

EXTRUDED FRICTION MATERIALS

Trimat manufacture a complete range of extruded rubber based friction products, materials can be supplied in either flexible or rigid forms.

Semi-cured qualities are available ready for heat bonding to a desired radius or shape and products with rivet holding capacity are also available.

The Trimat range is non-asbestos and includes both non-metallic and metallic formulations offering a variety of friction levels and performance characteristics. Reliability and consistency are guaranteed thanks to over 20 years of manufacturing experience and the principal of using only the highest quality raw materials.

Rolls are supplied up to 12.7mm thick and 200mm wide, alternatively flat sheets are manufactured up to 330mm wide.

Products can also be supplied as rings, segments, radiused linings and cone linings. to suit customer drawings.
