Automatic diameter recovery system.
Allows you to avoid in a definitive way the reduction of the diameter, with simplicity and without the use of measuring instruments to verify the correct functionality of the knife after sharpening.

New geometrical form of the wedge.
The idea is fundamentally based on the geometrical form of the wedge which blocks the knives and rises until it compensates the reduction of diameter.

Change of geometrical form of the screw.
Proper locking is obtained when the flat surface of the spherical insert completely adheres to the wedge.

CUT LIFE COMPARISON

Profiled knife - up to 8x resharpenable
This system allows to obtain a perfect fitting all through the knives' life, even after 8 sharpenings.
