

Advantage KATO Tangless inserts

1. Bi-Directional design, no need to orient the insert for installation.
2. Quick and non-destructive insert removal and depth adjustment, reusable.
3. Increased efficiency reduces production costs.
4. No tang to break off: no damage to insert or work, no debris.

KATO Tangless and tanged inserts are used extensively in automotive applications, such as engines, gear boxes, fuel systems. The KATO Tangless, FOD-free design is the preferred standard for optimum thread assemblies in new fastening system designs.

Available in a wide range of materials, for example but not limited to 304 stainless steel, Nitronic-60 and Phosphor Bronze.
