Highly productive machine tools for machining

Hochproduktive Werkzeugmaschinen für spanende Bearbeitung

Clever solutions through technological competence

Clever solutions through technological competence

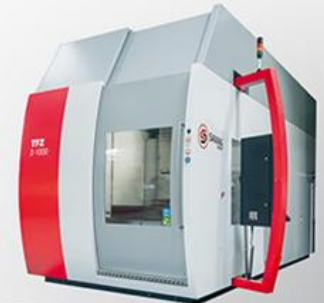

WBM

Produktionstiefbohrmaschinen (1 – 6 spindlig)
Deep drilling machines for mass production (1 – 6 spindle)

MFZ

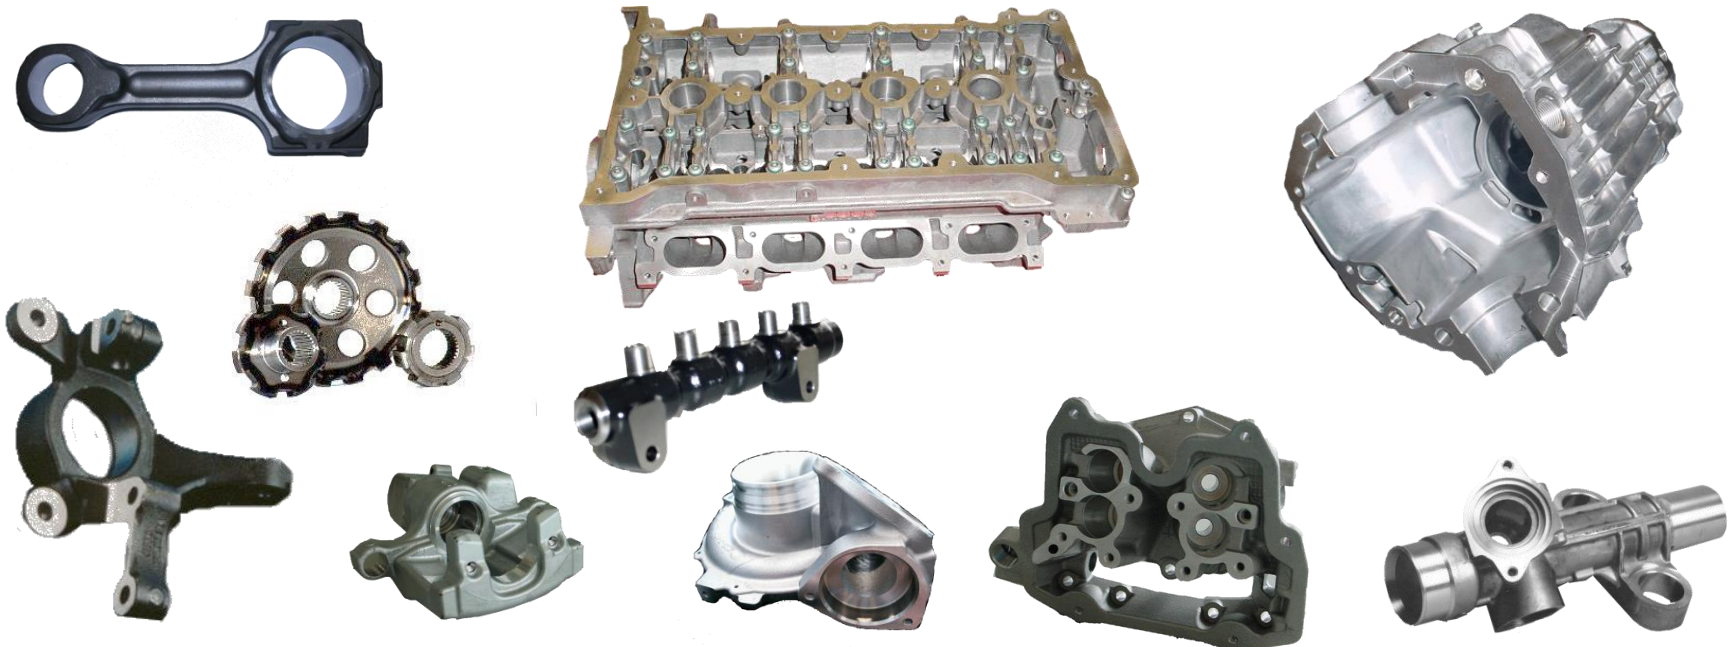

Mehrspindlige horizontale Bearbeitungszentren (2 – 4 spindlig)
Multispindle horizontal machining centres (2 – 4 spindle)

TFZ

Tiefbohr-Fräszentren
Deep drilling-milling centres

Sample parts for MFZ multi-spindle machining centers Teilebeispiele für mehrspindlige Bearbeitungszentren MFZ

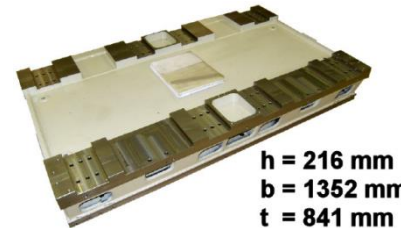

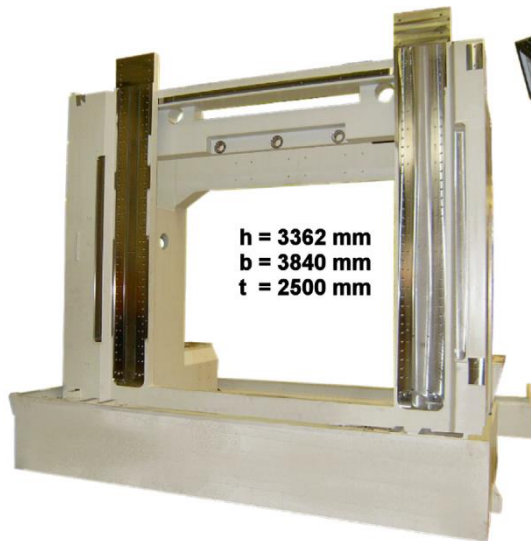

Complete machining at SAMAG machining center in large-scale production

Prototype and small-scale production as a service

Complete machining of **high precision** components as prototypes, single items or small series to 8000 mm including installation of simple assemblies to complex function units in the Machine Tools division as in-house and external cooperative service provider for all branches of industry

