PAPER INDUSTRY

CARDBOARD PACKING

The JURANKO S.M. Company has developed from a family craft which has been building various tools and spare parts for the paper industry since the 80's.

After expanding it's range of activities and a series of demands for producing other kinds of cutting tools for other industries, the company was founded under it's current name in 1989 and employs workers that average 20 years of experience in the field of manufacturing cutting tools.

Because of wide variety in terms of cutting and various production procedurs we devote great care to selecting the right materials for manufacturing our industrial machine knives. In our effort to produce high quality industrial machine knives we use only high quality tool steel, high speed steel and powder steels. Also special care is given to grinding and sharpening of our industrial machine knives.

By adopting new techologies, investing in machinery and insisting on quality within agreed deadlines, JURANKO S.M. is now in a position that 70% of it's products are exported to Europe and the world countries.

Austria, Italy, Germany, Belgium, Netherlands, France, Denmark, England, Finland, Czech Republic, Slovenia, Switzerland, Belarus, Lithuania, Bosnia and Herzegovina, Serbia, Israel, Mexico.

These statictics allow us to recomend to you JURANKO S.M. as a reliable manufacturer of cutting tools.

MECHANICAL BLADES FOR THE PAPER INDUSTRY

Three groups of industrial blades can be formed when respecting the latitude of the paper industry, types of cutting and the diversity of industrial blades:

BLADES USED IN THE PAPER CONFECTIONARY

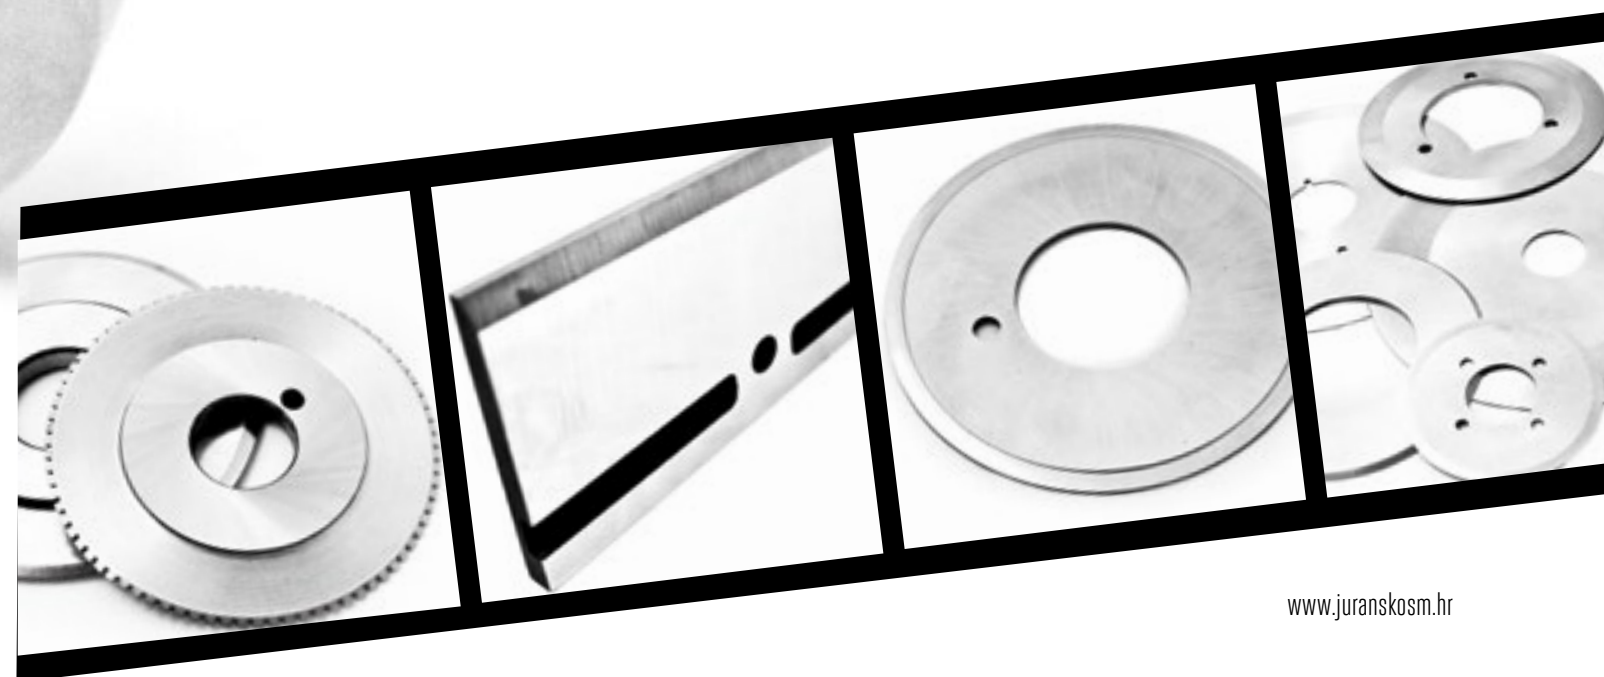

- circular blades for longitudinal cutting, upper and lower, with various cutting blade shapes depending on the material that is cut
- upper blade holders with different types of contraction on the shaft
- various types of circular and straight for perforation
- transversal cutting blades
- interspace rings used in longitudinal cutting and other cutting tools

