

The **Most Advanced**
Time Series Platform

01

Introduction

Time Series are becoming ubiquitous

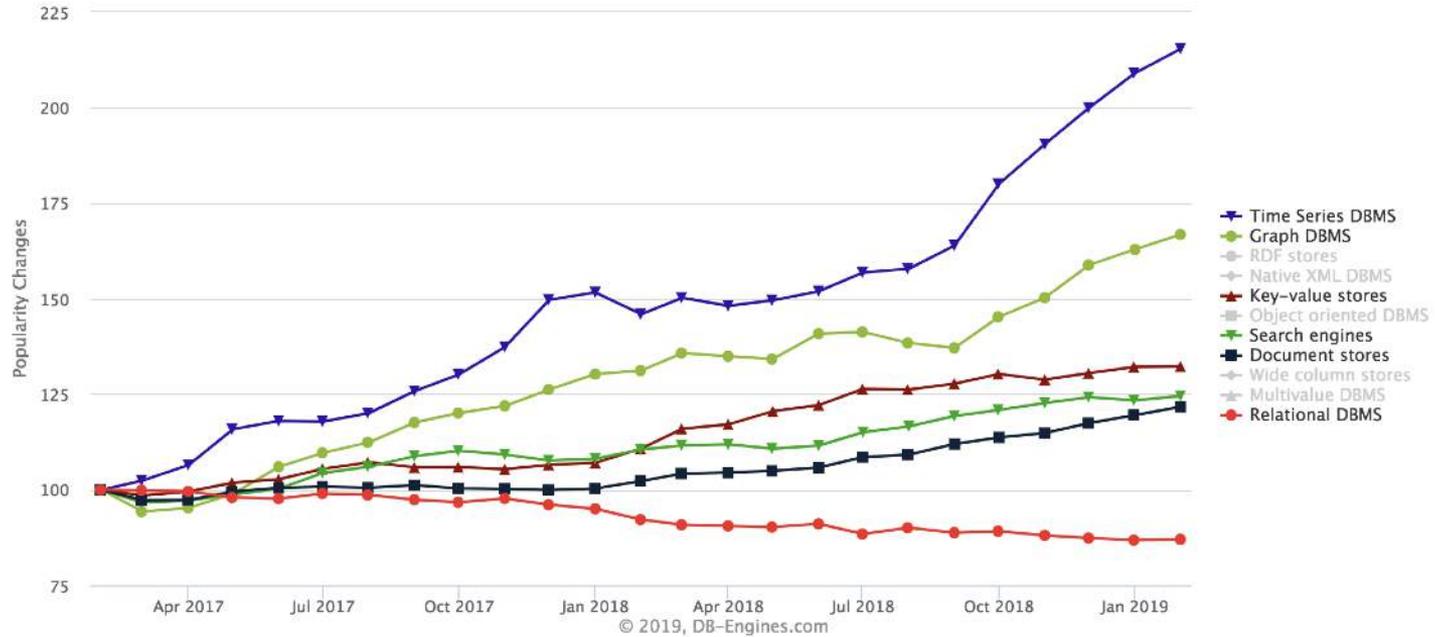

Time Series

From IT monitoring to sensors in IoT devices, Time Series are gaining traction

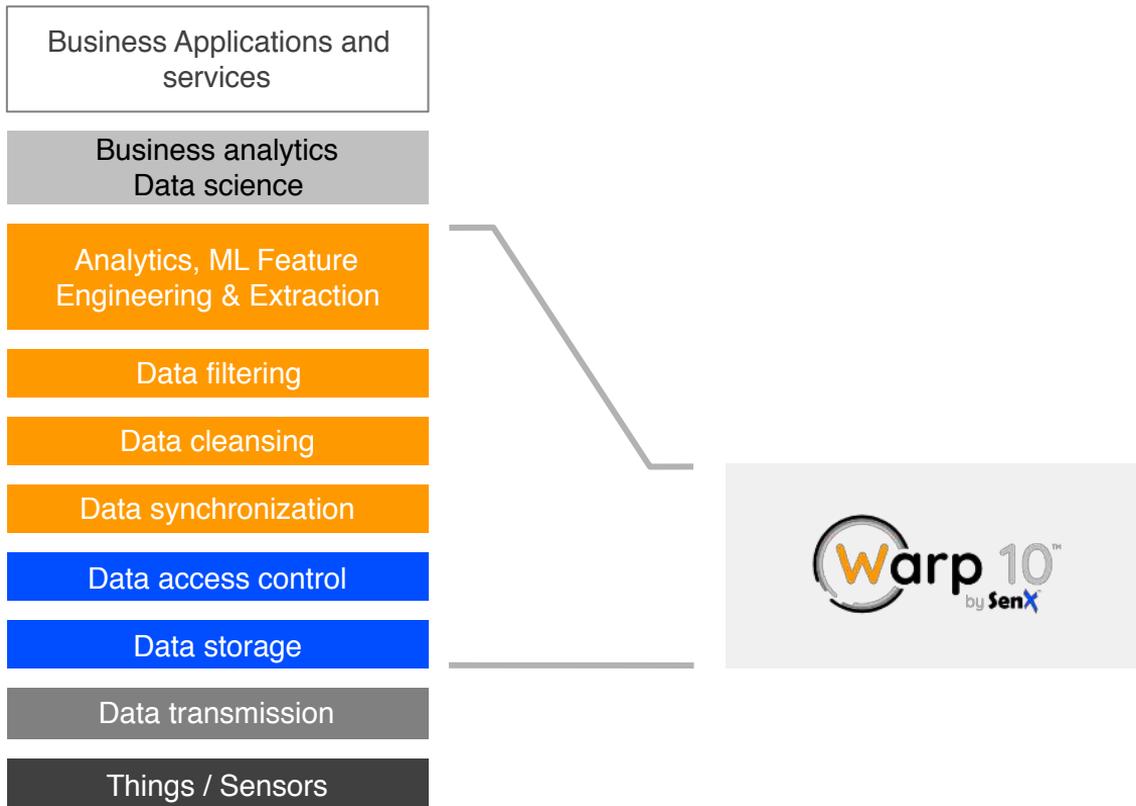

DataBase category with the most growth: TSDB*

*Time Series
DataBase

Warp 10™ simplifies data management & analytics

80%
of effort

Fast, Scalable and Secure Storage Engine

- Native support for Geo Time Series™ data model
- Disk or in-memory storage
- Flexible token mechanism for authentication and authorization
- Configurable encryption levels

Use of the Warp 10™ Storage Engine is optional
Analytics Environment can access third party data stores

Advanced Analytics Environment

A library of **900+** functions

From summary statistics to advanced signal processing and pattern detection

Efficient framework for application developers

Speeds up development process, allowing a sharper focus on core business issues

Greatly improves performances and enables scaling of analytics

Flexible Deployment Options

EDGE

STANDALONE

DISTRIBUTED

Build coherent data pipelines with identical features available at each level

Warp 10™ addresses key challenges

Performances

Ingestion from 100ks of measures/s (standalone) to tens of millions (distributed). Around 15k/s on edge.

Scalability

From low data rates to more than 100 million measures/s with live historical datasets of several 100s trillion datapoints

Interoperability

Easy to interface with any environment and data format, including support for vertical standard ontologies

Usability

Retention policies, background processing, deletions, data governance, compliance

Security

Secure by design, dynamic allocation of encrypted tokens, metadata encryption, optional datapoints encryption

Industrialization

Warp 10™ goes from interactive data analytics to an integration into operational processes

Machine Learning / Artificial Intelligence

Business

Data Science

Machine Learning Model

The solution that makes the major part of the job

Data collection
Data cleansing
Data synchronization
Feature extraction
Analytics tools

Open Source Distribution

A screenshot of the Warp 10 website homepage. The background is dark blue with a large, stylized "Warp 10" logo in the center. The logo consists of the word "Warp" in orange and "10" in white, with a white circular graphic element around the "W". Below the logo, it says "by SenX". The top navigation bar includes links for "About", "Download", "Getting started", "Documentation", "Community", and "Contact sales". A search bar is located in the top right corner. The main content area features the heading "A complete time series platform" followed by a paragraph describing the platform's capabilities. Below this, there is a section titled "The Most Advanced Time Series Platform" and "Fully Open Source" with a green "Getting started" button.

