

Timber Grader MTG

Mechanical strength graders for measuring timber strength have been available in various types and sizes for many years now. They have one thing in common: they are stationary. Brookhuis Micro-Electronics has now developed the Timber Grader MTG: a unique system for measuring timber strength and stiffness using a hand-held device, which makes it flexible. It can be used any time, but more importantly, anywhere and everywhere. The convenient cordless Timber Grader MTG is very user-friendly and can be used virtually anywhere and for anything. Whether it is for strength grading timber to be purchased or processed, sorting of wood in strength classes, or for research and education. The performance of the Timber Grader MTG is comparable to that of mechanical graders and gives better grading results than visual strength grading. As a result, more timber ends up in a higher grading class. The Timber Grader MTG can measure both hardwood and softwood. The Timber Grader MTG can be used anywhere in the world by upgrading it with additional strength class licences. The handheld Timber Grader MTG is your personal mechanical strength grader! For further information and a customised quote, please contact Brookhuis Micro-Electronics or one of our distributors and dealers.

Microprocessor-controlled sensor with:

- Stiffness (MoE) & Natural
- Frequency
- Strength Grading according to international standards
- Softwood & Hardwood
- Patented