Machining of large components (cutting to size, joining, coating, machining)

Powertrain - parts in perfection:

From material selection to prototypes and pre-production run all the way to mass series production
 Process competency and system responsibility to the benefit of the customer

Crankshaft bearing cover

Ratchet wheel

Parking lock pawl

Crankcase cover

assembly Turbo charger

assembly Steering knuckle

Camshaft bearing cover

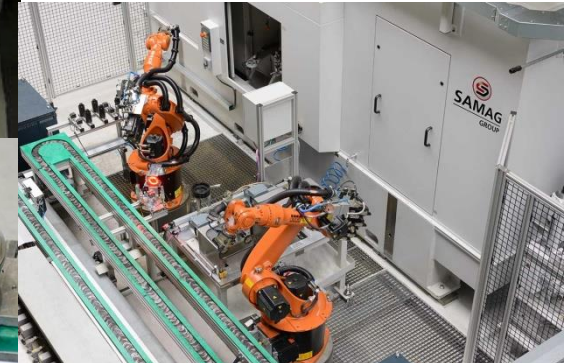

Differential housing

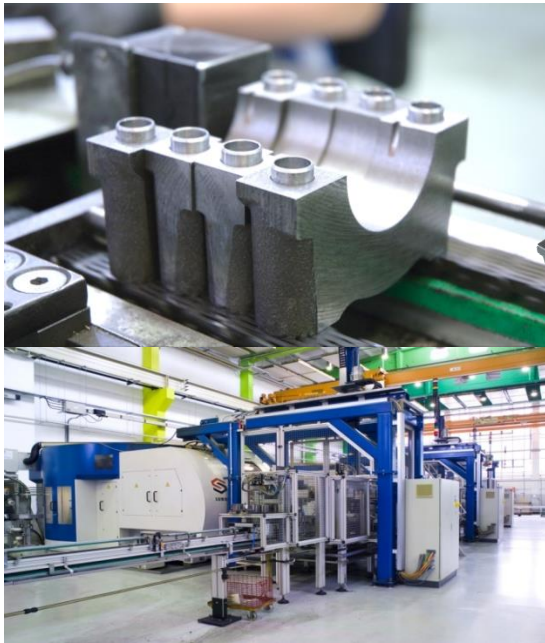

assembly Ratchet wheel

Complete large-scale machining of differential housings Großserienkomplettbearbeitung von Differentialgehäusen

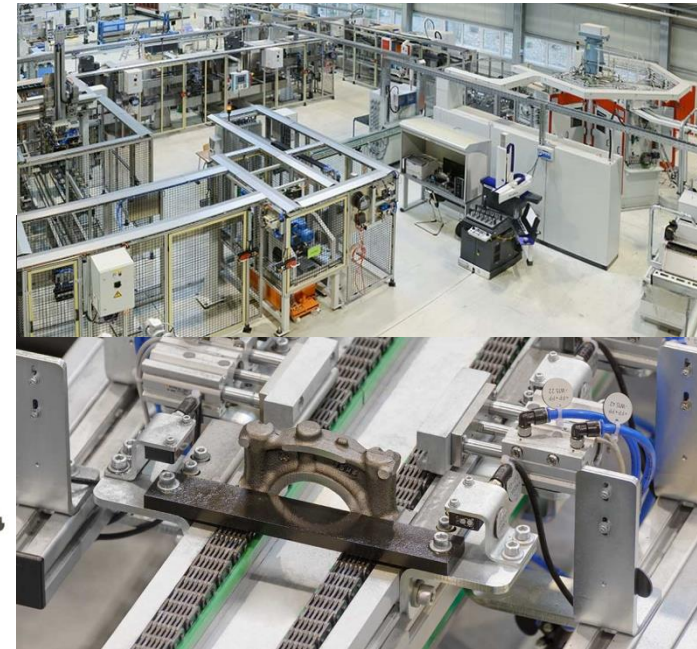

Large-scale complete machining of crankshaft bearing covers

Großserienkomplettbearbeitung von Kurbelwellenlagerdeckeln

in the block with separation to individual covers

or individual machining

System assemblies for commercial vehicle & industrial applications:

The whole process chain of sheet metal, profile and pipe machining including coating in one plant, from the initial feasibility study and design to prototypes and serial production.

Precise and innovative machined parts as well as components

Efficient and highly flexible partner for turned, milled and broached parts

Components for chassis, axles and steering

Our strengths – your benefits

SAMAG GROUP – a strong and innovative consortium

- With state of the art technologies in cutting and non-cutting machining
- Optimized and competitive organizational and cost structure
- Development partner

Synergy effects through symbiosis of mechanical engineering and serial production of components

- Complex new projects are jointly implemented
- Advantage of expertise and high flexibility in problem solution
- Development and construction of machines and systems tested in large-scale production
- Permanent in-house exhibition for our mechanical engineering
- Very short response times for machine malfunctions and failures