CUTTING BLADES IN THE PRINTING INDUSTRY

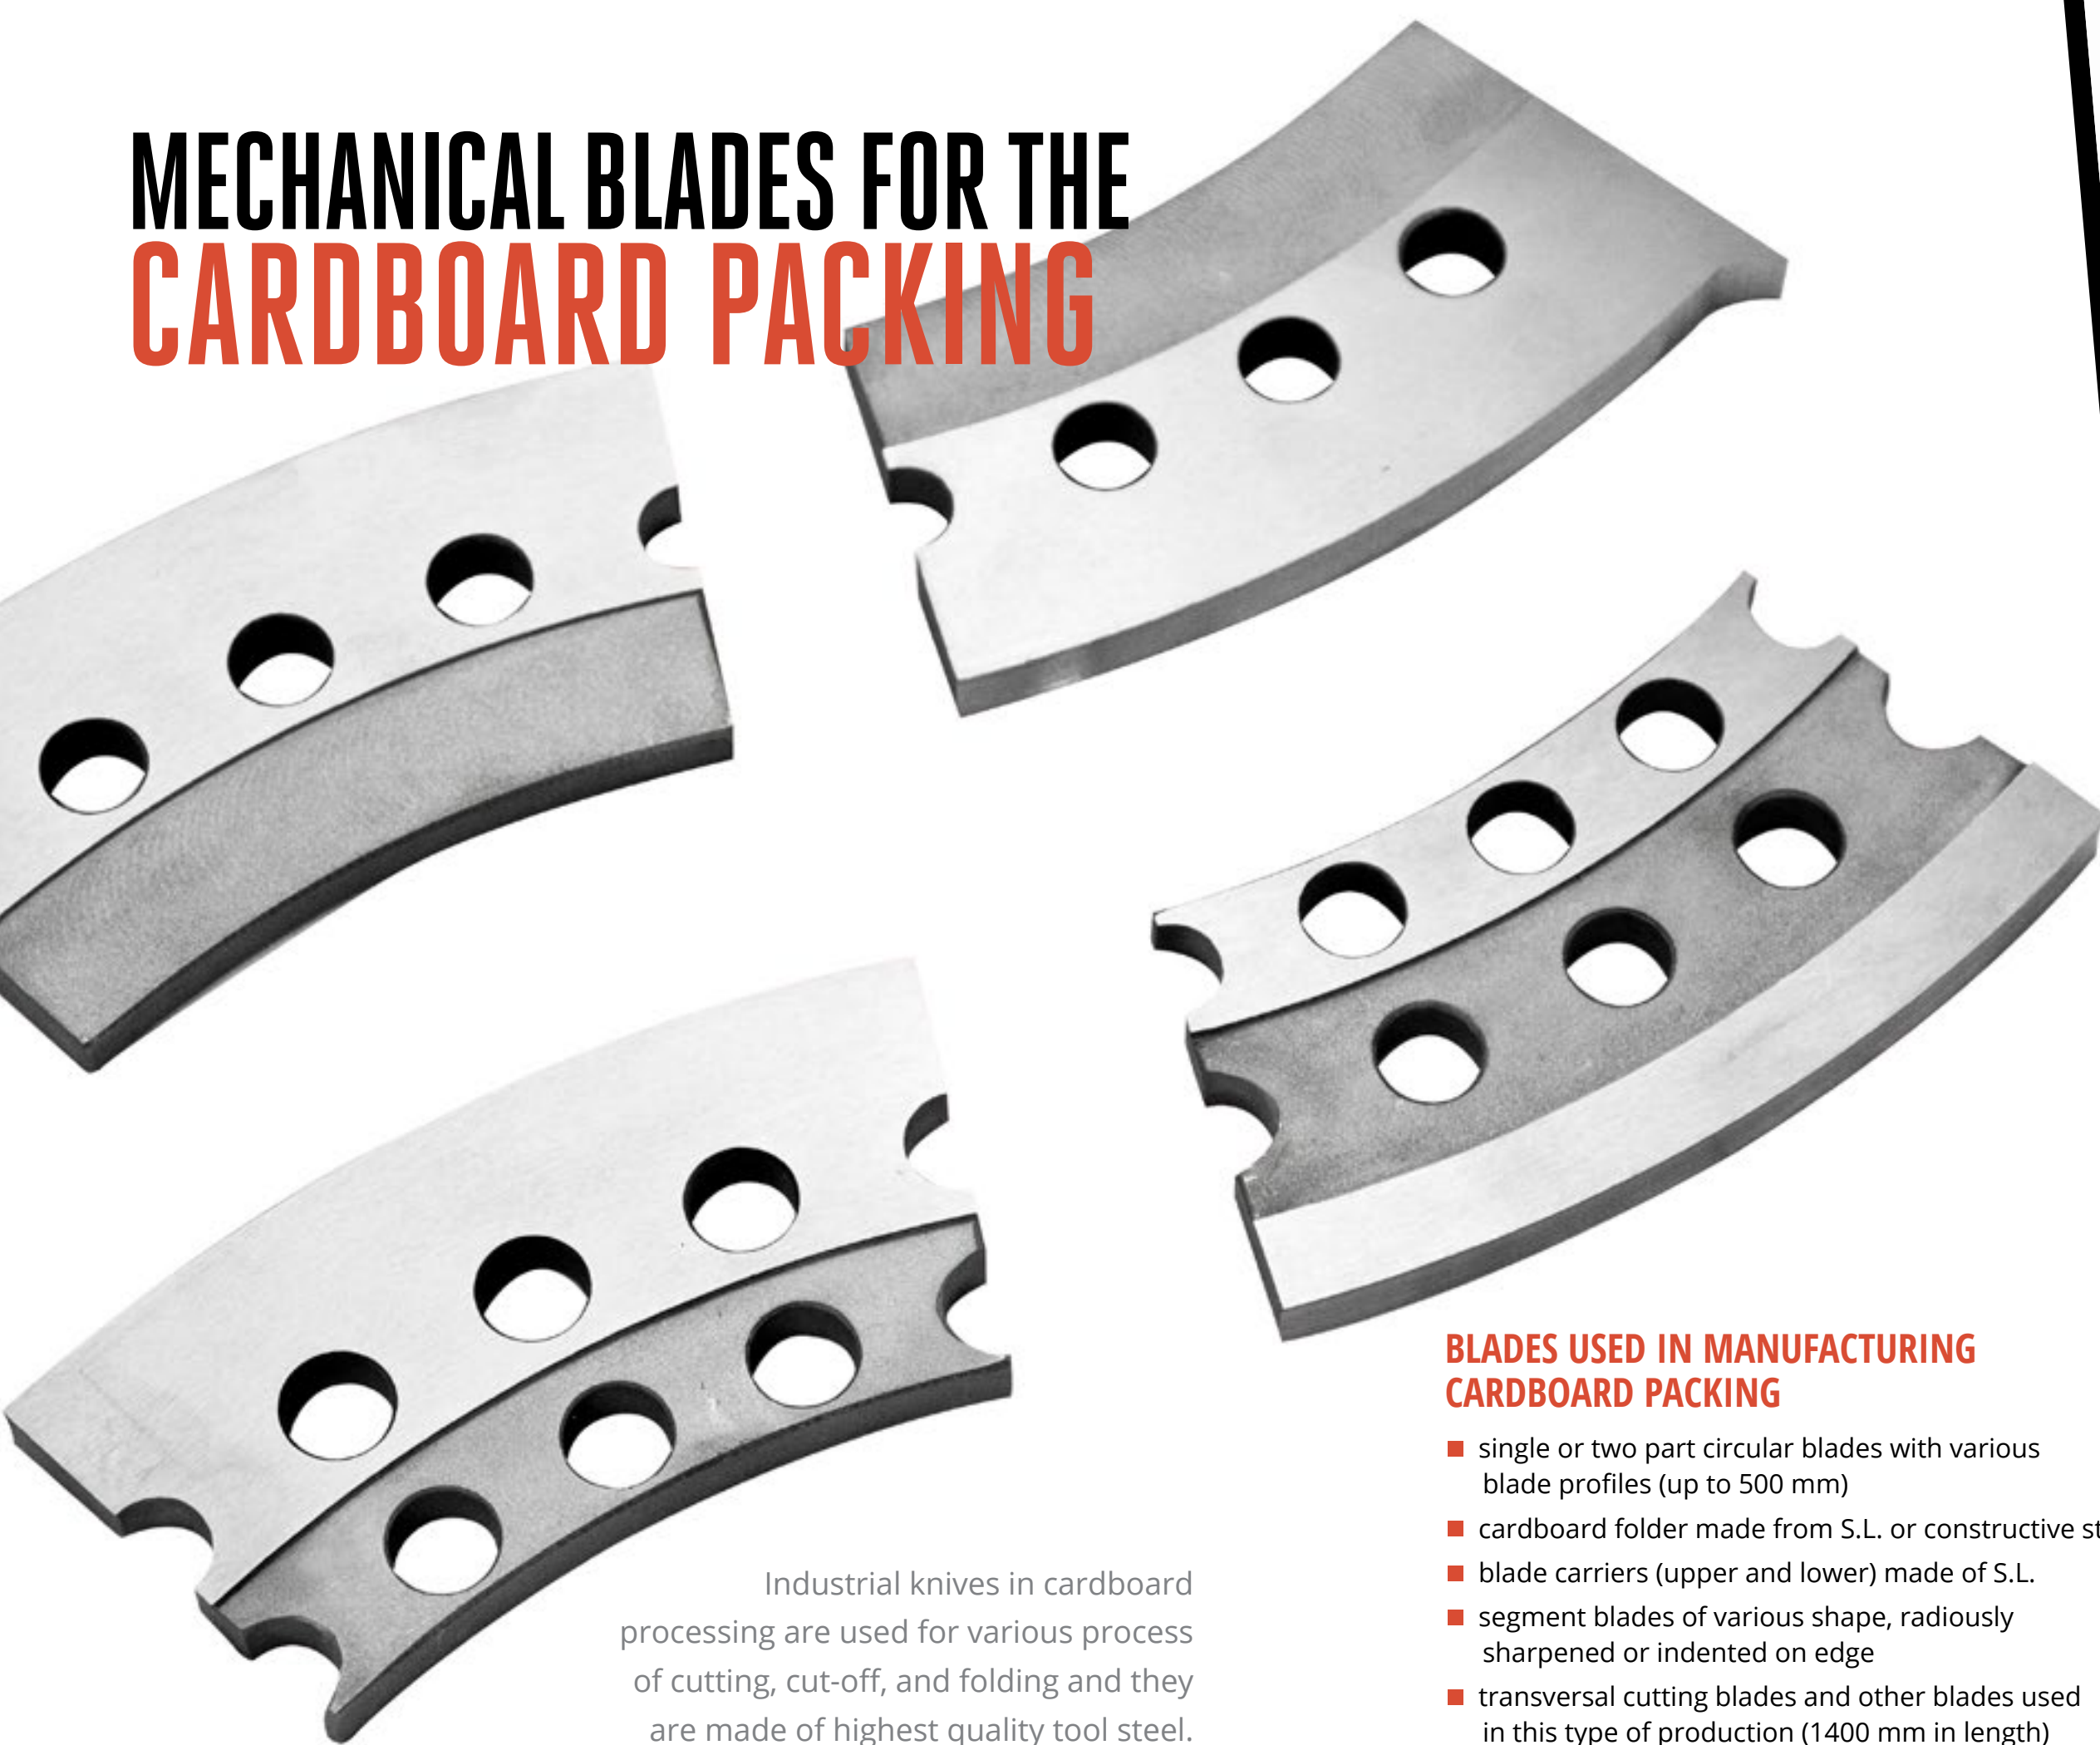

- circular perforators for continuous perforation (microperforation excluded)
- circular blades used in longitudinal and transversal cutting (with the possibility of discontinual cutting)
- straight perforators (up to 1400 mm in length)
- CRIMP-LOCK tools
- other components manufactured from sample or sketch

