

# CLEAN AIR

## IN ALL TYPES OF INDUSTRIES

D E D I C A T E D   T O   C L E A N   A I R

## Supplier of clean air for the benefit of environment, employees, products and profitability

In all types of industrial businesses, dust and dirt in the form of dust chips and granules – present major challenges. Since 1957, JKF has been the industry's supplier of innovative and highly efficient equipment which have helped solve these challenges.

Clean air improves both the internal working environment and the external environment. A healthier indoor climate for the company's employees results in a sustainable and environment friendly production which are of benefit to all.

Clean air can improve the production process itself and therefore the end products. Also cleaned air often means energy saving, because the air can be recycled.

The benefit of clean air is therefore a unique combination of good working environment, sustainability, improved products and a positive impact on the company's profitability.

It is as simple as this.

*JKF develops and produces a complete range of high quality components for process extraction systems.*

*The range includes:*

- Filters
- Filter bags
- Fans
- Standard duct programme galv. 2 and 3 mm
- Stainless duct programme
- Special products and accessories

**”** With JKF's product range we can offer excellent components and high technical standard...

**René Ranzenbacher,**  
holder, Holzstaubtechnik  
Ranzenbacher

## Supplier of clean air systems for decades

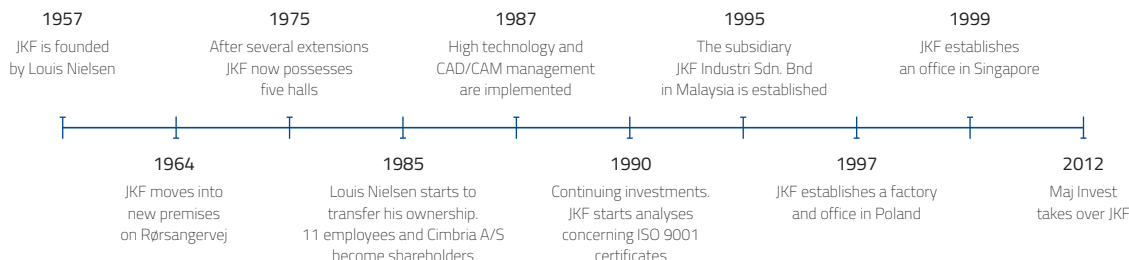

JKF was founded in 1957 by Louis Nielsen.

The company had the original tongue-twisting name of "Jysk Knæ- og Pladerørsfabrik". As export sales increased, the name was changed to the more customer friendly name of JKF Industri A/S in 1982. In 2014 the name was changed again to the easier name of JKF wherever we are in the world.

Since it's foundation, much has changed for both us and our customers in industry and in society. The company's roots are preserved but we will always strive at improvements that ensure and develop our market power and future, while at the same time guaranteeing the customers the right solutions.

We are still situated at the beautiful village Als in North Jutland, located in fresh sea air on the Kattegat coast; we still have our vision to be among the leading manufacturers and suppliers of components for process ventilation systems, and thus contribute to improving the global external environment.

*JKF's Danish factory site and head office of the group today cover over 25,000 m<sup>2</sup> of up-to-date and modern administration, development team and production facilities. JKF has manufacturing plants at its subsidiaries in Malaysia and Poland as well as the sales subsidiaries in the Philippines, Indonesia and Singapore.*

## Knowledge, development and skilled employees

JKF's production today is based on high-tech advanced modern metal processing machines which are continuously optimized for quality of the finished product.

However, the employees behind the machines represent our most important asset. The employees are essential to the quality we supply.

Some of the employees are "born" into the company, others have worked there for many years.

This provides us with a huge amount of knowledge, as the basis for our continuous development, and also a stable workforce. This applies to administration, sales, development department as well as the production.

Regardless of how long an employee has been employed by us, it is about the individual commitment, skills and the ability to find opportunities. This is very essential for our ability to adjust to the customers' requirements that change over time. Only in this way can we supply the best quality.

*JKF's fundamental values:*

- Skilled employees
- Quality in all stages
- Faultless supply and service
- Local practices

” When co-operating with JKF, it is almost like trading with old friends and not just another supplier – we appreciate the good support, advice and considerable focus on a company on the other side of the world...

