

LONGLIFE saw blade **PI-521VS Plus** equipped with tips from super-extra hard carbide is designed for cutting in stack HDF, MDF, laminated board, chipboard and other homogenous materials.

The construction of the saw blade includes extra long-life type of carbide produced in nanotechnology with addition of chromium and nickel, which together with new improved geometry of blade has substantially increased life of the saw blade.

Additionally, optimal tensioning as well as new type of silencing cuts noticeably increase stiffness and stability of the saw blade which has a direct effect on life of the tool.

Type of cut:

- boards in stack.

Intended use:

- HDF,
- MDF,
- Laminated board,
- Chipboard.

Toothing:

- triple-chip (trapezoid) grind (GA/GA).

A NEW ERA IN CUTTING BOARD IN STACK

PI-521VS Plus