CONFECTIONARY

CUTTING BLADES
IN THE PRINTING
INDUSTRY

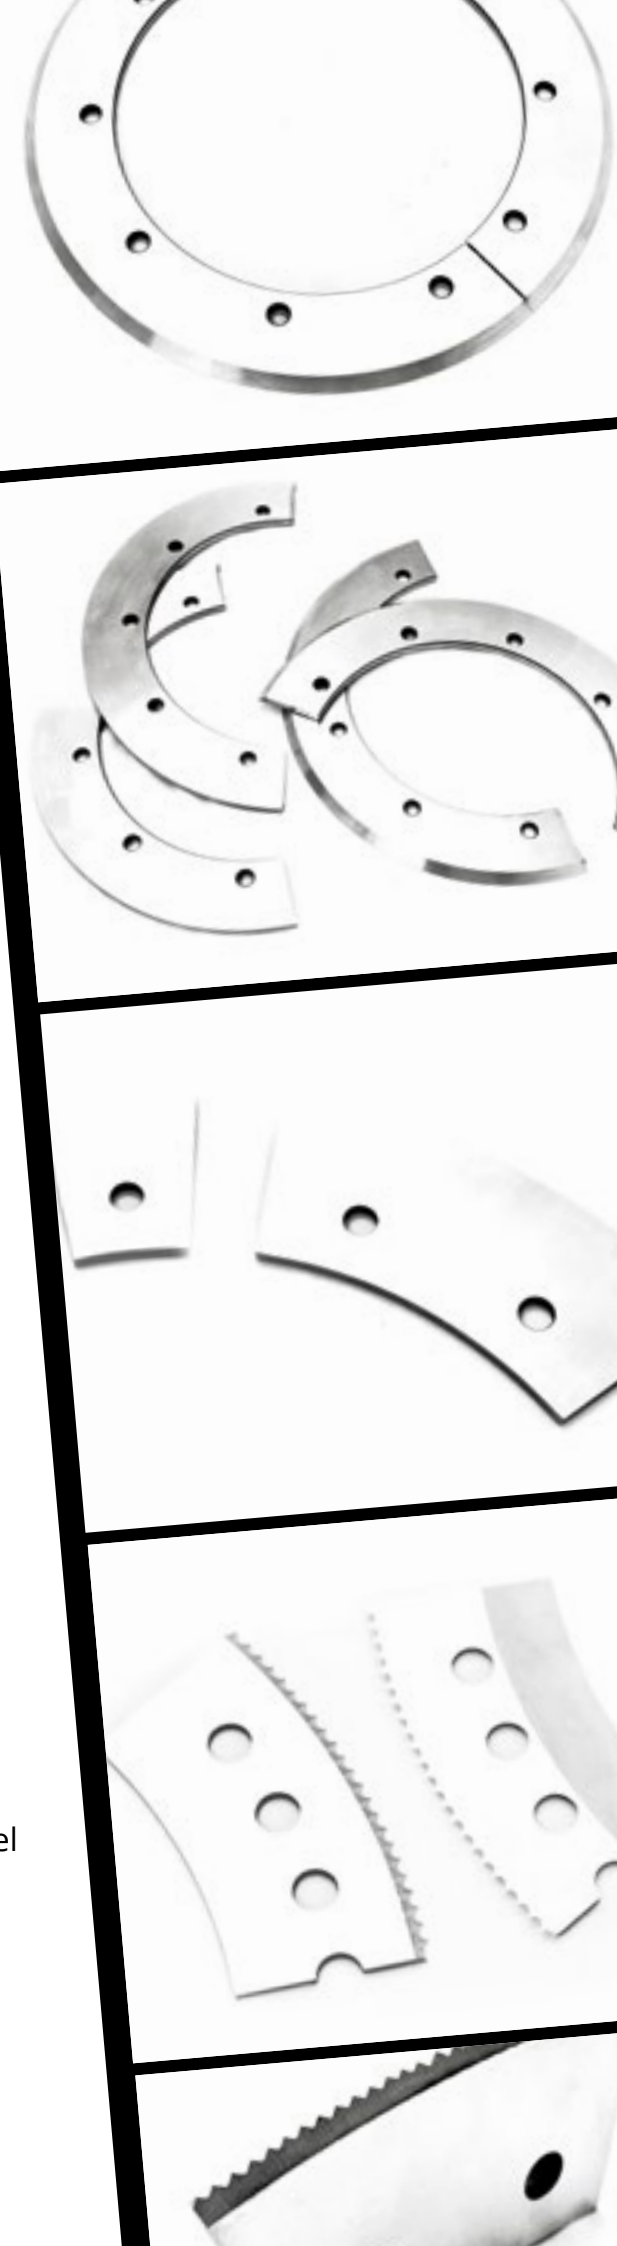

MECHANICAL BLADES FOR THE CARDBOARD PACKING

Industrial knives in cardboard processing are used for various process of cutting, cut-off, and folding and they are made of highest quality tool steel.

