Icontrack

IF01

Interface USB a PC + Software

The Icontrack temperature datalogger is configured connecting to a PC via the IF01 interface and with a cable to any USB port on the computer. The interface has two USB type B outputs, one is for the data output to the computer and the other for an internal memory.

Software. The management program is contained in a USB drive inside the interface. It can be updated by downloading it from the web and storing it in the same interface. This way it can be installed on any PC and always the most current version.
