

## Hannover Messe: Dassault Systèmes demonstrates how fully connected business processes become reality

- Dassault Systèmes enables sustainable innovation, value creation, and business efficiency.
- The 3DEXPERIENCE platform forms the core of this by transforming the entire supply chain into value-added networks, improving processes and making know-how accessible.
- Changing perspectives creates new perspectives so that businesses can make the most of the industrial renaissance.

[Dassault Systèmes](#) will show at the [Hannover Messe 2019](#) from 1 to 5 April, how companies can use a central platform to implement digital business models, drive innovation and decisively increase their efficiency. Dassault Systèmes considers companies as a whole, and with the [3DEXPERIENCE platform](#), helps them optimize their development and manufacturing processes along the value chain.

[Dassault Systèmes' booth K30 in Hall 6](#) will provide visitors with insights into application examples from customers and partners who are already successfully using the 3DEXPERIENCE platform. The benefits are manifold: deploying the platform enables organizations to deliver sustainable innovation to consumers by enabling them to turn the entire supply chain into value-added networks. By linking virtual worlds and reality, the 3DEXPERIENCE platform improves operational processes and enables better results. In addition, shared and accessible knowledge and know-how creates long-term benefits for employees.

"Our big goal is to provide our customers with the added value of the 3DEXPERIENCE platform," said Klaus Löckel, Managing Director of EuroCentral at Dassault Systèmes. "The renewed upheaval of the industry that we are experiencing today is much more than the digitization of the past. It offers many opportunities to drive innovation and enhance reality through virtual worlds. This year's Hannover Messe will be an opportunity to work with our partners to showcase how Dassault Systèmes solutions pave the way for a digital future. We are demonstrating how new perspectives can be created through changing perspectives that allow users to plan innovative ideas, implement them successfully, and thus exploit the full potential of the industry renaissance."
