

MOTIVATION

Niedersachsen wants to become a pioneer in additive manufacturing. To achieve this goal, Niedersachsen ADDITIV was founded on July 1st, 2017, with the support of the Lower Saxony Ministry of Economics, Labor, Transport and Digitalization .

FOCUSES

Research

Identifying innovation potential, developing suitable new processes, materials and systems and transferring them directly to the Lower Saxony industry. These are our goals.

Demonstration & dialogue

In workshops and seminars we show how components can be manufactured additively and transfer the necessary know-how to industrial users.

Network

At information events, congresses, industry and network meetings as well as at trade fairs we network stakeholders from industry, research and associations.

CENTRAL POINT OF CONTACT FOR SMEs

With about 344,500 companies, small and medium-sized enterprises (SMEs) are a crucial structural component in Lower Saxony. Additive manufacturing offers SMEs great potential for improved processes and products. As a central point of contact, Niedersachsen ADDITIV advises and supports these companies in the introduction of additive manufacturing processes.
