

BIMOS – NEON LABORATORY CHAIR

Neon Laboratory chair

Laboratory work imposes unique seating requirements, which are unlike those of any other working environment. They have to allow for flexibility in terms of the work and must not take up too much space. Nevertheless, expectations remain high in respect of ergonomics and comfort, as laboratory tasks call for fine motor skills, and high levels of precision and concentration. The flexible configuration options take the strain out of demanding tasks that involve leaning forwards such as microscope or pipette work. The materials used are washable, can be disinfected and some even feature an antibacterial coating. During production, the utmost care is taken to ensure that there are no seams or gaps that could encourage germs or bacteria to grow. So Bimos laboratory chairs are the solution of choice, whenever seating is needed in the laboratory.

Neon, the new generation workplace chair, cuts a fine figure in the laboratory too. Neon supports the forward-leaning sitting position that is often necessary in work in the laboratory. Neon is very elegant; its modern design matches the high-tech laboratory environment perfectly. Of course the laboratory version of Neon has all the characteristics you would expect of a good laboratory chair.

Bimos – a brand of Interstuhl Büromöbel GmbH & Co. KG

Bimos is the leading manufacturer of top-quality industrial and laboratory chairs in Europe. For over 50 years, the specialist knowledge, technical expertise and passion that go into Bimos chairs have ensured that staff are productive, healthy and comfortable in any workplace.
