

HEBOR Right Angle Clampings

The HEBOR Right Angle Clampings are the perfect device for the assembly of various elements at right angles. Cupboards, shelves, cabinets, partitions and drawers are just a few examples.

The set consists of 5 clampings. They slide freely along all vertical or horizontal sides of the elements to be assembled and can be fixed in any position by means of eccentric discs and lever. The assembly can be done very easily by one man without any other accessories and in a very short time, thus labour costs and time are considerably saved.

When the elements are assembled with the HEBOR Right Angle Clampings, it is recommended to use the HEBOR special screws to join the elements together.

The special screws have a very high tear strength and provide an exceptional right angle stability. They also have the advantage that the assembly items can easily be dismantled for the purpose of transport, storage, etc. and assembled again with the HEBOR Right Angle Clampings. Special plastic covers of brown or white colour can be supplied for the special screws type that make the screw heads invisible.
