

> Precision punching from coil

Customized solutions from idea to mass production

Mekoprint A/S offers precision punching with automatic feed from coil. Our skilled employees can with their experience, knowhow and expertise, ensure our customers the right solution for both simple and complex products.

Precision punching from coil lines provides geometric freedom and competitive prices.

Effective punching tool

The punching technology offers great benefits, as it through the high stroke volume of up to 950 beats per minute achieves great efficiency and high output. The design options are many, because in a combination of embossing, punching and bending in the same tool, only the imagination sets the limits.

Materials

Our deep understanding of the various advanced materials ensures high technical advice regarding materials selection.

We offer precision punching in all standard materials, such as stainless steel, steel, aluminum, nickel plated copper, brass and tin coated coil from 0.1 to 1 mm.

Competitive products

Precision punching from coil lines creates competitive products, as it typically involves low unit costs and quality uniformity. No matter what series size and degree of complexity is needed, each product is always produced with focus on quality, finish and compliance with tolerances.

Vision control systems

With our optical measurement technology from the German manufacturer, "GOM" we can measure micro parts and secure that the items are according to the specifications. The system is excellent from measuring complex geometries such as curved surfaces and inner curves.

We deliver more than a product
when we create customer specific solutions together

Improved value by optimizing product design for use and manufacturing.

Reduced supply chain with automated processes and quality requirements.

Optimized time to market with rapid prototyping and short production lead time.

> Focusing on Improvements

by cost-efficient production methods

We are available with sparring and optimization within the design phase through the prototype manufacturing to the finished product. Throughout the many years of partnerships with our costumers, we know the importance of making simple but optimized solutions, that are created precisely for the customers needs.

Construction & Design

We produce each item specifically for the customer, and will be available with advice on design, construction and development, to create the ideal solution together.

Flexible Lean Production

We focus heavily on Lean, thereby achieving an optimized production process with a high level of flexibility and efficiency for our customers.

Quality Assurance

A high quality level is crucial for our customers. Therefore, with the state of the art measuring equipment GOM Vision Sytem, our own quality management team assures superior quality for every delivery.

Creating together

Partnership, cooperation and communication

You get one team of dedicated contacts who know you, your business and your market. We keep focus on your project, your costs and your production possibilities. We will challenge you in the development process and cost optimize throughout the production process. Our goal is very clear - **to work for you and with you.**
