

Cluster Umwelttechnologien.NRW

The environmental technology cluster builds up the innovation capacities and creates a common identity for the environmental technology sector in NRW. At the same time it supports the GreenTech industry in international marketing activities.

It offers a state-wide platform for the more than 3,500 companies in NRW's GreenTech sector and brings together players from all the different technological fields and along the value chain. The basics for this platform are e.g. an innovation radar and a joint database with companies and research institutes. In addition it works with a communication concept that includes events aimed at specific target groups and the initiation of cooperation projects.
