

Matrix Gemini BIMS

Manage all quality processes in a centralised database

A Matrix Gemini Business Information Management Solution (BIMS) allows you to manage assets, control documentation, track issues, drive quality cycles and much more.

Matrix Gemini BIMS - Quality Management made easy

Information is key to all organisations; regulatory compliance around different information sets within a company emphasises the need for systematic storage, traceability and integrity of data. Our Quality Management package can be offered as individual modules or as a suite of solutions. Organisations can now face internal and external audits with confidence.

Configurable to suit your specific company preferences and needs both now and in the future. This approach offers unique future proofing. Our Quality Management Suite facilitates compliance with ISO 9001 and ISO/TS 16949 for regulated companies to reduce risk, liability and costs. A system that will change to the needs of your business.

Compliance Management Suite Modules

Asset Management

Track assets including description, location, service schedules and other details. Keep a complete history of location changes and/or chain of custody and instantly locate assets when required.

Feedback Management

Manage feedback with a clear view of outstanding actions and fully detailed responses. The system provides easy access to active issues by drilling down to action, details and investigation results. Filters enable location of specific records with ease.

Controlled Documents

Manage the circulation of corporate documentation, automate the confirmation of staff attention and trace the history of revised documents for internal and external auditing and reporting.

Audit Planning

Critical to uncovering problems or discrepancies in business operations audit planning defines a procedure for quality improvement within departments and the organization.

CA/PA Management

Drive continual quality improvement across an organization. Record quality and auditing issues, allocate them to individual staff, and drive actions to uncover and resolve root causes. A complete history of actions are kept for audit purposes.

Competency Tracking

Match the competencies of staff to the specific needs of their role. Schedule training, keep training certificates, and much more, all within one system. May be linked to other systems, including a LIMS, ensuring only properly trained staff are authorised to perform certain tasks.
