dtmMANAGER development suite

FDT
dtmMANAGER
development suite

dtmMANAGER|Description

The *dtmMANAGER development suite* is a robust development environment for device, gateway and communication DTMs for FDT® 1.2.x and FDT2. DTM user interfaces can be created using different technologies. The development of custom DTMs is much easier and more efficient than from scratch. For FDT2 *dtmMANAGER* bundles the certified DTM Common Components from the FDT Group. The development toolkit contains tutorials that will ease you into FDT Technology and DTM development.

M&M|About Us

M&M is the competent service provider for all matters concerning software products in the industrial automation. Our service portfolio includes Management & Technology Consulting, Software Development, Quality Assurance, IT Operations & Services and Software Maintenance & Support.

→ dtmMANAGER|Features

- Easy to develop state-of-the-art user interfaces according to the DTM style guide
- Supports DTM development using C++ (FDT 1.2.x) and .NET (FDT 1.2.x & FDT2).
- Support for communication, gateway and device DTMs
- Development of the DTMs for FDT 1.2.x and FDT2
- Includes certified DTM Common Components
- DTM development tutorials and programmers guide
- Supports multi-lingual graphical user interface
- Built-in support for various communication protocols
- Wizards for Visual Studio
- Provision of new releases and service packs with delivery via download
- Support by phone and email available
- Workshop available

→ dtmMANAGER|Advantages

- Hides the complexity of FDT
- Fast and easy introduction to DTM development
- Prevents many certification related mistakes during development
- Mature and field proven product
- Saves time by eliminating routine tasks during development
- Continuous maintenance and support available
