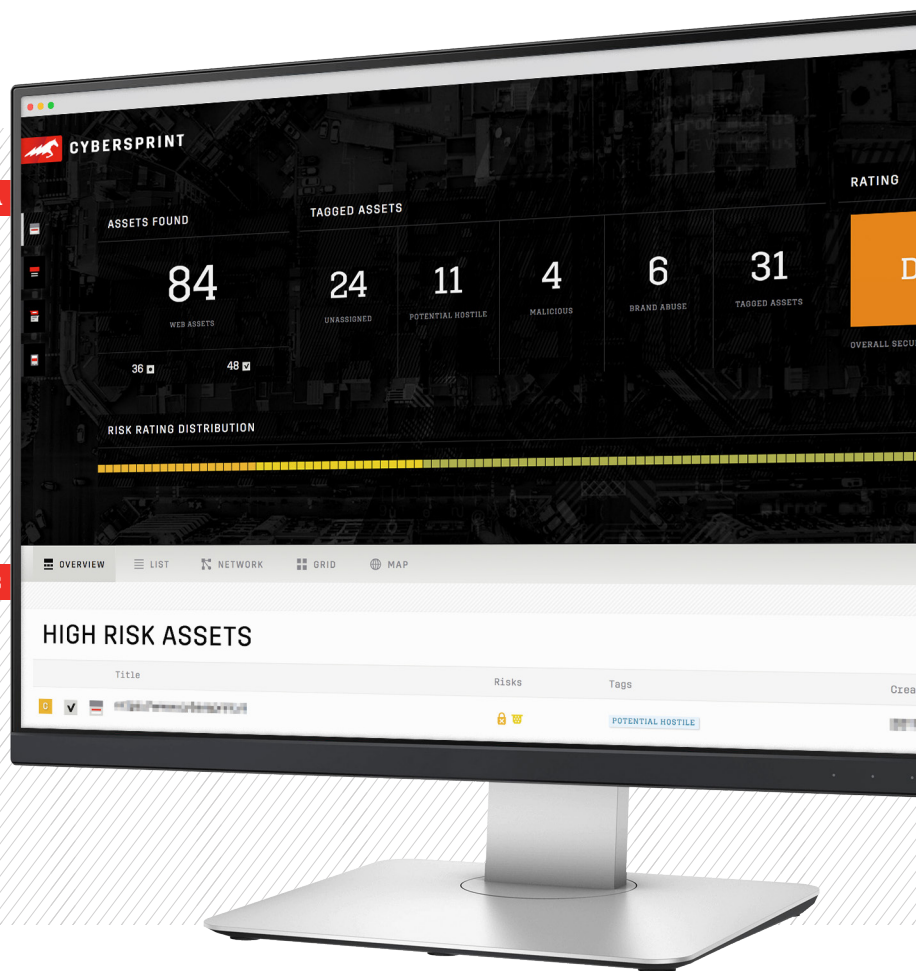

Assets are assessed based on the risk they pose to your organisation. This rating allows you to prioritise remedial actions.

C Visualisation

Advanced digital footprint visualisations allow insights into relationships between the organisation and third parties, supporting both management and security teams in their security & vendor strategy.

D Actionable Data

Contextual information such as advice on remedial actions, allows quick resolution of the risk. Create workflows for handling the discovered assets and threats.

CYBERSPRINT CLIENTS INCLUDE

Financial institutions

Critical infrastructure organisations

Governmental institutions

70% of our clients discovered that more than 20% of their online attack surface was hidden and not visible to the organisation itself. These invisibilities create the biggest risks for your online branding and security.

What makes us unique?

For a large financial institution we have found 30% more assets than our largest competitor // 20% of phishing sites we found had not been discovered yet // Our unique platform provides real-time insight & automated analysis of risks // We employ the best, prize-winning hackers 🦋

Europe's first Digital
Risk Monitoring platform
