

## Startups on EPFL booth

	<a href="#">Aeler</a> is an AI-driven company building the technologies to automate in-transit freight logistics with focus on robust data collection for predictive and prescriptive analytics of the end-to-end supply chain
	<a href="#">Datapred</a> is an industry-strength machine-learning suite for time series, providing unparalleled speed, flexibility and performance for time-dependent analytics challenges
	<a href="#">Inpher</a> is a platform for secure cloud services, privacy-compliant analytics and AI applications across organizations and jurisdictions.
	<a href="#">Kandou Bus</a> improves overall performance of semiconductors, unlocking new capabilities in electronic devices and systems
	<a href="#">Largo</a> develops new models for the movie industry with its cutting-edge technologies enabling data-driven moviemaking.
	<a href="#">Miraex</a> provides cutting-edge IoT technology to capture the imperceptible vibrations of machines and prevent asset failure before it happens, in the most demanding environments.
	<a href="#">Neural Concept</a> is the first 3D Deep Learning Software as a Service platform dedicated to Computer Assisted Engineering and Design.
	The <a href="#">Olympe</a> platform empowers Business and Tech to create collaborative software systems on the fly.
	<a href="#">RAW Labs</a> build your virtual data lake on the fly and query any type of data in real-time (AI-based platform)
	<a href="#">ScanTrust</a> enables brands with smart packaging solutions for product authentication, supply chain traceability and consumer engagement
	<a href="#">Vidinoti</a> is specialized in the development of Augmented Reality technologies, specifically targeting mobile devices.