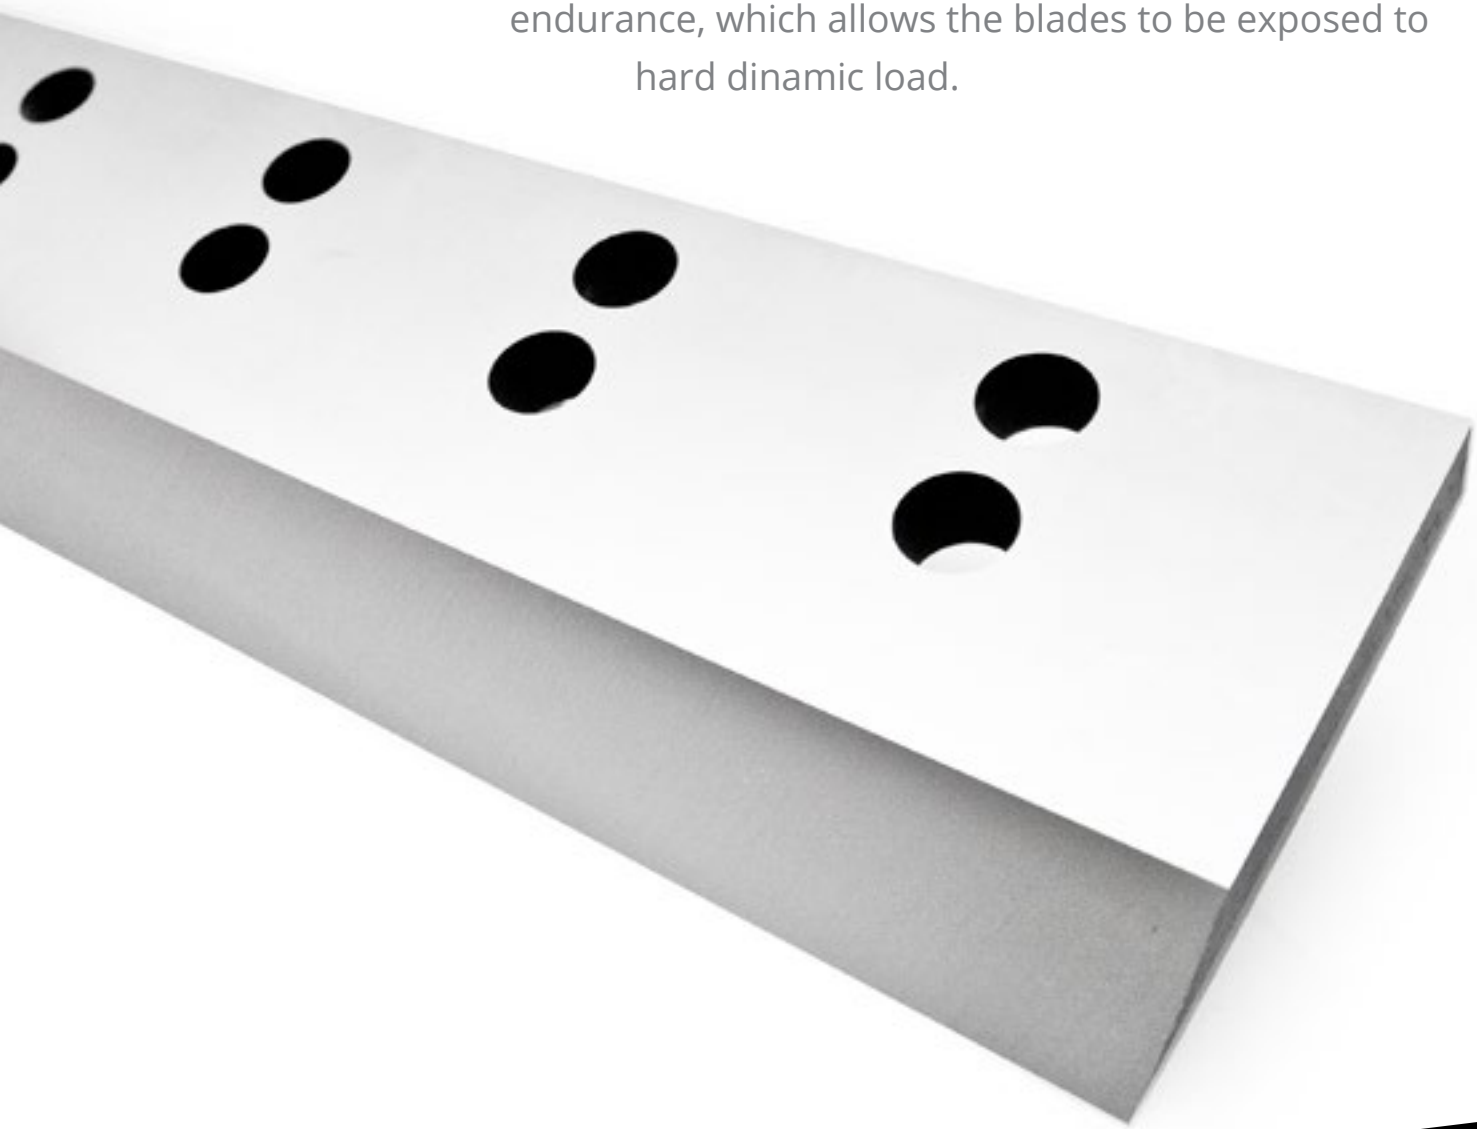

BLADES USED IN MANUFACTURING CARDBOARD PACKING

- single or two part circular blades with various blade profiles (up to 500 mm)
- cardboard folder made from S.L. or constructive steel
- blade carriers (upper and lower) made of S.L.
- segment blades of various shape, radiously sharpened or indented on edge
- transversal cutting blades and other blades used in this type of production (1400 mm in length)

MECHANICAL BLADES IN THE WOOD INDUSTRY

It is important to note that these tools are mostly made of highly alloyed steel, whose characteristics are great resistance and endurance, which allows the blades to be exposed to hard dynamic load.

