

Check rings 挡圈

该产品主要是可以防止O型圈发生形变并确保密封性能，是安装在液压油缸活塞O型密封圈端面的密封装置。

The product is mainly to prevent the deformation of the O ring and to ensure the sealing performance, it is the sealing device that installed on O sealing ring end of hydraulic cylinder piston.

Gaskets 垫片

该产品是广泛应用于管路的密封产品，采用多种材质用于不同温度、介质、压力、绝缘要求的工作环境中。我公司各种尺寸的多台数控车床可生产加工Φ3500mm以内的各种类型垫片。

The products are mainly widely used sealing products made of different materials for various working environments and different requirements such as different temperature, media, pressure and insulation. We have many different size of CNC laths which can produce and process various types of gaskets with diameter up to Φ3500mm.

Stepseals 斯特封

斯特封用于高压油缸中往复运动的活塞密封，安装在缸壁与O型圈组合使用。通常为聚四氟乙烯与铜粉等材料混合制成。

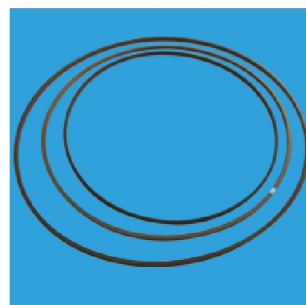

Stepseals are used for the sealing of the piston rod reciprocating in the high-pressure oil cylinder. They are installed in the cylinder wall and used with O-rings. They are usually made from mixing of PTFE and copper powder.

Glyd rings 格莱圈

格莱圈用于高压油缸中往复运动的活塞导向的密封，安装在活塞上，与O型圈组合使用。通常为聚四氟乙烯与铜粉等材料混合制成。

Glyd rings are used for the incongruous sealing of the piston rod reciprocating in the high-pressure oil cylinder, installed in the piston and used with O-rings. They are usually made from mixing of PTFE and copper powder.

Irregular parts 异型件

我公司根据用户特殊的使用环境、使用工况和使用形态制造出非常态形状的特殊制品。

Our company may manufacture special products in irregular shapes according to special application environments, conditions and forms.
