

FreePointTM
Technologies Inc.

*The experts in extracting
relevant machine data for action*

FreePoint Technologies has developed an out-of-the-box cloud based system to connect all machines to big data solutions.

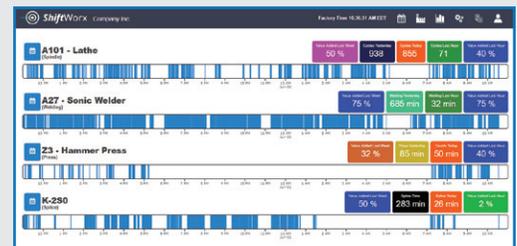

Keep reading to learn more about the FreePoint system and how our solution can save your company over six figures in the first year.

getfreepoint.com

FreePoint is focused on solving three problems for manufacturers:

Downtime Tracking

FreePoint's downtime tracking software provides real time data and reports that can assist your company to reduce downtime, improve processes and OEE. We give management and operators an immediate visual understanding of machine performance with the added capability to narrate unexpected downtime. We support manufacturers to extract the relevant machine data to improve processes within your plant.

25K Saved in 2 Weeks

FreePoint saved our client 25k in new equipment purchases by tracking the non-value added time. By doing so, within 2 weeks, management was able to track the reasons for the non-value-added work and optimize processes within the plant to avoid the unnecessary purchase.

Connecting Legacy Machines

If your company is manually tracking downtime in spreadsheets on a clipboard, the data is not real time accessible or easily reported on. Our patent pending system allows for manufacturers to finally be able to extract and visualize important data from ALL machines on the plant floor instantly.

Employees are the Missing Piece

With the immediate visualization of value-added and non-value added time, employees are instantly more empowered to change the way they work. When employees are provided with software that encourages their participation, input and feedback, they become more motivated to increase productivity. By integrating a downtime tracking software, you are encouraging bottom-up communication; employees are adding the missing piece: the human voice to the digital data.

Net Cost Benefit of 141K per Machine per Year

A client in Southwestern Ontario achieved an increase of 9.4 hours of additional utilization per week, per Mill machine which resulted in a net cost benefit of \$141,000 per year. (achieved on a Mill running 24 hours a day, 5 days a week)

How Much is 6 Minutes Worth?

Manufacturers worldwide are in pursuit of cost savings opportunities. By using a patent pending Industry 4.0 technology, FreePoint helps manufacturers to collect relevant machine data to drive action on the plant floor.

We have created an ROI estimator to calculate the operational savings realized by implementing our machine monitoring systems to track and narrate non-value added machine time.

By recouping just 6 minutes per hour of lost time, we can give you back on average 30k per machine per year!
