

## Ceetec P40 – little and handy

The Ceetec P40 machine is the smallest machine in the painting range and particularly suitable for small handcraft companies, for example painters, carpenters, joiners and timber yards.

The simple construction of the machine makes it very easy to use. The machine is on rubber wheels and is therefore easy to move about. It is therefore also ideal for building sites.

The wooden item is fed edgewise through the machine with the help of the feeder. The rotating brushes are conical, which means that even tiled surfaces get a perfect finish.

The machine is delivered complete with brushes and filter bags, and is ready to use as soon as it is connected to the power source.

The Ceetec P40 is a standard machine and can therefore be delivered from day to day.

Extra equipment can also be added, including roller conveyors for input and output, filter bags in varying grades and horsehair brushes.
