

eMobility Ecosystem

eMobility Charging Ecosystem

Energizing your journey into a new era

Message and story

Digital technologies are the precursors for the necessary infrastructure installations required to meet the growing demand for electromobility. In Hall 27 you can discover our complete solutions for the charging infrastructure and inform yourself in detail about components, charging management systems, as well as complete end-to-end solutions and consulting services. Our portfolio ensures that the power runs smoothly and efficiently from the generating plant to the charging station.

Benefit

Our safe, high-quality, and intelligent solutions for the electromobility infrastructure offer a platform for the challenges our customers are facing. With an advanced and sustainable integration of electromobility in the power supply system, we pave the way into a powerful and digital future. From consulting through planning to implementation and service, Siemens offers products, systems, and complete solutions out of one hand.

Exhibits

- SiCharge CC AC 22
- Versicharge wallbox
- SIMATIC charging controller
- eMobility Operation Center
- Stress test for the distribution grid
- ubitricity
- Smatrics
- EcoG