**Geoff Ebdon,**  
Managing director, New Zealand Duct&Flex,  
Auckland

## Everything is connected

According to the Danish Working Environment Act, clean air in the production workplace is a clearly defined legal requirement. Had this not been the case, it would still have been prudent to invest in cleaner air. The reasons for this are numerous.

A better working environment ensures a higher job satisfaction and less absence through sickness among the employees. Dust free machines will not break down so often and therefore, will have a higher production time. The company's energy consumption will be reduced as the cleaned air can be recirculated thus saving heat.

This means that the production will be more efficient and the end products will have a better quality and finish. Finally, the pressures on the environment will be reduced to the benefit of all.

So regardless of the legal requirements, there are many good arguments in favour of cleaner air that will benefit us all – the employees, the customers, the company and the environment.

Everything is connected.

### ENVIRONMENT

*JKF's components have a positive impact on both the internal and external environment. Efficient extraction improves the job satisfaction and the working environment, as well as efficient filtration means ensuring the sustainability of the environment around us.*

### ECONOMY

*JKF's components are synonymous with higher job satisfaction, less sick absence, higher uptime of the machinery, better end products and better energy efficiency. Factors – which all have a considerable impact on the company's profitability.*

### PRODUCT QUALITY

*JKF's components ensure that granules and dust chips do not move around and affect people, products and machines inappropriately. These factors have a big impact on the quality and finish of the product which the company wants to supply.*

### ACCESSIBILITY

*JKF's components are easily accessible in most parts of the world. We have factories in Denmark, Poland and Malaysia whereas sales and advice mainly are provided through carefully chosen co-operation partners. In Poland and Malaysia, we have our own sales departments with directly end-user contact.*

## Specific industry experience

Although the basic needs for healthy and clean air basically are the same, the requirements to our components are very different from industry to industry. This is due to a whole range of factors.

At JKF we have built up a great deal of knowledge and experience about the numerous industries to whom we supply solutions. We know the industry's basic requirements and needs including the legislation which is in force.

” As JKF's representative in Great Britain throughout the last 40 years, we have witnessed both the company's growth and the development of its products into a modern and world-class company...

**Keith Weavin**, managing director,  
Truduct Products Ltd.

This experience has been built up over decades. When we combine it with our basic knowledge and the specific requirements of the customers, the correct solution is obtained.

*All our products are tested and fulfil all relevant EU legislations applicable to a specific industry.*

*JKF supplies clean air to a wide range of businesses within:*

- Woodworking industry
- Agricultural industry
- Metalworking industry
- Paper industry
- Plastic industry
- Food industry
- Textile industry
- Medical industry
- Building industry

## A product programme that will stay the course

JKF's product programme is comprehensive, flexible, modern and of course tailored to our customers' needs and requirements. We can supply components for both small and large solutions and at many different price levels.

Common to all our products is the focus on safety, environment, noise, performance, efficiency and energy consumption.

When it comes to safety, we have developed a system which sets new standards for both personal and operational safety related to explosions in filters. The method has been tested, documented and approved by TÜV.

The system has principally been accepted in environments where higher standards for cleaning and explosion prevention apply.

JKF will provide documentation for majority of processes and products through its diversity of ISO-certificates.

Furthermore, the products are designed in that way that they not only can be used in a total JKF-solution but also used and built together with other makes.

*JKF is accredited with ISO certificates as confirmation of its quality assurance procedures; ISO 9001 documents total quality, ISO 14001 the environment and ISO 18001 health and safety.*

## Accessible in most of the world

Wherever your company is located in the world, JKF's products are not far away.

With our Headquarters of the group located in Denmark, we supply a large network of associates, plant manufacturers and wholesalers across the World. Co-operation partners who, like us, are dedicated to clean air. Most of them have long-standing relations with JKF and are daily drawing on our advice, expertise and know-how.

In addition to the production facilities in Denmark, we have our own factories in Poland and Malaysia. Here we also serve and support the local markets with design, installation and service.

The fine-meshed network of co-operation partners with their local knowledge increases the value of our products to the customer. This ensures that all factors are met and taken into account so plants and components are supplied and installed in the most effective way.

” Throughout the many decades, we have co-operated with JKF, their range of equipment and components have proved to be of great benefit to our end users...

**David Marsden,**  
Managing director, Indusvent Limited

*JKF has factories in:*

- Denmark
- Poland
- Malaysia

JKF Denmark

JKF Poland

JKF Malaysia
