

Guide plates 导轨板

导轨板主要用于降低机床、铣床等机械加工设备的轨道摩擦，并提高加工精度。

Guide plates are mainly used for reducing the track friction of machining equipment such as the machine tools and milling machines, as well increasing processing precision.

Guidance tapes 导向带

导向带用于缸体中防止缸筒与活塞杆磨损。具有耐磨、低摩擦、耐热、耐化学腐蚀，并吸收振动的性能。

Guidance tapes are used in the cylinder to avoid the abrasion between the cylinder barrel and piston rod. It is characterized by the wear resistance, low friction, heat resistance, chemical resistance, and vibration absorbing properties.

Red chrome plate 铬红板

用于各种仪器仪表的衬托板。

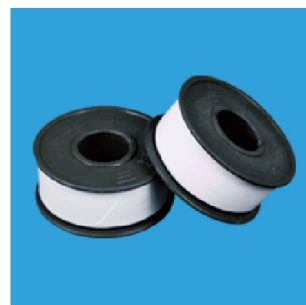

Red chrome plates are used as bearing plates of various instruments.

PTFE tape 生料带

聚四氟乙烯生料带（PTFE生料带）是一种耐腐蚀、耐高温的优良密封材料，可用于水管、腐蚀性流体输送管材、蒸气管路接头的密封材料。

PTFE tape is a kind of corrosion resistant, high temperature resistant excellent sealing material, and it can be used for pipes, corrosive fluid conveying pipe, steam pipe joint sealing material.

High temperature plugging glue stick 高温堵漏胶棒

高温堵漏胶棒用于高温高压密封，在不影响装置正常运行的条件下进行堵漏密封。

High temperature plugging glue sticks are used for high temperature and high pressure sealing and plugging seal without the condition of affecting normal operation of device.
