

Panasonic has a new German Distributor: AMSYS

Panasonic is celebrating its 100th birthday and is taking AMSYS as a competent partner for pressure sensors on board. Besides the well-known consumer products Panasonic also offers a broad range of electronic components and sensors. The DP-0 and DP-100 series of pressure switches are now being offered in different types by AMSYS GmbH & Co. KG located in Mainz, Germany.

The new pressure switches of the DP-series are ideally suited for air pressure monitoring and control in industrial applications. In addition to the functions of a sensor a pressure switch can control connected equipment depending on the pressure values in numerous ways. Such pressure switches are available as OEM-sensors and now also as ready-to-use controllers as in the case of Panasonic's DP-series.

New from AMSYS: Panasonic pressure switches DP-100 and DP-0

The switches are available with a pressure range of either -1 to +1 bar or -1 to +10 bar. Up to two outputs and different switching modes allow a wide variety of monitoring and control tasks meeting most applications. The Panasonic pressure switches are characterized by their miniaturization and ease of use, i.e. wide angle display and buttons with a distinct working point and complement AMSYS' selection in the range of pressure sensor technology.

AMSYS is a German medium-sized company offering a comprehensive range of sensors. In addition to moisture, inclination and temperature detection AMSYS specializes in analog and digital pressure sensors for all types of pressure (absolute, differential and differential) from 5 mbar up to pressures of 800 bar. The product range extends from the measuring cell, through OEM sensors and transmitters, to wireless sensor solutions and now also pressure switches.
