STRÖMUNGS**RAUM**

DIGITALIZE. ANALYZE. OPTIMIZE.

STRÖMUNGSRAUM SIMULATION AS A SERVICE.

StrömungsRaum is an individual web solution for the simulation of flow processes and machines. It brings no requirements for the customer's hard- or software.

With StrömungsRaum, IANUS provides the customer a very simple access to flow simulations and the required hardware. Furthermore, StrömungsRaum is a cloud-based web application and an individual, dynamic system that is constantly being improved by IANUS. Infrastructure-as-a-service is combined with software-as-a-service.

HOW DOES STRÖMUNGS- RAUM WORK?

StrömungsRaum is easy to use. It can be used via any conventional PC or laptop directly in the browser. This allows the customer to start flow simulations within seconds.

The simple operability enables our customer to simulate complex flow processes without any expert knowledge. This is possible due to an individual adjustment of StrömungsRaum to each customer's requirements.

Thereby, every employee in the company is able to use this system.

HOW DO CUSTOMERS BENEFIT FROM STRÖMUNGSRAUM?

StrömungsRaum is individually tailored to each company.

When a company buys StrömungsRaum, it gets the development of an individual solution - no pure software - that is perfectly integrated into the company's workflows.

StrömungsRaum is operated by IANUS and is continually being developed further. Additionally, the customer gets a contingent of simulations, which can be used at any time with the customer's individual StrömungsRaum.

Thus, IANUS and StrömungsRaum offer the customers a tailor-made solution and an ideal partner package for the individual simulation of flow problems.

StrömungsRaum is the digital 3D technical center for the digitization, analysis and optimization of flow processes.
