ACCURACY, TECHNOLOGY AND PRECISION

BRESTAHL, a company specialized in high tech metalworking, is capable of proposing complete solutions by offering services in:

- » **High tech welding** (special materials/special processes);
- » **Anticorrosive systems / painting;**
- » **Engineering services** (product, processes, industrialization);
- » **Support in conception and development.**

Besides the necessary guarantees as far as product and processes are concerned, we propose a different approach through proactive communication dynamics between **BRESTAHL** and their business partners in such a way that the final result exceeds expectations.
More than working for you, we want to work with you...

Reaction to adversities and in time delivery are faced as criteria for positive differentiation and boost of customer loyalty. We believe in synergy and cooperation between companies as a way of leveraging to achieve joint success.

We propose to integrate your projects with professionalism, total transparency and confidentiality, while fighting for the success of your aims.

Culture of quality is part of our DNA and it's therefore visibly cross-cutting every task we carry out.

*"We don't fight quality,
only the way to reach it.."*

BRESTAHL counts on industrial facilities with more than 2.400 m² of appropriate production area to develop its activity.

The equipment used by **BRESTAHL** is technologically advanced and the company relies on its worldwide highly recognized partners.

EXCELLENCY
MOTIVATION and AVAILABILITY
CREATIVITY and INNOVATION

We allocate our know-how to you, by cooperating not only in the development of constructive solutions, but also in the definition of technical specifications, in such a way that we gather appropriate characteristics to fulfill particular demands of the application at stake.

Conception, planning and simulation of products/processes are done on advanced software CAD (2D/3D/FEA), managing industrialization and programming of products/processes the best way possible.

Aware of the importance to assure product quality, dependent on special manufacturing processes, **BRESTAHL** assures control of processes to each stage of inspection and trial, making sure it comes out according to the product requirements.

The specialized know-how, coupled with best practice and applicable standards gives the product specific demands even before market sectors where levels of demanding and acceptance criteria are high (oil & gas, transport, energy, aircraft and car industry).

INTEGRITY
SOCIAL RESPONSIBILITY
PRAGMATISM

Product quality/services and the knowledge of good practice make us competitive in terms of costs, in an ever more competitive and globalized market.
