

## *EXPLOSION PRESSURE RELIEF VALVES*

www.hammerer.at

Our explosion pressure relief valves **(patented protection system)** are available to meet individual requirements and can be integrated and installed at low cost in existing technical systems as well as in new systems such as jet pressure air filters, dryers, cyclones, pipelines, drag bar feeders or silos. With our valves and retrofit kits you can bring your system up to the present state of the art at reasonable cost, without complications, so that it meets the legal requirements.

#### Advantages

- resealable (no expensive change of bursting disc required)
- smaller number of parts required compared to the bursting disc due to reduced response pressure (adjustable)
- can be mounted vertically and horizontally
- no stocking of bursting discs necessary

Optionally the valve can be supplied with limit position monitoring.

Each valve is produced in our works and set and tested before delivery on our test bench according to your requirements.

Our valves have been tested:

**EC Design Testing**  
**IBExU10ATEX2165 X**