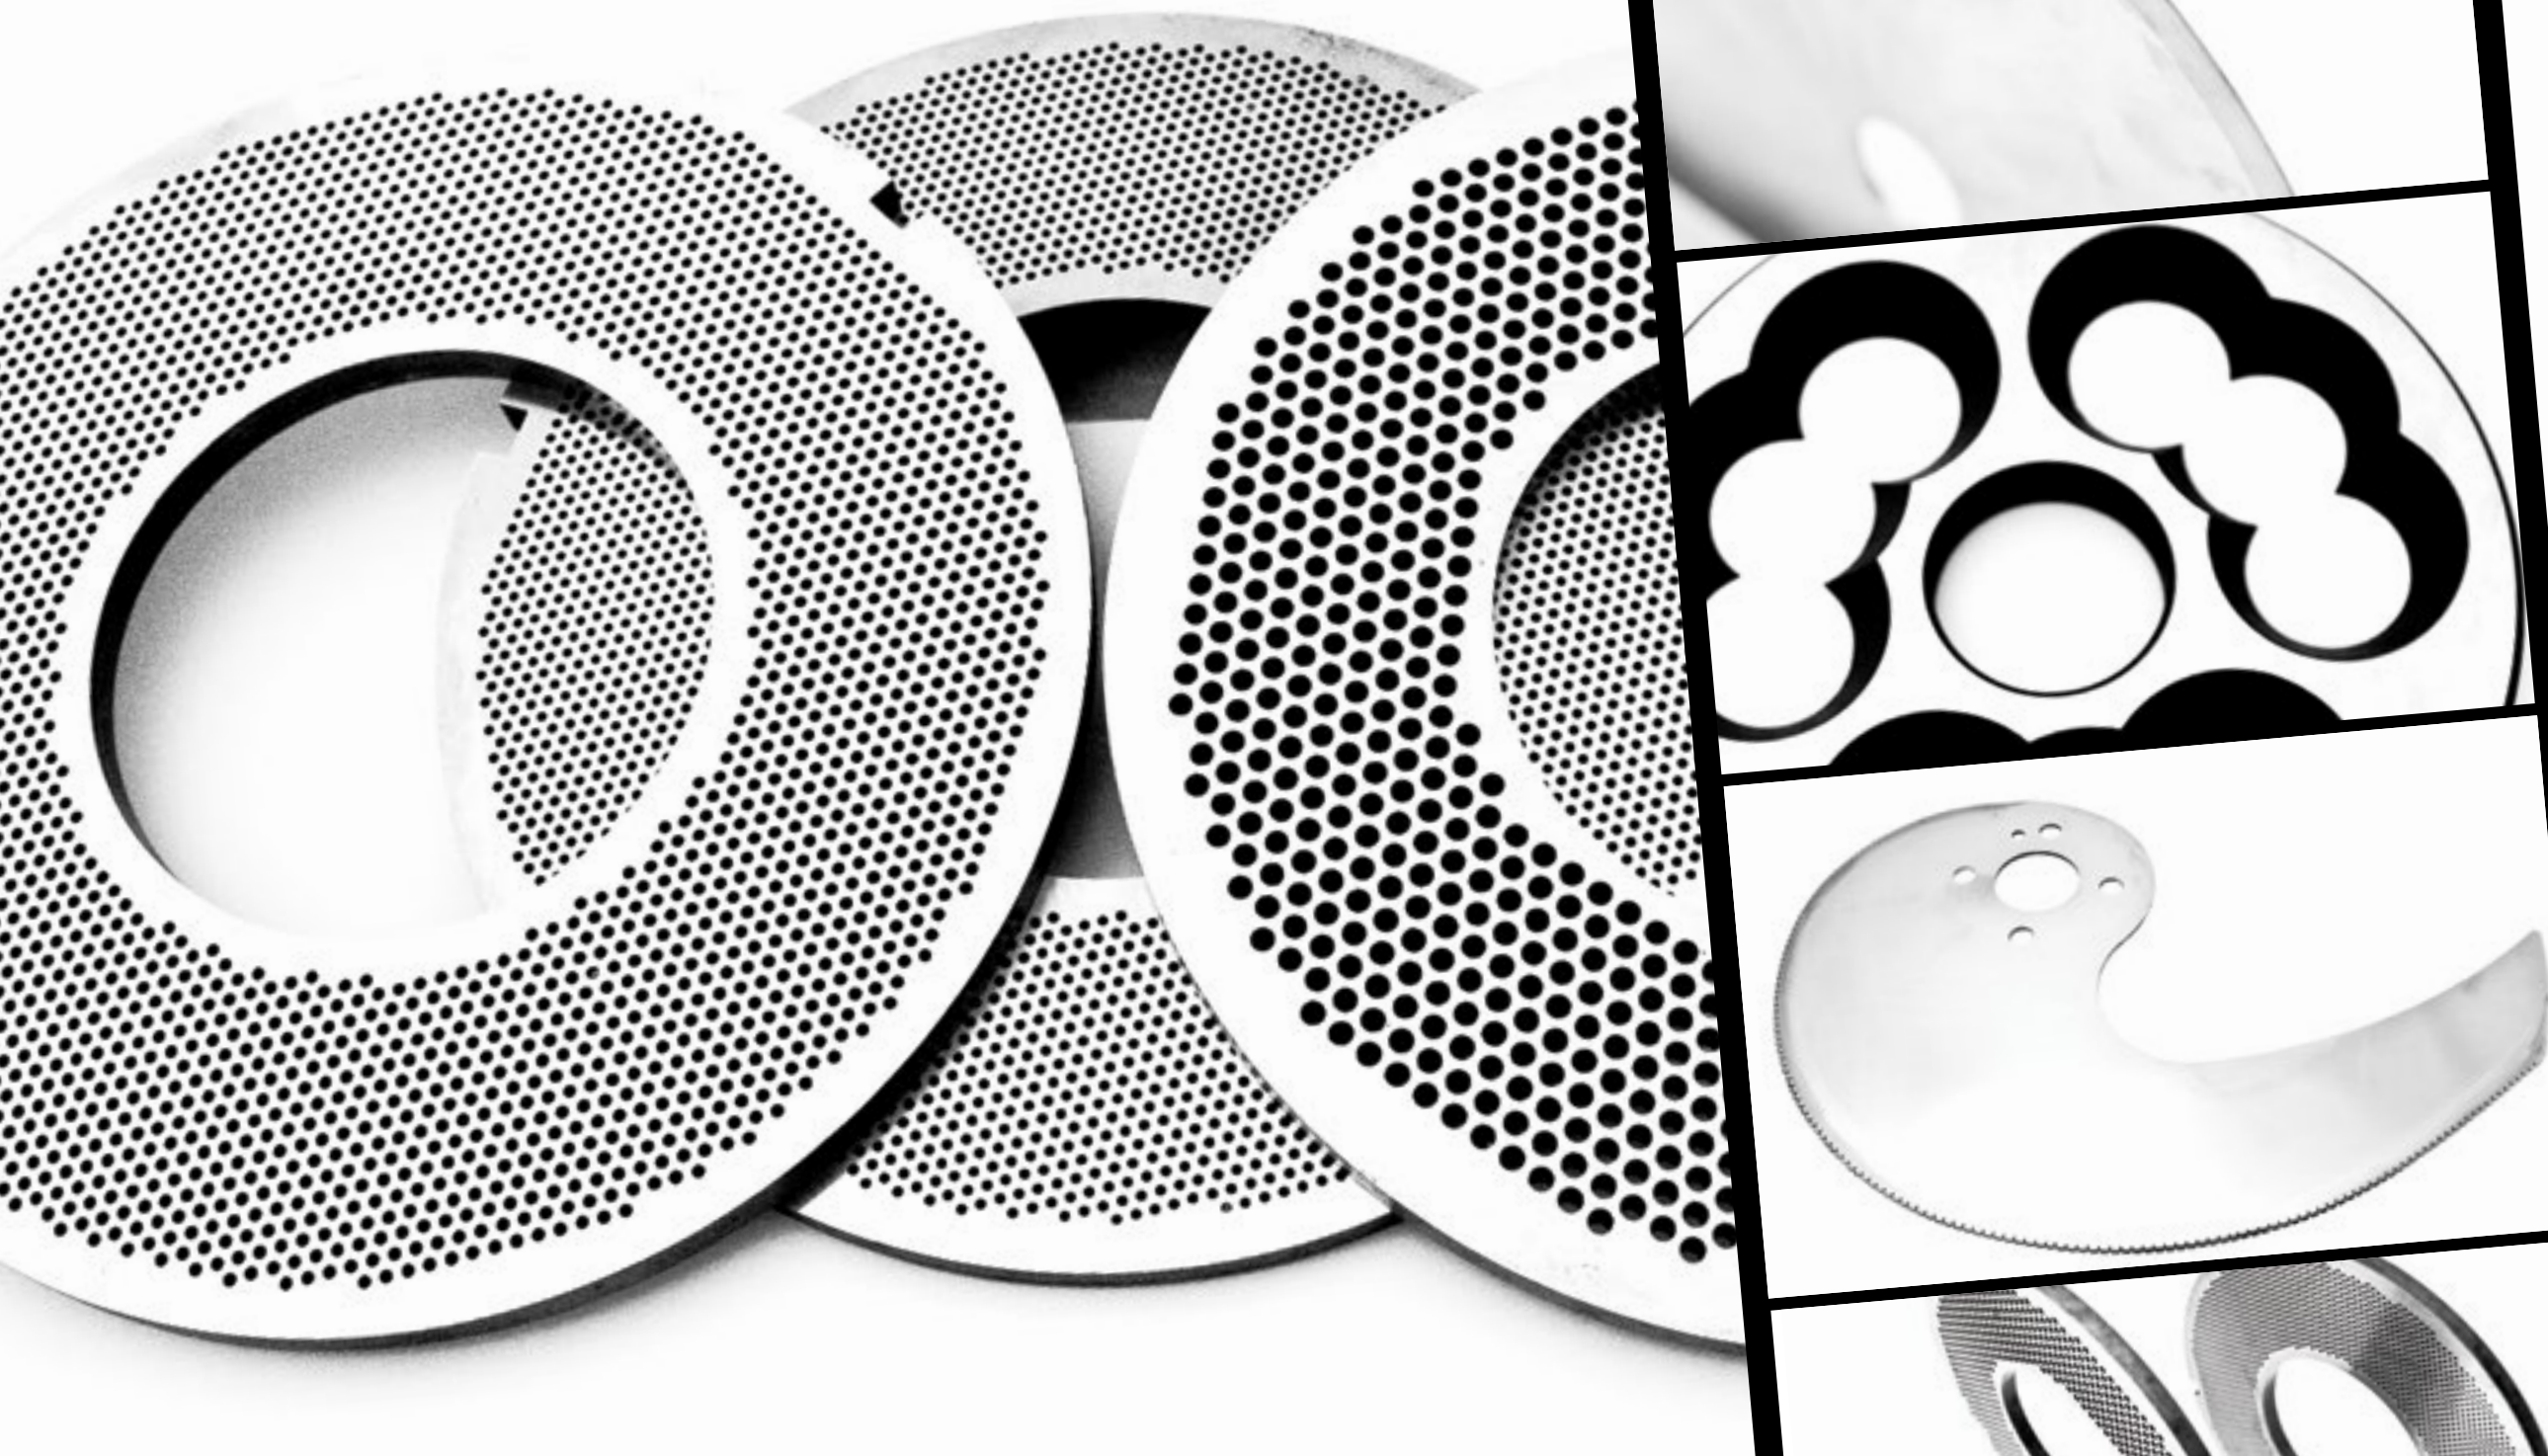

- 1 MACHINE KNIVES FOR WOOD WASTE
- 2 CHIPPER KNIVES
- 3 FLAKER KNIVES
- 4 CANINTER AND SLABER KNIVES
- 5 KNIVES FOR PELLETS PRODUCTION
- 6 ROTOR KNIVES
- 7 STATOR KNIVES
- 8 WEAR PLATES
- 9 HACKER KNIVES
- 10 WOOD BARK PELLERS

