

# Neuron soundware – The European leader in acoustic technologies for predictive maintenance

Neuron soundware develops a smart system that detects machine problems. By recording audio data via sensors and the subsequent automatic evaluation by algorithms, failures or abnormal behaviors of machines are detected and production breakdowns are prevented.

Neuron soundware was named “Idea of the Year 2016” in the Czech Republic for the combination of artificial intelligence and Internet of things technologies. Founded in 2016 by Pavel Konečný in Prague, the company received EUR 600,000 investment by J&T Ventures in 2017. One year later, Neuron soundware was classified as a “Cool Vendor in Acoustic Technologies for Predictive Maintenance” by Gartner.

We are proud to work with clients such as Airbus, Siemens, BMW, Skoda, MVV Energie, Bosch, LG or Mercedes-Benz.
