

**IRI** is the definitive solution that **saves maintenance costs** by foreseeing errors that produce stops in your production. In addition, IRI provides all the information about the **power consumption** of your plant.

**Your solution to increase the production and to optimize the energy consumption for all brands of industrial robots.**

## WHY YOU NEED IT

Can you predict when your production is going to stop?

Do you know the energy your robots consume?

Do you know what providers do with your data?

## FEATURES

All manufacturers and all metrics of energy and predictive maintenance on a single platform.

The data is yours and only yours, both on premise and on cloud infrastructure.

Complete solution, which supports most data sources, both IT and OT.

IRI shows only the metrics that add value to your business, and with 3D visualization.

## WHAT DOES IT GET?

**Energy saving** IRI forecasts and detects consumption, identifying the causes to fix anomalies in energy.

**Production increase** Health state and predictive maintenance of the robots, allowing to fix errors before stopping the production.

**Don't let an unexpected stop ruin your business, take control.**