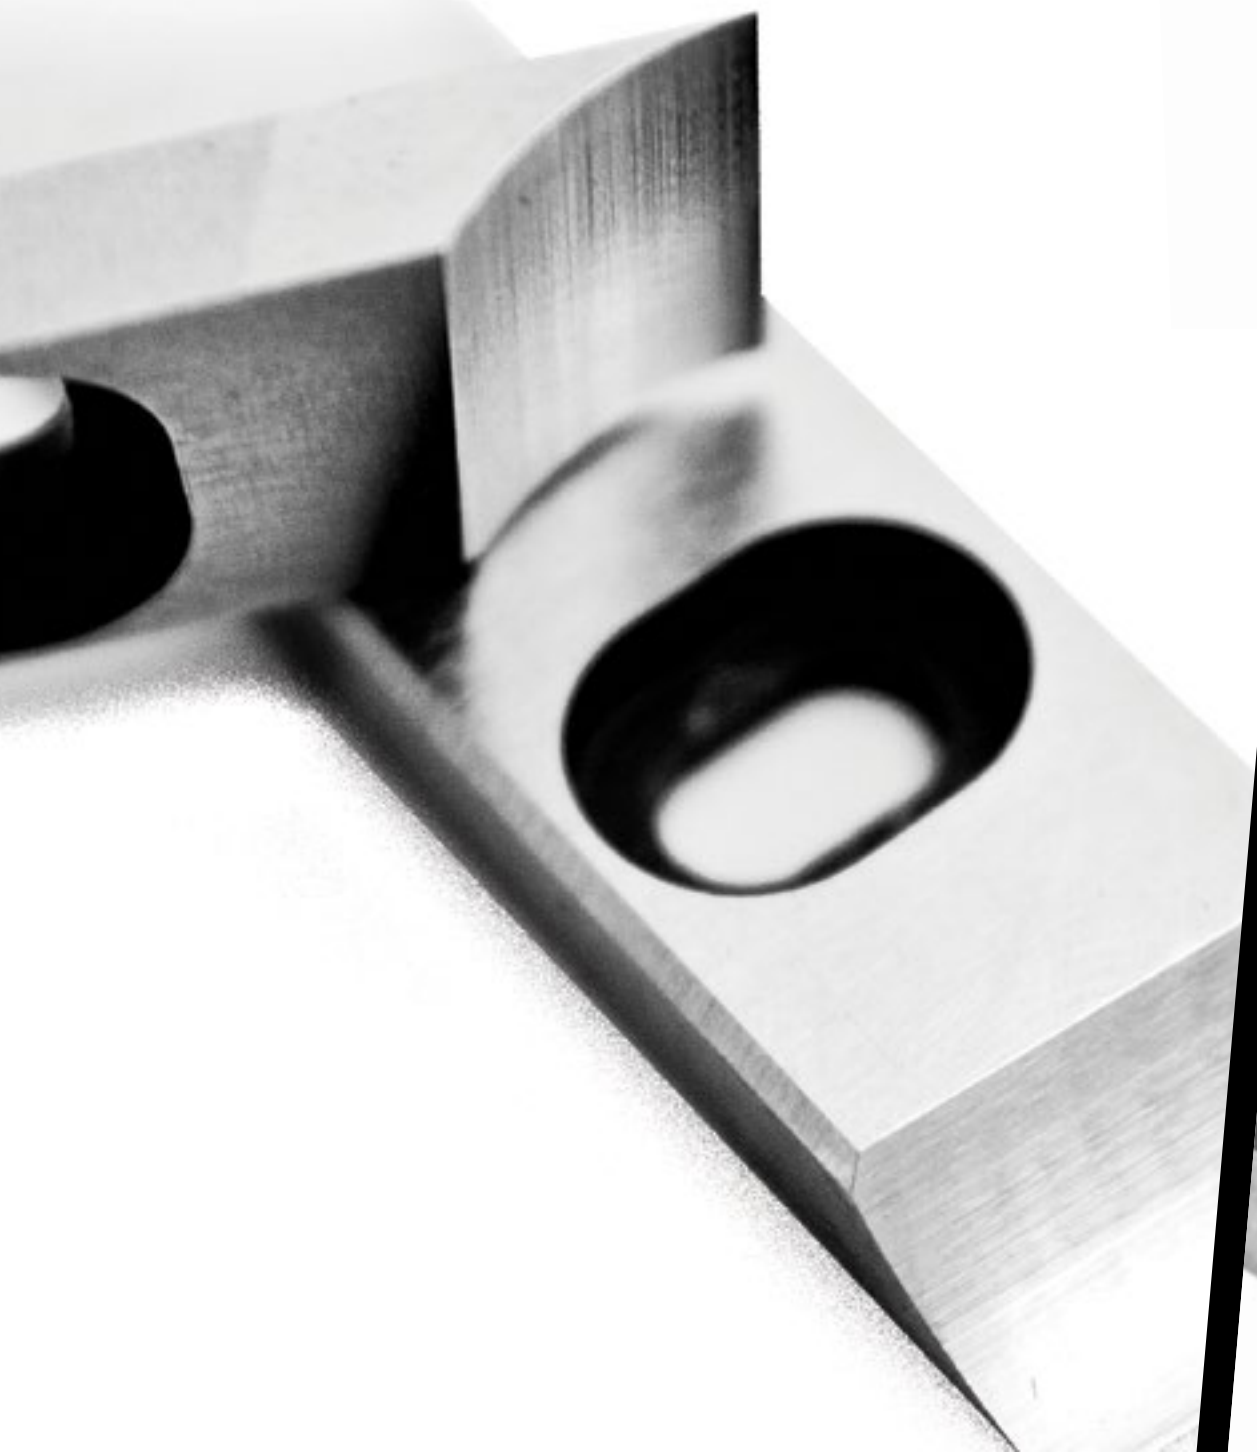

MECHANICAL BLADES IN THE FOOD INDUSTRY

Manufacturing various types of blades used in the meat industry, fruit and vegetable industry as well as in the industry of packing finished products

Considering the specific demands in the food industry, the blades are made exclusively from stainless steel, therefore alloyed steel which have excellent characteristics and meet all requirements in this industry.

MECHANICAL BLADES FOR PLASTIC, RUBBER AND PLASTIC RECYCLING INDUSTRY

- 1 MACHINE KNIVES FOR GRANULATING
PLASTIC WASTE, PET AMBALGE ETC.
- 2 GRANULATOR KNIVES
- 3 STATOR KNIVES
- 4 VARIOUS CIRCULAR SLITTER KNIVES
- 5 PERFORATOR KNIVES
- 6 SHREDDER KNIVES

PERFORATING AND PACKING MACHINE KNIVES

Juranko S.M. industrial knives and blades manufactures several hundred of rotary circular knives and straight flat perforating blades in standard and custom dimensions for all converting industries including packaging, paper, plastic, rubber, film, tissue and paper towel and many others. We can manufacture your perforating blades in standard sizes or with complex tooth forms.

**WE CAN MANUFACTURE YOUR
PERFORATING BLADES IN
STANDARD SIZES OR WITH
COMPLEX TOOTH FORMS.**

**OUR PERFORATING KNIVES
AND BLADES ARE MADE FROM
HIGH QUALITY TOOL STEELS BY
CUSTOMERS DEMANDS OR BY
OUR RECOMMENDATION.**