The logo for Warp 10 is centered on a blue background with a white grid. The word "warp" is written in a lowercase, hand-drawn, sketchy font. The letter "w" is solid white, while "a", "r", and "p" are filled with a white cross-hatch pattern. The "10" is written in a simple, outlined, sans-serif font. A trademark symbol (TM) is located to the upper right of the "0". The entire logo is overlaid on a white grid consisting of solid horizontal and vertical lines, and a vertical dashed line that passes through the center of the "w".

warp 10TM

Technical Description

simplify

Working with **spatio temporal sequence** data

A complete solution for improved efficiency

Universal Data Model

Time Series

Location data

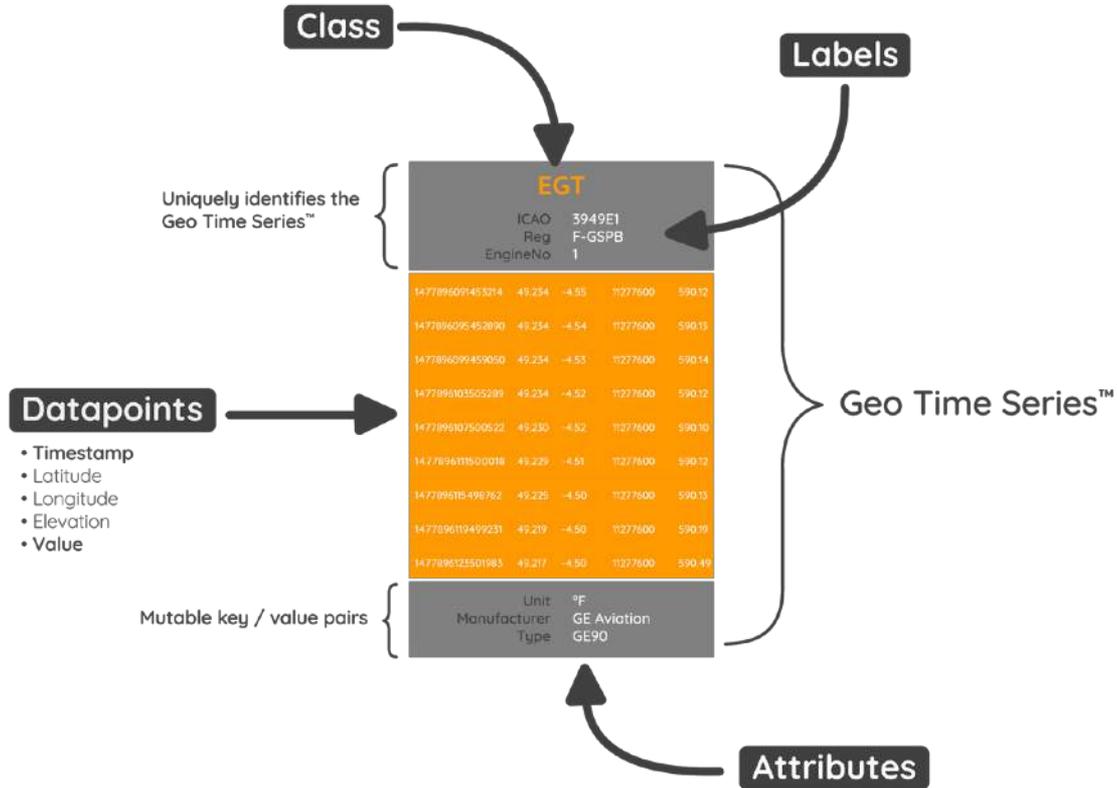

+

Geo Time Series™

By merging time and space, Warp 10™ enables efficient spatio-temporal analytics

Geo Time Series™ data containers

Able to represent any sequence data

Events (sporadic) - Logs, alarms, alerts

Time Series (regular, irregular) - Sensor readings, metrics

LONG, DOUBLE, BOOLEAN and STRING values support

Full UTF-8 support

Flexible metadata can adapt to any domain/ontology

Warp 10™ Storage Engine (Continuum)

Geo Time Series™ data model support

Built for performance and scalability

Secure by design, strong authentication/authorization

Use of standard protocols and formats for ease of use
